The entire heater is cast in one piece, including the draft flue, takes on a uniform temperature and will not crack. Is 24 inches high (exclusive of pipe), and 12 inches in diameter. Has ash pan and grate, and basket, firepot and grate; ALL heavy cast iron.

Will burn any kind of fuel and with proper care will last a lifetime.

One farmer customer will lead to many others. Drop a line for full details.

The Best Way to Sell the Best Hinges

STANLEY'S Hinges in Boxes and Stanley's Hinge Display Cards—the complete Stanley System which we are offering to progressive Hardware men. It makes the selling of Stanley's Hinges a simple matter, avoids all loss of time on the part of customers or clerks, and prevents mistakes.

The Hinge Displays are perfect, full-sized reproductions in natural colors of the various sizes and styles of Stanley's Strap and T-Hinges, Hinge Hasps and "Safety" Hasps. Each display consists of a stout card equipped with eyelets and loop for hanging near your hinge stock. The card is lithographed on both sides and enables the customer to quickly select the hinge required.

The clerk turns then to the adjoining shelves and selects the right box at a glance. Each box is plainly labeled and contains a pair of hinges with just the right number of screws of the proper size. The Stanley box is of the neat, strong, telescope pattern. We originated this style of package for Strap and T-Hinges and have used it for many years for our other lines of Shelf Hardware.

One of the big advantages of this Stanley System lies in the fact that you are handling Stanley's Hinges, for sixty years the Standard of quality in the hardware and building trades. **The average man will trade where he gets the best service.**

If your competitor carries hinges in boxes, a customer will be detained there only a minute or two against the twelve minutes required at your store. It is to your advantage, therefore, not to waste the time of your customers.

Write to Department "R" regarding this time-saving, money-saving system of selling hinges. **We will tell you how you can procure one of these Hinge Displays free.**

Ask for supply of circulars, with your imprint, describing this system. They can be included with letters and invoices to your customers.

Stanley Products have received the Highest Award, Medal of Honor, at the Panama-Pacific Exposition. Our First Medal was received 60 years ago.

UNIVERSAL
Four Heat Electric Grill

FAST	CONCENTRATED	MEDIUM	SLOW
560 WATTS	310 WATTS	250 WATTS	140 WATTS

Boils, broils, toasts, steams, fries and stews—fast or slow as desired, with no wasted heat, as only the actual amount of current required is consumed. This saving in current will pay the initial cost of the grill in no time. For light housekeeping and especially for summer cooking the UNIVERSAL Grill is a most important factor, for by its aid, and without other equipment, innumerable dishes are possible. It may also be used in conjunction with the various utensils found in the average kitchen—percolators, double boilers, small stew pans, etc., and when so used answers every purpose of a small gas or coal range without taking up the space required by either.

The UNIVERSAL Grill will cook an entire meal for two or three persons, right at the dining table if desired.

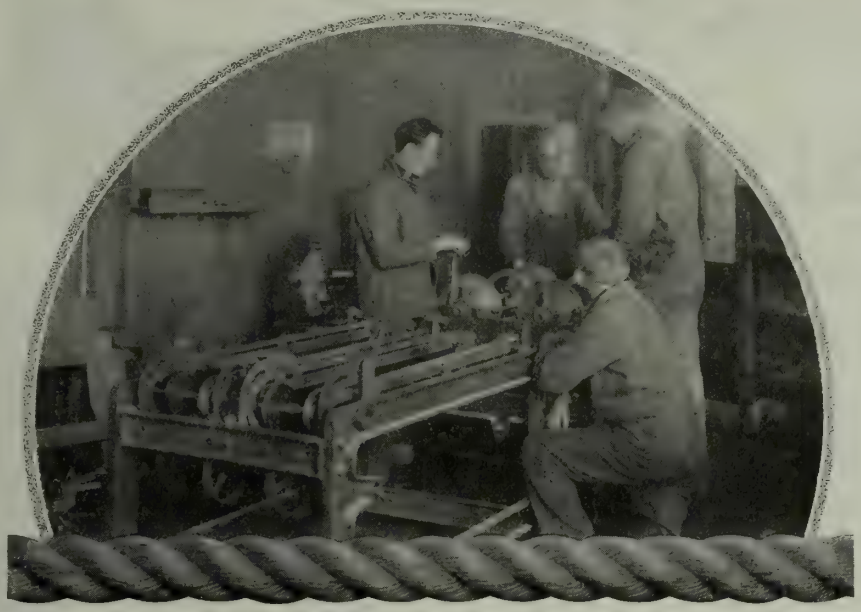
This line will enable you to meet competition and give you a handsome profit. Write for prices.

McGlashan, Clarke Co., Limited

Niagara Falls, Ontario



The Machines That Make Plymouth

Necessity is indeed the mother of invention. Plymouth standards, for example, have demanded and inspired better rope-making machinery.

Our spinning requirement is a yarn of uniform size and strength. No machine on the market would give this result, so we designed and perfected one which would.

To-day it takes nine large spinning rooms to house our equipment on this machine alone — the only type of spinner we use. And good yarn is a big step toward good rope.

Similar high standards govern every other department in our mills. And in every one the particular problem in hand has been solved with equal success.

The means to this end has been a permanent engineering staff of our own, which designs, perfects and assembles all the special devices and special machines that these standards call for.

The result is an all-round equipment, which for size, completeness and capacity to turn out rope of superior quality cannot be matched.

The Maytag Multi-Motor Washer

Announcement Extraordinary!

What the Maytag Multi-Motor Washer Will Do.

It operates the washer and wringer. It will operate the sewing machine, churn, cream separator, food chopper—or any group of small machines—that do not require more than ½ H.P.

Now Ready! Something entirely new! Looks good—"makes good"—sells on sight! Every woman wants one! No competition! Only Multi-Motor Washer on the market!

In short, Mr. Dealer, what has hitherto been considered impossible in washing machine manufacture has been achieved in the Maytag Multi-Motor Washer. The secret is in the light, powerful, compact little motor that is mounted right on the washer—burns gasoline, kerosene, gas or alcohol. Guaranteed for THREE YEARS.

The Maytag Multi-Motor Washer is breaking all sales records for us, so it MUST be selling fast for our dealers.

The price fits the moderate purse, but puts a generous profit in your pocket. GET SOME OF THIS GOOD BUSINESS. Be the FIRST one to supply the demand in your town.

Now, listen! Some live, progressive dealer in your territory is going to make **BIG MONEY** handling the Maytag Multi-Motor Washer—and it might as well be **YOU.**

You positively **CAN** sell this washer and, if you don't, your competitor will—and pocket the profits. Remember, the proof of progressiveness is showing new things **FIRST.** This Washer is the same as our regular Power Washer we have sold for years, except that it has attached under the tub a ½ horse-power, 2-cycle air-cooled engine.

Stanley Tools

Stanley Adjustable Spoke Shaves

These new and improved Spoke Shaves have a Lever Cap fastening the cutter in such a manner as to bring an even pressure on the cutting edge.

The important feature is that the cutter can be quickly adjusted both endwise and sidewise by means of the adjusting screws which engage the slots near the end.

The Cutters are made from a high grade of steel, well tempered and sharpened ready for use.

The handles are japanned and through each a hole is made to enable the owner to hang the tool up out of the way.

Made in two styles—one with raised and the other with straight handles.

No. 151—Raised Handle, 10 in. long, 2⅛ in. Cutter. Per doz. **$6.00**

No. 152—Straight Handle, 10 in. long, 2⅛ in. Cutter. Per doz. **6.00**

TRADE MARK REG. U. S. PAT. OFF.

The Prize-Winning Rods

The Biggest Advertisement Ever Put Out by Any Fishing Tackle Manufacturer.

300,000 copies of this Big Four-Page "BRISTOL" advertisement will appear in March, April or May in Field & Stream, National Sportsman, Outdoor Life, Hunter-Trader-Trapper, Outer's Book, and Rod and Gun.

This will be a regular "Curtain of Fire," as the war dogs say, concentrating such a powerful attack upon the whole fishing fraternity that they will want to start right out on their fishing trip.

11 pages of "infantry" rapid-fire advertisements will follow in each of the above Sporting Journals—every month pounding their "fire" on the ten most popular "BRISTOL" Rods.

A limited number of "Pocket Catalogues," showing these ten "BRISTOL" Rods will be furnished to all "BRISTOL" dealers who will agree to mail them to their customers or prospects.

Window-Posters, Window Cut-Outs, Metal Signs and Brand New Electros for Newspaper Advertising, will also be furnished to "BRISTOL" dealers who will agree to make the best possible use of these expensive advertising materials.

SENT FREE TO "BRISTOL" DEALERS

Send your requisition for the above advertising material at once. This "BRISTOL" advertising will create tens-of-thousands of new fishermen to whom tackle-dealers can sell their lines, flies, creels, lure and our Rods.

All we ask you to do is to CO-OPERATE and get the share that belongs to you. This you can easily do if you get in touch with us and use our store advertising material to connect your store with our National Advertising.

OUR FREE SCALE OFFER

We offer to any consumer-purchaser of a "BRISTOL" Rod, between now and September 1st, 1916, a pair of fine nickel Scales FREE. These Scales are NOT given FREE with "Rainbow" or "Luckie" Rods. We urge all fishermen to buy the rods of you—the dealer. All we ask you to do is to put down the catalogue number of the "BRISTOL" Rod, the date of sale, and the price of the rod, and sign the sales-slip or bill-head and give it to the fisherman with the rod. He will send the sales-slip to us and we will mail the pair of scales direct to him with our compliments. This will create a double interest in buying "BRISTOL" Rods this year. Work with us and you will make double profits by doubling your sales.

Write immediately for the Advertising Outfit mentioned above, provided you will use it properly.

We have also the very latest books on the plumbing and heating problems.

Technical Books, 143-153 University Ave., TORONTO

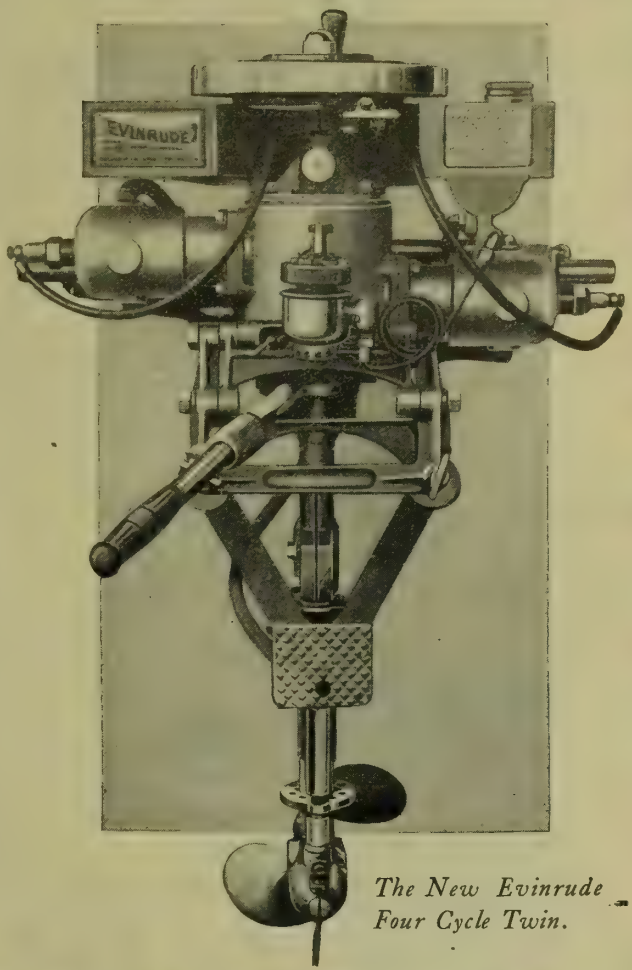
85% GAIN IN SALES

In 1913, the first year the Warner Hardware Company of Minneapolis handled the Evinrude, they made $280 profit. Last year their Evinrude sales brought in $520 profit—a gain of 85%.

This year, with Prosperity in the air, and with the line strengthened by the addition of the new Evinrude Four Cycle Twin, **you** have a bigger opportunity to make Evinrude profits.

There's more speed, more power, in the Evinrude Four Cycle Twin. It combines the efficiency and flexibility of the four cycle principle with the smooth running freedom from vibration of the opposed cylinder design. It develops 4 H.P., driving an ordinary rowboat 8 to 9 miles an hour.

The Automatic Reverse and the Evinrude Magneto—Built-In Fly-Wheel Type—are used as well as all the other conveniences and safeguards of the Single Cylinder models.



The New Evinrude Four Cycle Twin.

In the Single Cylinder, Two Cycle there are several important improvements for 1916 in addition to the features and conveniences you alreay know. There's more speed, and the magneto is entirely insulated and waterproofed, furnishing perfect ignition always, no matter how heavy the rain or how drenching the spray.

Handle your Oils and Gasoline with the

WAYNE PUMP

IT PREVENTS WASTE DUE TO EVAPORATION, LEAKAGE AND SPILLING, AND MAKES THESE GOODS MORE PROFITABLE.

It saves time and labor, as there is no constant filling and handling of measuring cups, and does away with dust and unpleasantness. **Throws a pint, quart, half-gallon or gallon, and measures exactly.**

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts are accurately machined and thoroughly tested, and are interchangeable.

If you are interested in a clean, safe, money-saving way of handling oils and gasolines, jot down a line for full particulars on the Wayne System NOW.

J-M FIRE EXTINGUISHER

The Last Word in "Safety First"

The J-M Fire Extinguisher is deadly to any incipient fire, including fires of gasoline, oil and electrical origin.

Can be operated by opening the nozzle and working like a pump or by keeping the nozzle closed and with a few strokes pumping sufficient air pressure to discharge contents when the nozzle is opened. This feature is invaluable when fighting a fire from cramped quarters.

The J-M Fire Extinguisher has been inspected, tested and labelled by the Underwriters' Laboratories, Inc., and is listed as an approved fire appliance by the National Board of Fire Underwriters.

15% reduction on Automobile Insurance.

Fluid supplied in cans containing sufficient liquid to fill one extinguisher. Trade discounts especially attractive.

Western Firms Add Auto Hardware

Western Canada Firms Taking on Stocks of Automobile Hardware—Rapid Development of a Comparatively New Department of the Hardware Trade—Industry of Large Proportions Now, Only In Its Infancy

AUTOMOBILE hardware is one of the new lines, recently added to the stock of the Sutherland-Stelck Hardware & Implement Co., Ltd., Dauphin, Man.

The new department, along with sporting goods a closely allied line, is in charge of Wm. Sutherland. This firm is typical of many others in both Western and Eastern Canada, who believe that automobile hardware is a line that works in splendidly with the regular hardware stock.

When asked by Hardware and Metal regarding the desirability of stocking auto accessories in hardware stores, and especially in the Sutherland-Stelck store, A. B. Reid, secretary-treasurer of the company, expressed his views as follows:—"We are handling automobile hardware and have found this line goes very well with the regular hardware line. The only drawback is the small margin on tires.

"The hardware store in our opinion, seems to be the proper place for the handling of automobile hardware, inasmuch as many of the accessories are already carried in a regular hardware stock, such as wrenches, rivetting hammers, bolts, nuts, pliers, chisels, files, etc."

"In our opinion it would not pay to carry a line of automobile hardware in any community where there are less than fifty cars. We believe the automible business in this country, large as it is now, is just in its infancy, and it is the policy of this store to carry a complete line and cater to this trade. By doing this our auto accessory business will continue to grow with the growth of the automobile business.

"We carry a supply of tires in stock. We also supply gasoline to auto owners."

The accompanying illustration shows an interior view of the Sutherland-Stelck Co. store. Dauphin, Man., where the store is located is a town of 5,000 population. The firm was originally Sutherland & Stelck, and commenced business in 1897. The business increased from year to year, and it was found ex-

Interior view of the Sutherland-Stelck Hardware and Implement Co., Ltd., Dauphin, Man. A. B. Reid, secretary-treasurer of the company is shown in photo on the left, and Wm. McA. Sutherland, manager auto accessory, and sporting goods department, on right.

pedient to form a joint stock company, allotting stock to the employes who, had been in the firm's employ for a number of years. The company was incorporated three years ago, and the stock is controlled by the active members of the firm.

A little over a year ago the stock and fixtures of the Dauphin Hardware Company was acquired by the Sutherland-Stelck Co., and is still being run as a branch store at the south end of the business section of the town.

The staff consists of nine experienced men, each trying and doing his best to carry out the store's motto "Quality, Service and Fair Dealing."

In addition to a general hardware stock, the company carries bicycles and bicycle accessories, agricultural implements, carriages, automobiles, gas engines, threshing machines, sporting goods.

Going to Add Auto Accessories

J. O. Cadham, Portage la Prairie, Man., is another hardware merchant who believes that auto accessories are closely allied with hardware and that the demand for accessories will continue to grow.

Mr. Cadham has been selling tires and a number of small accessories for some time past, but contemplates going into the accessory business more extensively this year. Mr. Cadham states that there will be many new autos bought in Portage la Prairie and vicinity during the year.

Geo. B. Jameson, Melfort, Sask., has for some time past been selling automobiles in connection with his hardware business. Mr. Jameson intends to branch out into auto accessories this year.

More and more as Hardware and Metal representatives go about the country do they notice an increased installation of auto filling stations and a gradual drift to the logical end—auto accessories.

In most towns by special permit it is possible to place the tank on the curbstone in which case the red pillar of the tank makes a constant and living advertisement. Inquiries elicit the fact that many dealers who in the past have only carried a few of the cheaper and more frequently asked for accessories are now planning to stock full lines this spring. Others who have hitherto neglected the line altogether are preparing to make a modest start.

The firms mentioned in this article are only three of many Western Canada hardware firms, who have added or contemplate adding auto accessory departments this year. Further details regarding the plans of other firms will appear in future issues of Hardware and Metal.

Hardware Firm Contracts for 35 Cars

Hardware Merchant Tells How He Broke Into Auto Accessory and Automobile Business—Expects to Sell 50 Cars in 1916—Hopes to Sell Many Cars to Farmers—Good Roads Help

An authorized interview by Hardware and Metal representative with W. H. Higgins of the Brampton Hardware Co., Brampton, Ont.

BREAKING into the auto accessory business to me was like a second nature. This was a year ago, and now I am taking on motor cars with equal ease.

It was just when the days began to get warm last year that the Brampton Hardware Company ordered some tires and other accessories which we had not already in stock. There are lots of things the hardwareman keeps that may be classed under the heading of motor car accessories. For instance, every hardware store keeps wrenches. Motorists want wrenches. A screwdriver is often wanted by the man with a car. The natural thing for him to do in such cases is to go direct to the hardware merchant. Dozens of other things coming under the same category are found in the hardware store, and only there.

Every Hardware Sells Accessories

There are many merchants who never seem to realize that they could start in this branch by simply ransacking their stock and putting a few articles on a separate table and labelling them motor car accessories.

I have been driving a car now for three years, and nearly every article I have required has come from our hardware department.

There was very little extra outlay in adding the accessories and forming this new section became a source of considerable profit right from the start.

Motorists Prefer Hardwareman

It is surprising the number of motorists who prefer to deal with the hardware merchant in preference to the garage owner. A lady never wants to patronize a garage. She would be subjecting her apparel to injury from coming in contact with greasy and dirty cars. It's bad enough for a man to work his way amongst a lot of machines with dirty wheels and muddy sides. In fact, few men care to be put to this inconvenience just because he needs a spark plug or some other article which might just as well be handled by the dealer in hardware.

Prices Marked on Articles

Another reason why I have found people prefer to deal with hardwaremen is because these merchants usually have the price marked on every article. It often happens that the garage owner neglects to mark his wares. He then resorts to guesswork, and the result is that some customers are charged more or less than others. Then there is trouble, for motorists often talk over the prices they pay for accessories.

With the hardwareman it is different. He nearly always takes care in marking his goods, and then there is little or no trouble from customers, who claim that there is discrimination shown in the prices quoted.

We have a fine big show case just suited for the exhibit of these lines without exposing them too much. This has perhaps added to our success considerably.

Taking on Cars

Now we are going into handling cars, because we feel that it will be a success.

My original line was plumbing. After some years, getting of business became so easy that I felt laziness was taking hold of me with too severe a grip. Then it was that I looked for more scope. I wanted to expand and have something to do which would tax my ingenuity, just the same way as the plumbing business did at the outset.

An opportunity offered itself along the hardware line, and after buying the hardware stock in the adjoining store, I felt like my old self again. I had something to occupy my attention closely. Now the hardware business is working

on a system which requires less attention than when we launched into that branch. This makes me feel that I would like to spread out again, especially after the big success we have had with the accessories.

Up to the present we have kept the stoves and plumbers' supplies in our original store. This store is about 30 feet wide, with two fine windows. It's depth is about twice its width.

To accommodate our new department we have removed our stoves and plumbers' supplies. Most of the stoves are now in the hardware store, while some of the plumbers' supplies have been taken upstairs, where they can be exhibited just as well as on the main floor.

Special Show Room for Cars and Accessories

The big show room will be devoted entirely to motor cars and accessories. It is the best automobile show room in the town, and I think it equals many in larger places.

The car we have selected is the Cheviolet. We have chosen this make because its appearance, mechanism and price appeals to the public. One of the biggest points in fighting for success is the selection of goods that the public want, and especially the class of people you are catering to.

To Sell Fifty Cars

We expect to sell fifty cars this year. We have a contract with the Cheviolet Company for the delivery of thirty-five cars, but with our present outlook it appears as though we will require considerably more than that number.

Hogging the Trade

Some of our friends in the garage business intimated that we were "hogging" the trade. However, they feel better about it now. We explained to them that the Cheviolet Company was bent on having an agent located in Brampton, and that it was better for Brampton garage men to have the new car handled by friends than by strangers.

Our show room is practically ready now, and we expect our first three cars to arrive within a day or two.

The first six cars are already spoken for. We are only able to get three cars in January, three in February, six in March, and ten in each following months.

Repair Shop in Rear

In the rear of our show room we have made provision for a repair shop. Here we intend having a practical man, and will cater for repairs to any car made. No special attention will be given by this department to the Cheviolet. The first car in will always be the first one to receive attention. This department we expect will be a great asset to our new business and a source of considerable profit.

Advertisement by the Brampton Hardware Co., Brampton, Ont., featuring motor cars.

We have never required bank financial assistance in carrying on either our hardware or plumbing business, and when one of the local bank managers learned that we had taken on an agency for automobiles, he came and offered us any assistance that we might require from time to time. This voluntary offer makes me think that the banks realize the possibilities for business in motor cars and especially amongst farmers.

Catering to the Farmers

It is the farmer we are catering to. Cars sold to townsfolk, of course, yield just as much profit, but we feel that if special attention is devoted to selling to farmers more success will be attained.

Farmer Has Money

The farmer has more money to-day than he ever had. His trade is good and if he has invested last year's surplus, his note, bearing interest, is equal to his cheque. Farm produce brings such fabulous prices now that the average farmer only needs to work a portion of his estate to make a handsome living.

Realizes Value of Rapid Transit

Then the farmer is realizing that time is money. He is rapidly coming to see that transportation to and from market or to and from town by the use of horses is expensive transportation. How often it happens that some trivial thing goes wrong with a binder, or some other implement. Perhaps ten or fifteen cents will buy a new part, but two or three hours it spent in hitching up a horse, driving to town and getting back to the field.

This performance makes the cost of repairs high, whereas, a motor car can be started, the run made, the article purchased and the farmer back in his field in less time than he could, under the old system, get started down the road.

The farmer, too, has some pride. He enjoys driving to town, to church, to his neighbors, and for pleasure just like townsfolk do. Why shouldn't he? He is human and likes those things which cater to human propensities. This is the man we expect to meet the most success with.

Methods of Going After Trade

Our method of getting motor car business will be along similar lines to those employed by our plumbing and stove departments. In short, we will get right out after it. The man who intimates that he wants a car or even gets the idea in a vague way, is the man we are right after.

Likes Outside Work

For years I have done most of the outside work. I like getting after business in this way, and feel as confident of making a success of this line of business as I have of the plumbing end.

Our contract with the auto people prohibits other agents coming into our territory. Enquiries from our district made to the head office are forwarded to us. Co-operation of this nature helps to get after the parties who become interested through advertisements or from seeing other people use the car.

Size of Territory

Our territory is about twenty miles square, giving us big scope. The country within our boundaries is rich and I am thoroughly convinced that it is rich soil for the motor car agent with an auto

(Continued on page 52.)

Cardwriting Made Easy

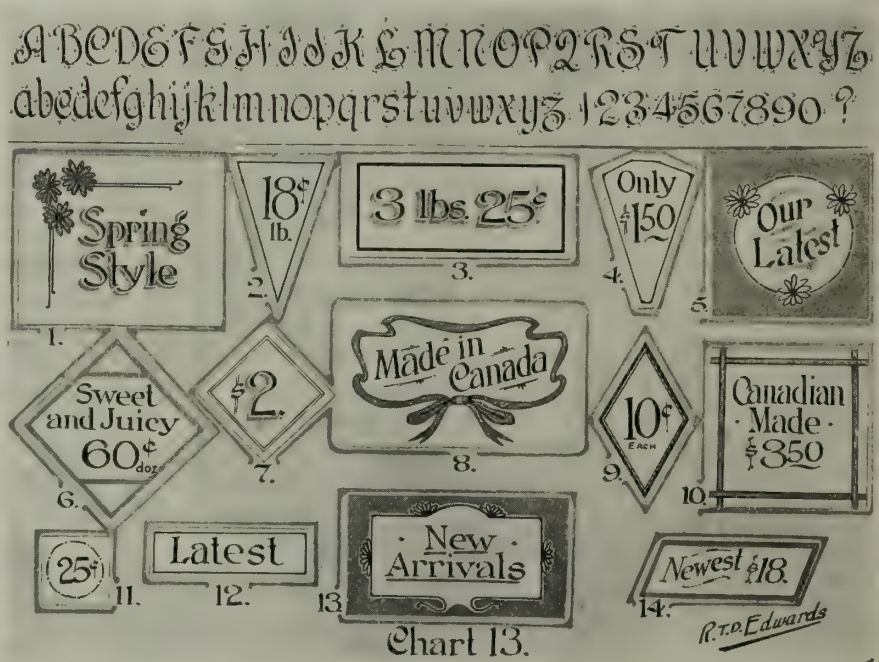
by R.T.D.Edwards

LESSON NO. 14.

MERCHANTS in every line of business are using more show cards now than at any previous time. The value of self-advertising goods is being realized. Appropriate cards and price tickets make merchandise self-selling. They save the clerks' time and the customer can see at a glance that certain articles are selling at such and such prices.

The old idea of using cards only on goods being cleared out at bargain prices is rapidly being discarded and tickets now appear wherever they will draw attention to the merchandise. Suggestion is half the art of selling. Display cards and price tickets always attract, and in attracting suggest. The store with an adequate number of tickets always has the appearance of liveliness.

Appropriateness and neatness go hand in hand or, in other words, they are the essential point to remember when making cards. Whether the card is small or large the same care should be exercised and uniformity should mark every letter. When these few rules are kept in mind the card will doubtless be executed with an appreciable amount of attractiveness.



Instructions for preparing the above cards are given in the accompanying article.

The accompanying samples of show cards were not written altogether, with the idea of the merchant copying them, but simply to show the number of letters of certain sizes fit certain sized cardboards. For instance the "V" shaped card would not do for a motor car salesman to use with the following words: "Only $400 for this beautiful automobile." The word automobile would come at the bottom or smallest end of the card. The samples are simply for suggestions, showing the various styles of letters and the way in which they are formed.

In most cases it is well to use the same kind of lettering for all cards and tickets in the store, This is by no means an infallible rule but will prove helpful to the novice card writer. He will learn the strokes of one style of letter quicker than he will the strokes used in more than one style. Besides this it will give the appearance of uniformity.

Round Pen Writing

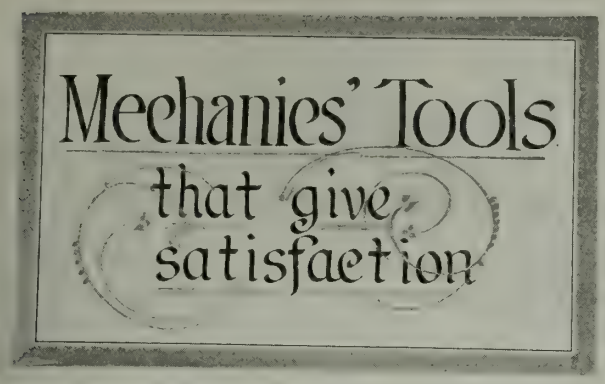
The round pen is, as explained in a former issue, much easier to handle than a brush for making small letters. With the pen you can obtain either a hair line or a very heavy stroke. This is impossible with the brush. The steel pen will always give a much finer line and will spread according to the artist's desire. In the accompanying chart, No. 13, suggestions will be found for small card suitable for many lines of merchandise. All the letters and numerals used in this chart are of the style upon which instruction was given in the last lesson.

The Cards in Detail

Card No. 1 is 4 inches by 5 inches and has a white background. The lettering is shaded with pale green. The floral decoration in the corner is appropriate for the coming Spring trade. The flowers were drawn with a stub pen. The artistic effect of card could be enhanced by coloring the petals either pale pink or blue, using transparent colors.

The "V" shaped card, No. 2, is one which may be used in nearly any store and is especially useful when the card is required to be stuck into the goods on display. The size of this card is 4 inches long by 2½ inches wide at the top.

Card No. 3 is perhaps a more suitable style for most stores than style No. 2. This card is 2½ inches by 5½ inches. When the letters are shaded with pale grey or



Suggestion for Show Card to be used in tool window display.

pale green the plainness is eliminated. The heavy ruling around the card is done with the same size pen as used for the lettering.

Card No. 4. This card is similar in shape to card No. 2. The lettering in this case was done with a No. 2 steel nib and the border was done with a stub nib.

Card No. 5, which is 4 inches square, is made on white cardboard. In making this card, first find the exact centre and then with the aid of a compass draw the circle. Next proceed to sketch the flowers with a pencil. After this ink in the flower. Use black waterproof ink for this purpose. This will be best done with the aid of a stub pen. Then finish the circle with the broken line for the flowers. Color the outer background with a heavy opaque pale green color. This must be applied with a brush. Note that a narrow margin is left between the black ink work and the pale green background. Color the petal of the flowers with a delicate shade of pink. The interior of the circle may be used for any lettering or numerals the merchant may desire.

The letters on Card No. 6 were made with a No. 2 nib and the figures with a No. 1 nib. The ruling was executed with a No. 6 brush. This is a 4 inch square card turned cornerwise.

Card No. 7 is a popular style amongst all classes of merchants. It is a square card and like No. 6 it is turned cornerwise. The figures were done with a No. 1 nib and the border was drawn with a fine pointed pen.

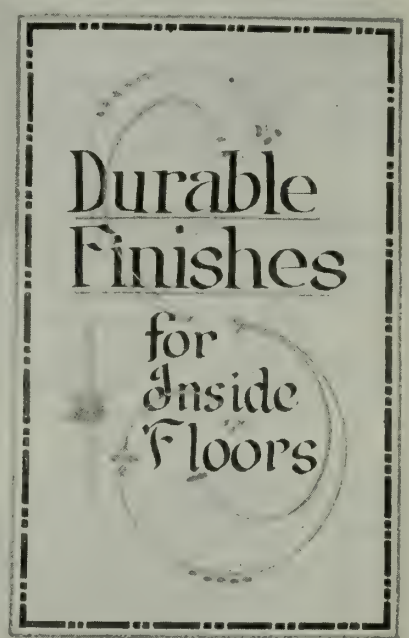
Designs after the style of Card No. 8 are first sketched on thin paper and after being perfected are transferred on to the cardboard by means of carbon paper. The outline should be made with black ink using a fairly fine pen. When this is dry fill in with a transparent ink using a color suitable to the display. If the words "Made in Canada" are to be used, a red ribbon will be quite appropriate. This card is 3½ inches by 5½ inches, a size which cuts economically into the full size sheet cardboard.

Card No. 10. The diamond shaped card is always attractive and can be used for many lines of goods. The heavy border on this card was drawn with the same nib used for the figures. The fine inner line was made with a stub pen.

The border on Card No. 10 was drawn with a stub pen and filled in with red ink. The main point in making this border is to get the effect desired by the overlapping corners. The lettering on the card was done with a No. 2½ nib.

No. 11. This is a card, which may be used in large numbers by the merchant in almost any line of business, is easy one to make. It is simply a square card with the circle first drawn by aid of a compass and then blacked in. The figures are done with a nib. One advantage about these cards is that they can be made in spare time. They always come in useful. The size of the sample is 1¾ inches square.

Cards after the style of No. 12 are considered very attractive. They may be used in many instances where new goods appear for the first time or where slight alterations have been made. They show that the merchant is keeping abreast with the times.



Suggestion for Show Card for window display of Floor Paints

Card No. 13 shows a unique design worked up on a pen lettered card. This is drawn after the same method as card No. 5. The background may be colored to suit any display.

The last card in the sample list is an attractive shape, popular amongst some classes of businesses and of late has been used in nearly every line of trade. Its size is 4 inches by 1½ inches. The lettering and figures were executed with a No. 2 pen. The outline or border is usually done with a pen, though the sample was done by means of a brush.

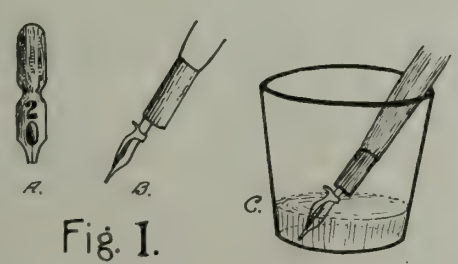


Fig. 1.

Description of pens and their uses given in accompanying article.

New Style of Letters

Chart No. 13 shows a different style of round writing pen-lettering to that illustrated in the last lesson. This is a much quicker letter to make and is termed "unfinished." The name is perhaps very suitable as there are no spurs or finishing strokes. This letter may not be quite so readable as the former style, but it serves as a good variety.

It is hardly necessary to enter into detailed description of the formation of this alphabet. Follow the directions of the arrows and work the pen from left to right and from top to bottom and there will be little difficulty in mastering the style.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, FEBRUARY 12, 1916 No. 7

EDITORIAL BRIEFS

ANYONE who makes a study of the retailing of automobile accessories cannot fail to see that the business is rapidly working into the hands of the retail hardware trade.

* * *

BUSINESS success depends upon many conditions, any one of which may be said to be vital. But of them all, none is more essential to success than the initial proceeding, the art of successful buying.

* * *

UNLESS a merchant takes an inventory, how are insurance adjusters to get at the value of a stock destroyed by fire? When an inventory is taken at the end of each fiscal year and a record kept of goods bought and sold, then the merchant is practically assured of getting what is coming to him. No merchant can afford to take chances with fire.

* * *

THE COLLECTION of accounts is not always a pleasant duty, but it is a necessary one. Allowing debts to continue until they come within the "no good" class has caused the downfall of many a merchant. A man should go strongly after that which belongs to him. He knows that when his own bills become due he has to meet them promptly. He should give his customers to understand the same thing.

OPPOSITION TO MAIL ORDER TAX

THE proposal to place a provincial tax on mail order houses doing business in Manitoba, as outlined in HARDWARE AND METAL last week, has already met with opposition from the departmental mail order store interests, and also from the Grain Growers of the Province. Deputations have waited on the Premier and Provincial Treasurer and expressed their disapproval of the proposed legislation.

Interests representing the mail order houses, and other elements opposed to the imposition of the tax appeared before the cabinet last week and contended that the tax would be unconstitutional.

The spokesman for the interests argued that the tax on mail order business would be contrary to sections 91 and 92 of the British North America Act, which provides that the province may impose direct, but not indirect taxation. He stated that the tax would be an indirect tax, and supported his theory upon the ground that the proposal originated with the retail merchants, some of whom, he claimed, had stated that consumers would be forced to pay more for the goods. In other words, he claimed that the government by imposing a tax nominally on the mail order houses, would actually tax the consumers, as the tax would be collected indirectly from the latter who would be forced to pay more for goods. It was also pointed out that the tax if imposed upon Manitoba mail order firms only, would be unfair, owing to the fact that mercantile concerns in Eastern Canada, and the United States, of whom there are a large number distributing catalogues throughout the West. cannot be forced to pay the tax.

On the other hand it is urged by many retail and wholesale concerns that mail order houses should be taxed. Some wholesalers state that the legislation is directed at the mail order houses who are getting the cream of the country trade. They do a cash business, and farmers, after securing long credit from the local retailer, when they have ready cash will give it to the mail order house in preference to the local merchant. The local merchant pays taxes, and helps in many ways to build up the local community. The mail order house does not contribute in any way to the building up of the rural community, and yet, secures the cream of the business. Under the present parcel post system, the mail order firms are enabled to flood the country with catalogues at a ridiculously low rate.

Many business men are adverse to expressing an opinion, regarding the new bill until such a time as more information is available as to the amount of the tax to be imposed and just what firms are liable. Incidentally the new bill it is understood provides for the taxation of street railways, express companies and banks.

THE COMING BUDGET

IT IS generally expected that the budget will be brought down by the Hon. W. T. White, finance minister before the end of the present month. It is not now thought that there will be any marked changes in the tariff this year. A year ago a war tax was imposed as follows: 7½ per cent. on the general tariff; 5 per cent. on the British preferential, and with a few exceptions, 7½ per cent. on the free list. It was thought a couple of months ago that an additional 5 or 7½ per cent. tax would be imposed, and it is well known for several weeks a number of firms bought heavily from abroad in order to escape the additional tax should it come into effect. Although a further tax is still possible, it is improbable, and the opinion has gained ground that the readjustment of the tariff will be deferred. The present war taxes, including war postage, taxes on financial papers, drugs, railway tickets, etc., will likely be maintained. The taxes on banks, loan and trust companies will in all probability be kept in force, despite the protests, from some of the banks, registered at their annual meetings.

As to new taxation, it is hard to say whether there will be many drastic changes. Rumors of proposed taxes are heard frequently, but must be considered only as rumors. There has been an agitation for a taxation of the profits of concerns making munitions, and the matter is receiving the serious consideration of the Finance Minister.

The Minister a year ago predicted, with his new taxes and increased duties that the revenue for the year would total $150,000,000, and did not calculate upon the basis of so enormous a western crop and resultant prosperity. Judging by the recent growth in the revenue figures the total will be $180,000,000.

The Dominion financial statement for the ten months of the fiscal year issued last week shows an increase in revenue of thirty million dollars. There are still two fat months to come. In addition there has been a decrease in expenditure outside of militia, of some eighteen million dollars.

A large sum for war expenditures for the year will be included in the budget. It is not improbable that another war loan of large proportions will be floated in Canada sometime during the year.

LEAD MARKET FIRM

RETAILERS have been watching with a great deal of interest and concern the upward flight in the prices of lead products, and especially white lead ground in linseed oil. Several advances have taken place lately and there are no signs of a decline at the present time.

The *American Metal Market* early this week issued a report from St. Louis to the effect that the lead market is quiet, but firm, with a fair inquiry for both spot and futures, but comparatively little actual buying, and limited offerings. One of the larger of the independent companies refused to name a price on Friday for March delivery, but offered immediate shipment for 6.02½c, spot cash, for 50 or 100-ton lots.

This company, however, refused to offer round lots even at the latter price. On the other hand buyers are indifferent, and while some export inquiry is reported, domestic consumers appear to be holding off.

The lead ore production is unrestricted but the ore market is not particularly strong. There appears to be little spot lead to offer, but consumers as a rule, are well supplied.

Receipts at this point for the week were much larger than those for the preceding week, and also they were much larger than the shipments. The latter were larger than those for the preceding week but smaller than the shipments for the corresponding week last year.

On Saturday no sales were reported, but 6 cents could have been obtained with sellers holding at higher prices.

The receipts of lead at St. Louis for the week were 56,480 pigs as compared with 41,760 pigs for the preceding week and 33,650 pigs for the corresponding week last year.

The shipments of lead from St. Louis for the week were 39,410 pigs as compared with 33,680 pigs for the preceding week and 40,980 pigs for the corresponding week last year.

OVERCOMING BANKRUPT SALE EVIL

THERE is a movement on foot in Western Canada to overcome the Bankrupt Stock evil. It is estimated there is considerably more than one million dollars' worth of bankrupt stocks reverting into the hands of the Canadian Credit Men's Association each year from failures among stores in the West. The disposition of these stocks is a serious problem occupying the minds of the retail merchants and credit men, and the plan is now under way to establish a clearing house in Winnipeg to which these stocks can be brought, made up into lots, and sold to retailers on the trades sales principle.

The Canadian Credit Men's Association discussed the question recently and passed a resolution asking the board of the association to take the matter up and, if possible, give the method a trial. The Winnipeg Retail Merchants' Association has already expressed itself whole-heartedly in favor of trades sales with regard to bankrupt stocks, and have promised to cooperate with the credit men in any action they may take favoring such a method.

It is felt by wholesalers and retailers that the Credit Men's Association provides the best machinery for handling these trades sales, and that the inauguration of them will result in better dividends being paid to creditors than would otherwise be the case.

Steel Trade in Its Relation to Fencing

A General Review of Existing Conditions in the Iron and Steel Trade of the World To-day—Producing Centers Cut Off—Demand Increasing—Raw Material Scarce and Higher—Prices in Chaotic Condition—Market Sold Out

THE tremendous demands of Europe upon the North American iron and steel industry have seriously depleted some stocks of raw material, absorbed all adaptable labor and in general taxed production to the utmost..

The production of Germany and Austria has been shut off from the world's markets. The former had been one of the chief exporters of iron and steel in the world. The vast iron mines and steel plants of Northern France are to-day in enemy hands, so that roughly two-thirds of their production is dead loss to the Allies. Thus France that was once self-supporting in this product is now a heavy importer, doubly so on account of war.

Sweden exports a certain amount to both the Allies and the enemies of the latter. This exportation, however, is kept below fifty thousand tons a year in order to conserve and maintain in price the high grade ore that the Swedish Denamara mines produce for the making of the world's highest grades of iron and steel. Great Britain, Russia and Italy have all become greatly increased users of steel and iron. Other countries not actively engaged in war have aided the drain on industry by an accelerated manufacture of munitions of war in preparation for it. Thus we have as a net result a greatly increased demand throughout the world, and a partial shutting off of some sources of supply. The onus of the task of supplying this vast demand rests upon North America, chiefly the United States. That country is expanding its industry to meet the increased demand. Canada heretofore unable to care for her own wants is now self-supporting and gradually working into the greater field of exports. The domestic demand is on the whole probably less than in normal times, a curtailment due to war.

War Affects Steel Products

The war demand affects a tremedous and ever increasing range of manufactured steel products, chief among which is the production of touring cars and trucks, particularly the latter, ship building in all its diversified branches, and last of all wire, barbed wire, thousands upon thousands of tons of it in order that our Canadian soldiers and their Allies may live behind its protecting fences.

In addition there are normal ravages of war that must be made good as rapidly as they occur, the building of new bridges, the replacing of destroyed old ones, the vast works of reinforced concrete in replacing destroyed property of all descriptions.

The Increase in Costs

Raw material has gone up in direct proportion to the demand. Roughly it may be said to have doubled in cost. This fact coupled with abnormal demand is the prime cause of the conditions existing in the industry to-day. Labor and overhead and other costs have remained about as in normal times. The sum total has been a continuous series of advances in all steel products of any importance and the end is not yet in sight.

Prices, however, are not consistent nor dependable. In that respect the situation is chaotic. It will be kept so until such time as present contracts expire with United States steel mills. There are a number of these outstanding with a couple of months yet to run: there are some of six months time. Until such time as they do expire the manner and price of the disposal of steel products is one that is entirely optional with the Canadian buyer of the United States mills products. The holder of such a contract is in the enviable position of having his cake and eating it. He may protect his customer and sell on the old market; he may protect himself and sell on the present market. In either case he makes his middleman's profit; equally in either case it is the mill that is the chief sufferer, even more than the consumer when he buys on the present market. Unfortunately, however, these contracts are not always good except in theory. So great is the demand on the mills that in many cases it is impossible to fulfill contracts and even in more cases delivery has been deferred far ahead of eighteen weeks. The proportion of these old contracts that still have some life to run is not known, and any estimate of their total must be very imperfect. But they exist and it is the existence of them that explains why wire nails are being sold to the jobber at an advance of only fifteen cents over the cost of the wire to the mill. With the expiration of these contracts, other conditions being as they are to-day, a price in this country that is based on the then market conditions is thought to be probable.

The whole market in North America may be truthfully said to be sold up from start to finish for five or six months ahead on all classes of iron and steel, with the exception of structural material. This last is in good demand but is not booked up as far ahead as rods, billets, bonds, hoops and sheets. It is a remarkable fact that there are very small amounts being held even for speculative purposes for the reason that material to-day is going into use as fast as it is turned out.

Mills Working at 100 Per Cent. Capacity

There is at the present time a shortage in the rods from which the wire products are manufactured. Rods are a stand-by of the mills. When business is quiet in other lines, the mills work on rods until they pile up far beyond the capacity of the finishing mills. To-day with business at its height there are enough orders to keep the finishing mills busy and use all of the rods they can turn out, which fact makes it hard for the Canadian manufacturer to buy wire rods in the United States to-day. To explain—The mills have a finishing capacity that is about equal to their semi-finished capacity. Under ordinary conditions they can by speeding up their rod and billet mills turn out more of these products than they require for normal needs, and that is the market surplus in ordinary times. But in caring for the abnormal business that they have to-day they have increased their finishing capacity in order to care for all of the rods that can possibly be turned out. They are working at one hundred per cent. of capacity.

All of which goes to show how hopeless it is for Canadian manufacturers to hope to tap the supply. For the supply is non-existent. Competent authorities in the mills and manufacturing industry predict that this condition will last out the war. The market is so sold out, so completely booked ahead that only the offer of vastly increased prices will serve to divert orders from their present channel.

Wire, Chief Article of Demand

The rush of orders is so great and the demand so young that the proportion any one branch of the output bears to the whole is hard to determine but that

wire is one of the chief articles of demand to-day is certain. Aside from the tremendous demand there has been a great curtailment of the industry. Both Germany and Belgium were very heavy exporters of this commodity, the heaviest in the world. Between them they supplied the bulk of the South American trade. This was particularly true of barbed wire production. Belgium had, previous to the war, some of the finest wire mills in the world.

Fencing Should Be Higher

In its relation to fencing a prominent manufacturer has this to say about the situation: "If the wire fencing prices were based on actual market conditions to-day it would be out of the farmers' reach."

Prices on fencing have advanced a great deal in the past year but according to the manufacturer not in proportion to the advance in his raw material. And there is a very strong feeling apparent that they should go up before the fence season opens up in April or May. The bankings to date for this year are slightly below the level of last year, possibly due to advancing prices which have held orders down but the manufacturers as a whole believe the demand will be a normal one and that the farmer is now willing to pay a price that he would not have tolerated a year ago. This as a result of having been educated in war conditions and the cause of price advances. Believing this they are preparing for a heavy demand, as a normal one on top of the low stocks that exist in warehouses should create a heavy demand. And the manufacturers unite in declaring that domestic demand will have the preference with them.

At the present moment the indications are that the manufacturers have the situation in hand and are anxious to protect the dealers and the farmers. There is however, no asurance that theirs will be the decision. The situation may get out of their hands. Such demand as is coming in at present from some dealers is for small lots. The tendency is to hold back and not buy beyond the demands of the present year, the business of which in this line will be well over by June 1st.

Now that the manufacturers have had this opportunity to advance prices gradually and naturally for good reasons which the public understand, the tendency is to keep them there. Although an estimate of what the fall season will be is impossible, the feeling is that the prices will not be dropped to the ante bellum level of two years ago which interested authorities state were unfair and out of all proportion to raw material costs.

HARDWARE CONVENTION PROGRAM

The eleventh annual convention of the Ontario Retail Hardware and Stove Dealers' Association will be held at the King Edward Hotel, Toronto, on Tuesday, Wednesday and Thursday, Feb. 22, 23, 24. The program follows:

(TUESDAY)

1 *P.M.—Meeting of Advisory Board.*

7 *P.M.—Meeting of Executive Committee and Appointment of Convention Committees.*
Reception and Registration of Members.

(WEDNESDAY)

9 *A.M.—Registration of Members and Distribution of Badges in Convention Offices—Second Floor King Edward Hotel.*

10 *A.M.—Opening of Convention in Banquet Hall—King Edward Hotel—Open to Members and Associate Members.*
Reception of Visitors to Convention including Honorary Members and Trade Representatives. Short Addresses.
President's Address.
Report of Executive and Advisory Committees.
Secretary's Report.
Treasurer's and Auditors' Reports.

2 *P.M.—Members' Meeting. Report of Secretary on "Service to Members"—Discussion as to Extension and Improvements in Service. Discussion on Price Maintenance and how to avoid cutting of prices below legitimate profit line.*
Consideration of present law regarding sale of firearms and ammunition, and its effect on the hardware dealer.
Consideration of working of Workmen's Compensation Act in relation to our members.
Receiving Reports of Committees.

8 *P.M.—To be devoted to Question Box, and consideration of Trade Problems—Open to Travellers and Associate Members. (Free and easy.)*

(THURSDAY)

9 *A.M.—Receiving Reports of Committees—Consideration of Tenders on Hardware, Tinsmithing and Heating as per sample specifications furnished and discussion on same.*
Discussion on Proper System of Installation of Hot Air Heating Systems—and how to prepare estimates for same.
Consideration of Methods to Increase Trade Through Use of Parcel Post.
Question Box Session.

(THURSDAY)

2 *P.M.—Election of Officers. New Business. Question Box.*

The manufacturers' stocks are heavy but stocks of raw material are not as heavy as they should be, which means that most of the future production will be dependent upon raw material at existing prices, which in turn means further advances in the price of fencing. To-day some classes of material are selling at a higher cost than in the finished fence, the manufacturers say.

Spelter, so largely used in galvanizing has advanced from a level of 4½ to 20 cents a pound. Many strange and contradictory conditions exist. In some cases ordinary galvanized wire is selling at higher prices than the finished fence both in Europe and in Canada. The former is taking all the barbed wire it can get at $4.05 per cwt. f.o.b. New York. Plain coiled wire brings $3.75 in the same market and higher when the need demands. The wire rods from which the fencing is made were $24.50 per ton before the war. To-day they are $50 per ton, if they can be had. In France they have been known to sell at $90 a ton. The wholesale price of 48 in. high seven wire fencing that weighs 10 lbs. to the rod is 32½c per rod in less than car load lots. The wholesaler's price in small lots to the jobber is $3.55 base per cwt. So the manufactured fence is selling for about 3c per rod less the wholesale price. That is a sample of fencing.

Some wholesalers and manufacturers are quoting prices only to those who demand them and guaranteeing for ten days only. One large company had to refuse a five-thousand ton order at the ruling market price because they could not supply the goods. The feeling still is, however, that the domestic demand will be cared for, but that it must be prepared for higher prices. It is felt that the dealers understand the situation

(Continued on page 43.)

EVENTS IN THE TRADE

Implement Dealers' Convention

The Saskatchewan Retail Implement Dealers' Association held a convention at Regina, February 1st and 2nd. At the opening session they were addressed by the Hon. Mr. Turgeon.

Board of Trade Resolution

The Montreal Board of Trade has passed a resolution calling upon the Dominion Government to appoint a small commission to visit Europe with a view to studying the possibilities there for Canadian trade after the war.

Howland Employes Enlist

Fifteen members of the staff of H. S. Howland, Sons & Co., Toronto, have enlisted for active service as follows:—Thomas Moulds, Robert Quinton, Luke Tomlinson, William J. Hall, George Phillips, Melville Porter, Fred Drewitt, William Quinton, Frank Rice, Walter Malcolm, James Miller, Norman Wray, Alex. Sime, Fred N. Challenger, Ormel Leavitt.

Fire Losses

Brantford, Ont.—Fire did $1,000 damages in the office of the American Radiator Co.

McCreary, Man.—Fire destroyed McPherson's & Anderson's hardware store.

Brandon, Man. — Doig, Rankin & Robertson, Ltd., whose department store was destroyed by fire in January, have secured temporary premises in the Hughes Block, 10th Street, and expect to be opened by March 1.

Gasoline Prices

Owing to the high price prevailing for gasoline, the question of urging the Government to encourage the manufacture of denatured alcohol was discussed at the January 31 meeting of the Regina Board of Trade. The matter was raised by R. M. Moore, who said that similar action was being taken by the Montreal Board of Trade.

Enlarging Plant

The W. H. Compton Shear Company, Newark, N.J., announces that another four-storey factory will be erected adjacent to the present plant. The new structure will have a frontage of seventy-five feet.

Obituary

Winnipeg, Man.—J. D. Burke, of Coleman & Burke, 287 McDermot Avenue, wholesale trunks and bags, died last week in his 54th year. He was formerly in the retail business, and at one time ran a general store at Morris, Man.

Death of J. C. Love

London, Ont.—John C. Love, senior member of the Love Hardware Company, Dundas Street, died at the Hamilton General Hospital as the result on an operation for stomach trouble. The deceased had been ailing for some time.

Mr. Love, before going into business for himself, had been connected with the Page Wire Fence Company, of Walkerville, and travelled for that firm for 17 years. On leaving the Page people two years ago, he bought out the hardware business of J. E. Young, which is known now as the Love Hardware Company.

He was a prominent Mason, being presiding preceptor of the Richard Coeur de Lion Preceptory of the Knights Templar.

Industrial

The Ford Motor Co. will build an assembling plant at Calgary, Alta., next spring. The building will be four storeys high, with provision made for increasing the size later. They will employ 150 men.

During the past few weeks there has been a coal famine all over Western Canada which, coinciding with extremely cold weather, resulted in damage to water pipes, which meant a lot of business for plumbers.

The newly amalgamated Willys Overland Automobile Co. and the Russell Motor Co. have made Regina headquarters for Western Canada, and will erect an assembling plant there.

Business Changes

Moore Park, Man.—J. H. Creighton, hardware, has sold out to C. G. Cram.

Howell, Sask.—L. A. Lafreniere & Son, hardware and implements, have been succeeded by L. Normand.

Wakaw, Sask.—Johansick & Chevalier have been succeeded by J. F. Johansick.

Dunnville, Ont.—Haney & Pringle, stoves and tinware, have dissolved, A. H. Pringle retiring.

McGregor, Ont.—P. L. Souligny, hardware, has sold out to Felix Meloche.

Carberry, Man.—Harvey & Nash, hardware, have dissolved partnership, H. Nash continuing.

R. R. Kinread has taken over the business of Kinread & Steeves, hardware commission brokers, 152 Henry Avenue, Winnipeg. E. C. Steeves has gone East for the winter, but is figuring on returning to the West later in the year. Mr. Kinread will continue to handle Record Foundry stoves, halters, and a number of other well-known lines. He has announced his intention of making a trip through the West either during February or early in March.

Milverton, Ont.—Wm. Finkbeiner, who has been in the hardware business here for the past 18 years, has disposed of his interests in the business to his brother, Otto Finkbeiner.

Personal

Among the early arrivals for the bonspiel in Winnipeg were R. G. Thrower, of Fiske, Sask., and James Sharpe, Manor, Sask.

J. L. S. Hutchinson, second vice-president of the Dominion Board of the Retail Merchants' Association, was the guest of the Retail Merchants of Manitoba last week.

Norman S. Richards, of the Northern Electric Co., Ltd., Regina, has been appointed manager of the sales department of the same company at Calgary. Before leaving, Mr. Richards was dined by his friends at the Commercial Club, where a presentation was made.

J. P. McGuire, who has had charge of the country order department of the Miller Morse Hardware Co., Winnipeg, Man., left Wednesday morning for his home in Halifax, N.S., where he will take a three months' vacation.

Optical Instruments for Inspecting and Testing

Bausch & Lomb Optical Co., Rochester, N.Y., have issued a 32-page catalogue featuring optical instruments for inspection and testing of materials. Those interested will be supplied with a copy upon request.

Early Days of Stove Business in the West

A. J. Taylor, Newly Appointed Manager of The Gurney Northwest Foundry Co., Winnipeg, Recalls Experiences of Twenty Years Ago.

AN important change was made recently in the stove business of the West, when A. J. Taylor was appointed by the Gurney Foundry Co. to succeed W. L. Helliwell as manager of the Gurney North-West Foundry Co., Lombard Street, Winnipeg. Mr. Taylor is an old-timer in the West, and is well known by Western hardwaremen. He was associated with the business in the early days when the firm sent J. N. B. Drewe to Winnipeg to determine what the prospects were there for business. That was in 1898, and in the same year small premises were taken at 155 Lombard Street, which are still standing and look exceedingly small in contrast with their present six-storey building farther down the street.

A. J. Taylor was then quite a young man, and described himself as a general chore boy, working from early morning till late at night, taking care of all household duties, such as sweeping and making bread and biscuits to show what their stoves could do. In those days the travelling staff included J. Hawke, later of the Moose Jaw Hardware Co., who came in every few weeks and told the younger members of the staff tales which made their ears tingle and their eyes ache for a sight of the glorious West and the big things in store. Another member of the staff in those early days was Ed. Jennings.

Later the management was taken over by W. L. Helliwell, who remained in Winnipeg for a good many years, and was recently transferred to the Montreal end of the business. In A. J. Taylor the firm have a man who understands both the West and the stove business thoroughly.

Speaking of the olden days to Hardware and Metal, Mr. Taylor said: "After spending nearly twenty-five years in Western Canada and almost eighteen years with the Gurney North-West Foundry Co., Limited, I have seen a good many changes in that space of time in the country, people and goods. There are hundreds of towns to-day that were not known, heard of, or even thought of, yet which now have the word 'city' applied to them. However, a great many of the old-time hardwaremen have retired, and some have been called away to the great beyond.

"How often have I thought of the struggle of the early days, small crops and big credits, but with a large idea of the future. Those men were big-hearted fellows; they had every confidence in the future, and displayed the qualities that go with the pioneer; and they gave encouragement and assistance to many a one who was down and out, who are to-day the backbone of the West.

"There are only a handful of the old-time travellers that we used to meet, now. In those days there were only a few of us fellows in the business, as the number of towns was not large, and the branch lines few.

"We hear a lot about the accommodation that the travellers have to contend with at the present time. Little do they know of what the old-time traveller had

A. J. TAYLOR,
Manager the Gurney Northwest Foundry Co., Winnipeg, Man.

to put up with when there was only a wayside stopping-place. Quite often, at the terminal of the branch lines, we used to sleep on the train all night—I say sleep, in the summer time, but in the winter time it was a matter of walking up and down the aisle to keep from freezing. And we were not always sure of a meal. Many a time have we carried a few sandwiches or soda biscuits to help us over the fast.

"In those days the only line that had a dining car was the main line, and if we got snow-bound or delayed on the trains, which were often only mixed ones, you can imagine what we had to contend with. Nevertheless, those were real happy days, as good fellowship and co-operation was the keynote of both customer and traveller, and many a lasting friendship was made in those early days."

EMPLOYES HONOR HARRY ASHDOWN AND BRIDE

Winnipeg, Man.—Striking evidence of the esteem in which Harry C. Ashdown is held by the employees of the J. H. Ashdown Hardware Company, Ltd., was forthcoming recently, when he received on behalf of Miss Grace Langlois, his bride-elect, a magnificent cabinet of silver, spontaneously subscribed for by over 500 employees of the company at Winnipeg, Calgary and Saskatoon.

Recently, Harry Ashdown was elected vice-president of the company of which his father, J. H. Ashdown, is president, and this was referred to at the presentation of the superb wedding gift, which took place in the general office of the wholesale department in the presence of the officers and employees of the firm.

A. E. Dykes, manager of the Winnipeg wholesale business, in making the presentation, stated that it gave him great pleasure, on behalf of the employees of the J. H. Ashdown Hardware Company, at Winnipeg, Calgary and Saskatoon, to ask Mr. Ashdown to accept for the young lady of his choice a case of silver as a present. He referred to the esteem in which Mr. Ashdown was held by every employee of the firm, and humorously reminded the recipient that the present was intended for the future Mrs. Ashdown. He concluded by expressing the unanimous wish that health, happiness, prosperity and long life should be the lot of Mr. Ashdown and his future wife.

Harry Ashdown, in thanking the employees and officers for the magnificent present, declared that he was taken aback by the magnificence of the gift so graciously given to Miss Langlois. He said that more than for its intrinsic value and beauty, he appreciated it as an indication of the esteem in which he was held by the employees of the company, and he felt sure that it would be the most highly prized of any gift which his young lady or he himself might receive to mark their wedding day.

On a card accompanying the gift were the words: "Honor! High honor and renown to Hymen, God of every town. "Our hearty wish is that you may enjoy many years of bliss and hapiness. "From the employees of the J. H. Ashdown Hardware Company, Ltd., Winnipeg, Calgary and Saskatoon."

The marriage took place on Wednesday, February 2, of Harry Crouson Ashdown to Miss Grace V. Langlois. The newly-married couple left the same day for Florida, spending a short time in New York and Washington.

Roy J. Armstrong, who prior to enlisting was employed with the Hall Hardware Co., Calgary, Alta., has been wounded, and is now in a hospital in France.

7 Pumps that take the place of 700

The Ready-to-ship line which we are introducing to the trade is entirely new. The success of the original line, which included only 4 pumps, has given us courage to broaden it a little, add pumps to cover a field which the original 4 never attempted to reach. Patented features have been added and the line has been improved in so many ways that without doubt we can offer the best values in well pumps the trade has ever heard of.

Buy your Pumps "Ready-to-ship"

This is the new way. It means that you get better pumps at better prices, get them promptly, you have less stock to carry and you can reach a bigger field than you ever tried to reach before.

7 PUMPS COVER THE FIELD

With the 7 pumps, you can do the entire pump business of the community. You do not have a variety of standards and cylinders to worry over. The BT Ready-to-ship Pumps come to you ready to sell, ready for the well. They are listed and bought and sold like any other staple merchandise. They are the best pumps in the world for the hardware merchant to handle.

THE INDUSTRY REVOLUTIONIZED

We are specializing on these 7 pumps, on turning them out in quantities. Before the Ready-to-ship idea

Beatty Bros. Limited — Fergus, Ontario.

Ready-to-Ship Pumps

BT STANDS FOR B-E-S-T

became so popular pumps were only made in small quantities, as required by the trade, since no manufacturer could afford to keep a large stock of the numerous varieties shown in his catalogue.

But we are concentrating on these 7 pumps. They will be used for 90% of our well pump business. We are making enormous quantities of each of the 7 styles. We have not the multiplicity of varieties to bother with.

Our whole output of each pump is turned out at the one time. There is little waste of time changing from one pattern to another, less spoilage of castings. The men are expert at making them. They are making higher wages. At the same time our labor costs have been cut in two.

LOW PRICES

This, then, explains the low prices.

Everyone knows that when articles are made thousands at a time, each one of them can be produced at less cost than when they are only made one at a time.

The prices we offer on these pumps are marvellous when you consider the increased cost of materials, due to the war, particularly the cost of brass.

And we have told you frankly how we can make such low prices.

This is not a price-cutting proposition. We are not losing money on them. They are the most profitable pumps we manufacture. We are longing for the day when not 90% but 100% of our well pump business will be done with the Ready-to-ship pumps.

SOME OTHER NEW FEATURES

The standard of each pump is larger and heavier than that of any similar pump on the market. There are larger water ways throughout and a larger delivery spout. Another instance; 9-16 and ⅝-inch steel pins are used, whereas the heaviest has always been 7-16.

PATENTED HANDLE SOCKET: This consists of a single, large malleable iron casting, in which the handle is bolted, from top to bottom, and cannot work loose.

PATENTED STEEL CLIP: This is used to make a rigid connection between the reversible spout and stand. It permits the use of the reversible spout, without danger of breaking the handle bearer because of the side strains on it.

ADJUSTABLE STROKES: 6, 8 and 10 inches. Other pumps have only two strokes, 7 and 9 inches.

IMPROVEMENTS IN CYLINDERS

Cylinders are being built on the ready-to-ship plan, with consequent effects on the price. Brass-lined and brass body cylinders have poppet valves. Caps are galvanized. All fittings, in fact, are made of brass or are galvanized. The cage is malleable iron.

WRITE FOR SPRING OFFER

This is a money-saving and a business-getting proposition for you. We can merely outline it in this announcement. We cannot give you here an idea of the splendid offer we are making.

Send for the illustrated booklet that explains our 1916 Ready-to-ship Pump Proposition in detail.

Also get the offer we are making to the trade this Spring.

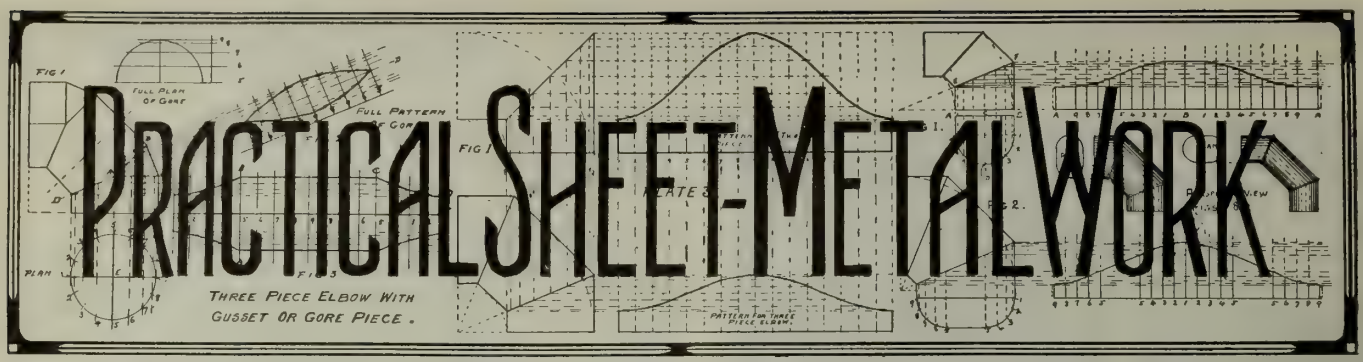
BT STANDS FOR B-E-S-T



BY THOMAS STANFIELD

THIS article will take up a number of simple problems in geometry, which will not only be interesting, but also instructive, in that it shows how various figures may be developed. Such practice will assist the student materially when the actual development of patterns is taken up.

Fig. 1.—To Erect a Perpendicular Line

Let AB be a horizontal line. With A as centre and with AB as radius describe a circle, then with B as centre and with BA as radius describe another circle, cutting the former circle at C and D. Join CD cutting AB at F.

DC is perpendicular to AB. The four angles at F are right angles, 90 degrees each. The line AB is divided into two equal parts at F. And any circle drawn with F as centre is divided into four equal parts by the lines AB, CD.

Another method of erecting a line perpendicular to another given line from a point at the end of that line is shown in Fig. 2.

Take any point above AB, such as C. With C as centre and CB as radius, describe a circle cutting AB at E. Join EC and produce EC to cut the circumference of the circle at D. Join BD, BD is at right angles to AB.

Fig. 3.—To Draw a Straight Line Parallel to a Given Straight Line

Let AB be the given straight line. Take any two points in it, a and b, and from them draw aC and bD of equal length at right angles to AB. Through C and D draw the straight line EF. EF is parallel to AB.

Another practical method is to describe two arcs, as shown with a and b as centres, then draw EF to touch the two arcs at C and D, but not to cut them. EF is then parallel to AB.

Fig. 4.—To Bisect a Given Angle

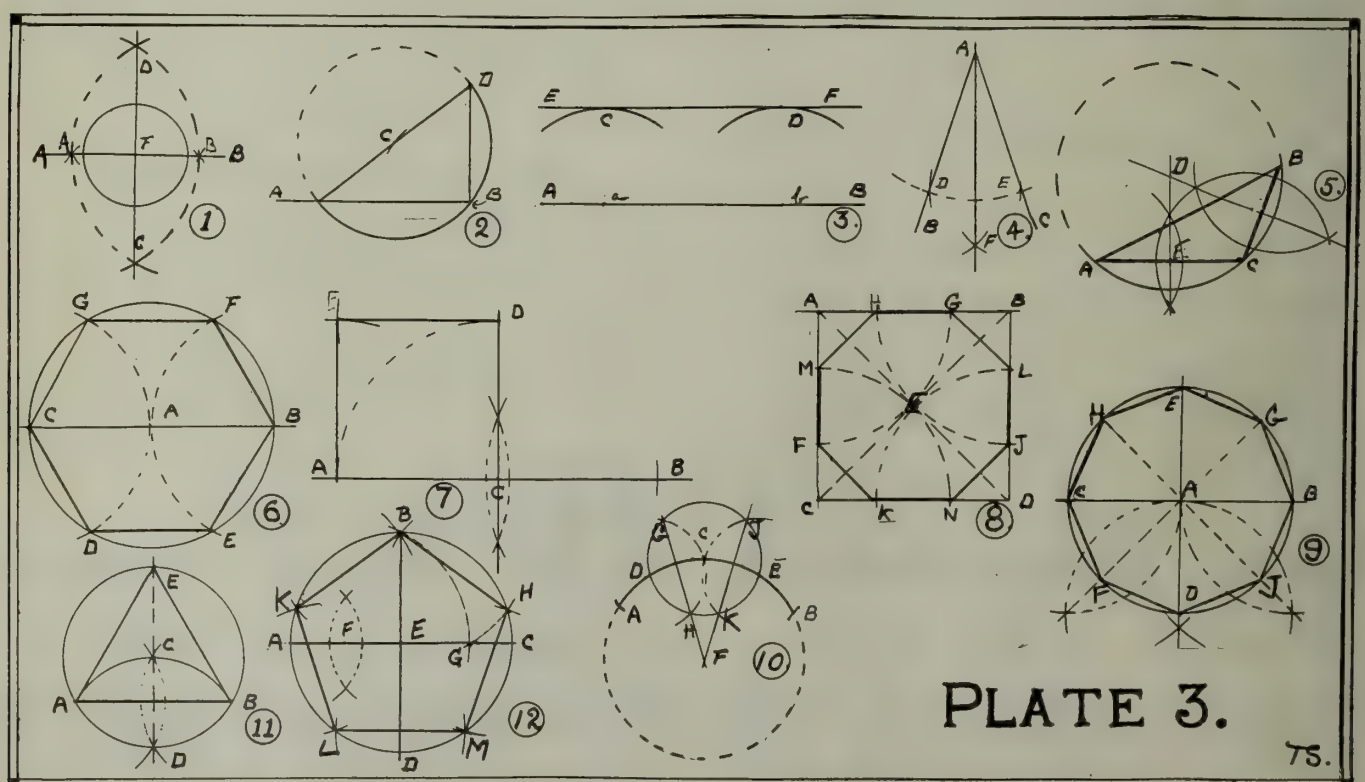
To bisect an angle means to divide an angle into two angles, each having the same number of degrees. It should here be mentioned that the size of an angle does not depend upon the length of the lines forming it, but upon the size of the opening. Thus, the angle formed by the hands of a clock standing at 5 minutes past 3 is greater than that formed by them at 10 minutes past 3, although the hands in the second case might be much larger than those in the first case.

Let BAC be the angle to be bisected. With A as centre and with any radius less than AB describe a circle cutting AB and AC at D and E respectively. With D and E as centres and with radius DE, describe two circles (parts only are shown in the figure) intersecting each other at F. Join AF. The angle DAF is equal to the angle CAF.

Fig. 5.—To Draw a Circle Through the Three Angles of any Given Triangle

Let ABC be the given triangle. It is required to describe a circle of such a size that the circumference may pass through the three points ABC.

Bisect the lines AC and CB (method shown in Fig. 1) at E and F. Draw ED



and FD at right angles to AC and CB respectively, and let these lines meet at D. D is the centre of a circle which will pass through A, C and B.

Fig. 6.—To Construct a Regular Hexagon With Sides of a Given Length

Let AB be a straight line, the length of which is that required for the sides of the hexagon. With A as centre and AB as radius, describe a circle. Produce BA to cut this circle at C. With BA as radius and B as centre, describe a circle cutting the first circle at F and E, and with C as centre and CA as radius, describe a circle cutting the first circle at G and D. Join CD, DE, EB, BF, FG, GC. The figure thus formed is a regular hexagon, whose sides are all equal to AB.

Fig. 7.—To Construct a Square on a Given Straight Line

Let AC be the given straight line. From A draw a line at right angles to AC, and with A as centre and AC as radius, describe a circle cutting this line at E. From C draw a line at right angles to AC, and with C as centre and CA as radius, describe a circle cutting this line at D. Join ED.

Then AEDC is the square required.

Fig. 8.—To Form an Octagon from a Given Square

Let ABCD be the given square. Join AD and CB and let them intersect at E. With A as centre and AE as radius, describe a circle cutting AC at F and AB at G, similarly from B D and C as centres, describe circles cutting the sides of the square at H and J, K and L, M and N. Join GL, JN, KF, MH. The figure MHGLJNKFM is the octagon required.

Fig. 9.—To Inscribe an Octagon in a Given Circle

Let AB be the radius of the given circle and CAB a diameter. Draw EAD another diameter at right angles to CAB. Bisect the four right angles at A by the diameters FAG, HAJ. Join the points CH HE EG GB, BJ JD DF FC. The figure thus formed is the octagon required.

Fig. 10.—To Find the Radius of Any Given Arc

Let AB be the given arc. Take any point C in it and with any radius less than CA or CB describe a circle cutting the arc at D and E. With the same radius and D as centre, describe a circle cutting the first circle at G and H, and with same radius and F as centre describe a circle cutting the first circle at J and K. Join CH and JK, produce them, and let them meet at F. F is the centre of the circle of which the arc AB is a part.

Fig. 11.—To Inscribe an Equilateral Triangle Within a Given Circle

Let CD be the radius of the given circle and DCE a diameter, with D as centre and DC as radius, describe a circle cutting the first circle at A and B. Join AE EB BA. Then AEB is the equilateral triangle required.

Fig. 12.—To Inscribe a Regular Pentagon Within a Given Circle

Let AEC and BED be two diameters of the given circle at right angles to each other, E being the centre of the circle. Bisect AE at F. With F as centre and radius FB, describe a circle cutting EC at G. Then with B as centre and BG as radius, describe a circle cutting the original circle at H and K. BH is one-fifth of the circumference of the circle, as is also BK, and by describing circles from KH with the same diameter cutting the original circle at L and M and, by joining BH HM ML LK KB, a pentagon as required is described.

(Continued in next issue.)

HARDWARE LETTER BOX

Algoma Empire Wood Cook Stove

Wagstaff & Vestrup, Nakusp, B.C.—Kindly let us know who manufactures the Algoma Empire wood cook stove, and also give their agents in Vancouver or Calgary.

Can any of our readers kindly supply this information?—Ed.

Carbo Magnetic Razor

R. A. Wells, Dresden, Ont.—Will you please give me the name of the firm making the carbo magnetic razor.

This razor is made by A. L. Silverstein, of New York, N.Y.—Ed.

Makers of Kraft Paper

Thompson & Sutherland, New Glasgow, N.S.—We would be obliged if you would give us the names of Canadian manufacturers of Kraft paper.

New Brunswick Pulp & Paper Co., Ltd., Millerton, N.B.

Brompton Pulp & Paper Co., East Angus, Que.

Wyagamack Paper Co., Three Rivers, Que.

Lincoln Paper Mills Co., Merriton, Ont.

Most hardware jobbers could also supply you with Kraft paper.—Ed.

Malleable Iron Rakes and Hoes

Stedman Bros., Ltd., Brantford, Ont.—We are are interested to know the name of manufacturers of malleable iron rakes and a cheap line of hoes.

Ward & Payne, Sheffield, Eng.

Eureka Planter Co., Woodstock, Ont.

Welland Vale Mfg. Co., St. Catharines, Ont.—Ed.

Canadian-made Church Bells

John E. Ford, Comber, Ont.—Please let me know of firms in Canada who make large church bells.

James Morrison Brass Mfg. Co., Ltd., Toronto.

Lumen Bearing Co., Toronto, Ont.

Exeter Mfg. Co., Ltd., Exeter, Ont.

L. H. Piper & Co., Montreal, Que.

The Atha Tool Works are located at Newark, N.J.—Ed.

Butt Gauges Which Attach to Chisels

S. & G. Penfold, Guelph, Ont.—Can you give us any information regarding a butt gauge which attaches to a chisel?

Can any of our readers kindly supply the desired information?—Editor.

NEW MOSSBERG CATALOGUE

Frank Mossberg Co., Attleboro, Mass., recently issued an unusually interesting and practical 200 page catalogue featuring the company's products, which includes, wrenches, bells, stamped steel reels, beams and spools, sheet metal stampings, punching and farming dies, special tools and machinery.

The catalogue is splendidly illustrated. In addition to the regular itemized index, a special page has been inserted inside the front cover, for rapid reference. In order to find quickly any division, you roll catalogue slightly toward the right whereupon the dark edge of the division page will appear opposite the corresponding dark block on the first page. The divisions are listed as follows:—adjustable wrenches; bicycle tools and motorcycle wrenches and tools; auto cycle socket wrenches; socket wrench sets and accessories; marine and motorboat wrenches and tools; double-end and single end, engineers, open-end wrenches; demountable rim wrenches and valve grinders; pliers, necessities for Fords. Copies of the catalogue will be mailed

Auto Goggles

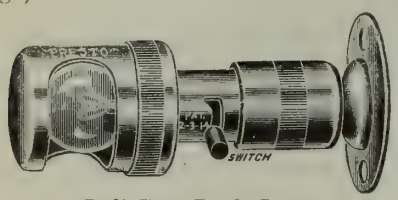
A neat catalogue of 31 pages has been issued by the Standard Optical Co., Geneva, N.Y., featuring Stoco auto goggles. A large range of goggles for autoists is shown in the catalogue. Copies will be supplied on request.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

NO. 618-S DASH LAMP

The accompanying illustration shows one of the seventeen different styles of electric dash lamps for automobiles manufactured by the Metal Specialties Mfg. Co., 730-738 W. Monroe Street, Chicago, Ill.



Bull Dog Dash Lamp

The illustration shows type known as No. 618-S bull dog dash lamp. The makers claim that this lamp is everything that the name implies, short, heavy, strong and chunky and built for service. Made of brass throughout, and handsomely finished in nickel-plate. Furnished complete with electric bulb and screws for fastening to the dash board.

The lamps are made in several different lengths to suit dash board instruments, such as speedometer, clocks, vibrators and pedals.

STOCO AUTOMOBILE GOGGLES

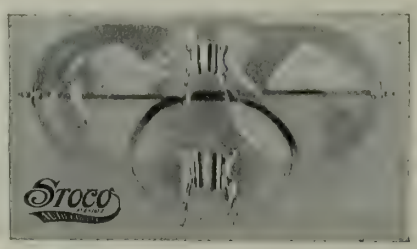
Among the new styles of automobile goggles, recently brought out by the Standard Optical Co. of Geneva, N.Y., are three different types of goggles which are constructed with the Stoco patented flexible gold-filled centrepiece. These styles have pads which rest on either side of the nose, taking the weight of the large lenses off the bridge.

The "Nabob" Goggle

The Stoco rimless goggle, here illustrated, has very large curved amber lenses of the finest optical glass. The temples are covered with a sanitary fabric tubing that protects the ears. The price of this style, each goggle in a beautiful leather case, is $40 per dozen. The "Softone" style is similar, but is made with a lower quality mounting and lenses. The price of the latter style is $24 per dozen, including cases.

In the "Nabob" style, here illustrated, the makers state that comfort, durability and attractiveness have been pleasingly combined. This goggle also has the flexible centrepiece and gold-filled flexible velvet tip temples. The curved lenses are set in protecting rims of either imitation shell or ivory white color. Amber lenses may be had with two shades, the upper portion being made very dark for headlights. Single tone lenses are supplied for this goggle in amber, smoke, fieuzal or amethyst colors. The price, including fine quality cases, is $40 per dozen.

An attractive little catalogue, recently issued by the Standard Optical Co., of Geneva, N.Y., illustrates and describes



Stoco Rimless Goggle

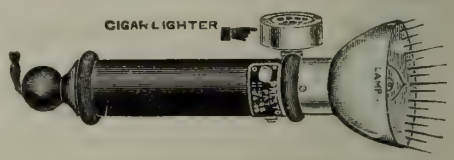
more than a hundred popular styles of goggles, eye protectors and sun glasses, which this company is manufacturing for the 1916 season. There are styles to retail all the way from 25c to $6. A copy of the catalogue will be sent to any merchant on request.

COMBINATION CIGAR LIGHTER, INSPECTION LAMP AND ACETYLENE LAMP LIGHTER

The automobile accessory shown herewith is a combination cigar lighter, acetylene lamp lighter and incandescent repair lamp, made by the Metal Specialties Mfg. Co., of Chicago, Ill. It is now on the market, and the makers state it has proven itself to be a most useful article for automobile and electric vehicles. The lamp is six inches in length, and always at your elbow ready for use.

The cigar lighter tips are made with different resistance wires in same, so that tips are furnished for any voltage from six to twenty-four volts to suit the voltage of the batteries on any automobile or motor boats. The cigar lighter tips are made interchangeable and are easily removed. There are separate push buttons for the lamp and cigar lighter. It is claimed a cigar or cigarette is easily lighted going at any speed. Wind and weather makes no difference.

The repair lamp is also handy for pur-



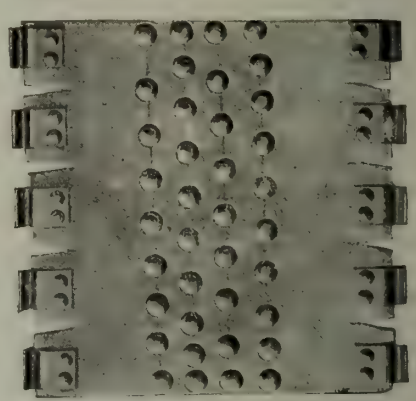
Combination Lighter

pose of inspection, especially for making repairs on the road after dark. The ten feet of cord attached is sufficient for exploring any part of the machine.

AUTOCRAT TIRE PATCHES

The Autocrat Tire Company, Midlothian, Texas, offers to the trade the Atco and Lone Star patches, here illustrated.

The Atco patch is made to be used in either 3 or 3½-inch tires. The makers state that it is made of the best quality leather for the purpose, and has a thin and simple means of locking. The patch, it is said, will repair rim cuts as well as blow-outs at any place in the tire. To apply patch, place around inner tube and insert fasteners through the desired row of slots.



The Lone Star Patch

The Lone Star patch, also made of leather, is eight inches long, with five neat, strong hooks on each side. Each patch is wrapped in a neat wrapper and takes up but little space. Made in all sizes for both clincher and straight side tires.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

The Markets at a Glance

There is a reasonable activity in all branches of the hardware trade and the outlook for spring is exceedingly bright. The feverish buying so prevalent during January is absent this month, thus indicating that on many lines the trade has protected itself against advancing prices. The metal markets are firm. Lead is very high at present, and the market is high.

Heavy snowfalls in various parts of Canada have stimulated business in many lines, and enabled retailers and jobbers to close out many lines of sleighs, snowshoes, bells, etc., which had been rather quiet for some time.

Among the many lines which advanced this week are galvanized iron, brass wire, wire cloth, fittings, stove bolts, game traps, chain, oakum, top soles and top lifts, saws, scales, glue, anvils, some lines of files, seine twine, stove pipe and elbows, scrap metals. Further advances are predicted in black sheets and plates, boiler tubes, copper and brass products. Activity in the paint trade continues and retailers are buying and booking freely in anticipation of higher prices on ready-mixed lines. White lead in oil has again advanced in price. Linseed oil is weaker. The upward movement in chemicals has greatly increased the cost of production of certain paint colors. Glass prices are firm but there is very little business passing at present.

MONTREAL

MONTREAL, Feb. 11.—There is a seasonable activity in the hardware trade, although some of the feverish buying which made January a remarkably big month is missing. This is not regarded as a bad sign but as indicating that the trade has protected itself substantially against advancing prices and is now filling normal needs. Altogether the outlook is very satisfactory as regards business. In connection with the very difficult situation created in the iron and steel trades as the result of heavy consumption for war purposes there is no actual change. But, while the indications are that until there are more free deliveries values of stocks will increase to advance in proportion to their exhaustion, there are future signs somewhat more favorable. Indications from the United States are that mills are now producing in quantities equal to the business coming forward and, although it may take a long time to catch up, the situation there is not gaining in fundamental strength.

Metals in Limelight.—For this week the metals have again come into the limelight with a number of advances and prospects of a continued upward movement. Copper is particularly affected but there are also higher quotations for spelter and sheet zinc and antimony has advanced on nominal quotations. Tin, lead and copper are all very firm, with prospects of the latter continuing its upward movement.

Miscellaneous Lines Advance.—A new feature of the situation is the number of miscellaneous odds and ends of the trade which have been showing higher prices. These are difficult to give in detail to the trade as they are altogether apart from the general lists. Their advance indicates that the influence of the higher markets for iron and steel and other metals is now reaching the outer boundaries of the trade, much as the big splash in the centre of the pond gradually sends ripples to the shore.

Many Advances.—Lines which have advanced this week include: galvanized iron, brass wire, wire cloth, fittings stove bolts, chain, oakum, top soles and top lifts, game traps, saws, scales, glue, anvils, files, seine twine, stove pipe and elbows and certain scrap metals. Advances are predicted in black sheets and plates, boiler tubes, copper and brass products, cartridges etc.

Tin Continues Firm.—The tin situation locally continues steady and firm at last quotations. Local influences in this market have a tendency towards strength but outside sources have recently been contributing information which offsets this. New York is off about a quarter cent since last writing and conditions have been dull and uninteresting. Buyers appear to be very comfortable for early deliveries and with heavy future deliveries the outlook is that the dullness will continue with the possibility of slight reductions. However, it is generally accepted that there will be nothing in the way of a sharp reaction while the present conditions continue. Montreal quotations: 46½c-47c—firm.

Copper Takes a Jump.—The strength in the copper situation reported for some weeks, as the result of the developments in the American market, has brought its effect in a jump of three cents recorded locally this week The metal is now in a very high position but is holding it very firmly with a tendency to advance still further The London market appears to be the chief influence and new records for the sensational movement are being established there from time to time; New York is quiet at last reports but stronger than ever. The question is being asked in the United States as to where the copper is all going but it is evidently not remaining in sellers' hands. Whether consumers are actually using their purchases or are providing a margin against emergencies remains to be seen. Montreal quotation: 30c-30¼c—very firm.

Spelter Scores Advance.—Spelter has scored another advance of ½ cent on the local market and is reported as being very firm at the new quotation. New York shows a fractional advance since last report this being in sympathy with the extraordinary situation in copper. Montreal quotation: 23½-24c—very firm.

Lead is Strong.—Although there has been no general change in the quotations for lead since last report, the market is described as being very strong at the old quotations. Outside markets show little or no change. New York is strong at the Trust quotations. It is believed that a good export business is being done at full prices and in the States spot is demanding a premium. Montreal quotations: 8¼-8½c—very firm.

Antimony Scores Advance.—A nominal advance of 5c has been made on antimony in the local market. This comes as the evident result of the strong movement which has been in evidence in the United States for some weeks and which has been responsible for a rise of about 3½c in New York during the past month. Montreal quotation: 50c—nominal.

Zinc and Aluminum—Still another advance on sheet zinc has been made, the quotation now being 1 cent higher and the market strong on the advance. The new figures are 30c for casks and

30½cents for part casks. There is no change in the market as regards aluminum, the quotation remaining nominally at 68c.

Solder Continues Steady.—There is nothing new to report as regards solder and the business passing is within the range of quotations established some weeks ago. Prices: Commercial half-and-half 27c-28c: Strictly half-and-half 29c-30c.

Iron and Steel Situation.—Although there is no actual change in the situation as regards iron and steel and the products thereof so far as the hardware trade is concerned, and although higher prices are to be expected until deliveries are made more freely as adjustments are made to suit declining stocks, there are some distant signs that the great demand for steel, which was behind the whole movement, is wearing itself out. While deliveries continue from stock, and this appears to be a likely condition for weeks to come, advancing prices are to be expected as the mills are far behind with their orders, however, reports from Pittsburg are to the effect that the situation has ceased to gain fundamental strength and that production is up to the volume of new business coming forward. This is a change which means little to the trade at present but adds a little brightness to the future outlook. Advances on galvanized sheets and tinned iron are announced this week and trade reports are that higher prices on sheets, pipe, tubes, etc., are to be looked for.

Copper and Brass.—With the upward movement of copper the market for brass and copper products is soaring. Advances are being made on sheets, tubes, wire etc. and fittings and other lines are being influenced. Dealers see prospects of being unable to fill orders if the conditions continue as at present.

Galvanized Iron Higher.—A further increase of 25c on galvanized iron in cases is announced and on sheets in bundles there is an advance of 15c. In the former class are Queens Head, Fleur-de-Lis, Gorbals Best and Colborne Crown, and in the latter Apollo and Premier. The advance is the result of the rising cost and scarcity of steel products and still higher prices are being predicted. New quotations follow:

Gauge.	Queen's Head	Fleur-de-Lis	Gorbals	Colborne	Apollo	Premier
14 gauge	$....	$....	$....	$....	$5 50	$5 55
16 gauge	....	....	5 75	....	5 55	5 35
16-20 gauge	6 65	6 40	....	6 15	....	....
18-20 gauge	....	....	5 95	....	5 75	5 95
22 gauge	....	....	6 20	....	....	....
22-24 gauge	6 75	6 55	....	6 25	5 85	6 15
24 gauge	....	....	6 75	....	....	....
26 gauge	7 00	6 70	7 00	6 50	5 95	6 40
28 gauge	7 25	7 00	7 25	6 75	6 45	6 65
10¾ oz.	....	....	....	....	6 75	6 90

Tinned Iron.—The advance on tinned iron which comes with the general upward movement of products of iron and steel is a substantial one, quotations being advanced 50c. Now prices are: 72x30 up to 24 gauge, case lots $11.50; 72x30, 26 gauge, case lots $12.00; Less than case, 25c per 100 lbs.

Sheets Going up. — Although there are no actual advances this week on black sheets, the situation is very firm, and the tone of the market as regards Canada plates is even stronger than at last report. Higher prices in these lines are being predicted in the trade. Dealers say they are largely depending upon stocks to fill orders as they cannot secure deliveries and that advances are forced as supplies become exhausted.

Tubes and Plates.—There are no higher prices announced for boiler tubes and plates but the feeling in the trade is that the top of this market has not yet been reached, although there is some improvement as to the future outlook and less feverish demand on the part of retail dealers.

Nails Are Firm.—On the advances for nails recorded last week the market is steady and firm. The quotation on wire nails is now $3.20, Montreal, and on cut nails $3.10.

Cut Hay Baling Wire.—On the advance on hay wire announced last week there is a readjustment of the discount on Annealed cut hay baling wire, the discount now being 2½ per cent. as compared with 5 per cent formerly. List prices for Montreal are: No. 9, $3.90; No. 10, $3.95; No. 11, $4.05; No. 12 and 13, $4.15; No. 13½, $4.25; No. 14, $4.40; No. 15, $4.65.

O. & A. Fence Wire.—Under the new prices for smooth steel wire announced last week, the new quotations—extras added—for oiled and annealed fence wire are as follows:

O & A, No. 10, $3.46 per 100 lbs.; O & A, No. 11, $3.52 per 100 lbs.; O & A No. 12, $3.60 per 100 lbs.

Brass Wire.—On the higher prices for brass wire the discount on gauges 3 to 24 is net and 10 per cent. as compared with net and on 25 to 36 gauge net as compared with 5 per cent. formerly.

Wire Cloth.—With the upward movement of wire another advance on wire cloth has gone into effect. In Montreal the quotation on 100 foot rolls is $1.75. It is expected that the extra for smaller rolls will be 5 cents as in the past, although this is not yet definitely indicated.

Fittings Going Up. — The prices of fittings are being advanced in a decided manner. The discount on Canadian malleable is now 32½ per cent as compared with 35 per cent. and on malleable unions the allowance is 60 and 10 per cent as compared with 65 and 5 per cent. On brass fittings the advances are even more emphatic.

Stove Bolts Still Higher. — Stove bolts stand out on the bolt list this week, the discount being changed from 75 and 10 per cent. to 75 per cent.

Big Advance on Chain. — Big advances are being made on chain as the result of the rising costs of raw materials. On proof coil there is an all round increase of about 60c per cwt., and there are proportionate advances on the BB and BBB. New prices on about the same scale of increase are also out for Electric weld coil and Electric weld loading. New former prices are as follows:

	New	Former
Proof Coil—		
¼ inch	$7 85	$7 35
5-16 inch	6 50	5 95
⅜ inch	6 50	5 95
7-16 inch	5 55	4 95
½ inch	5 35	4 75
9-16 inch	5 35	4 75
⅝ inch	5 20	4 60
¾ inch	5 10	4 50
⅞ inch	4 95	4 35
1 inch	4 80	4 20
Electric Weld BB—		
3-16 inch	10 45	8 85
¼ inch	7 15	6 15
5-16 inch	5 65	4 90
⅜ inch	4 60	4 05
7-16 inch	4 60	3 85
½ inch	4 60	3 75
Electric Weld Loading—		
¼ inch	11 50	12 50

Oakum.—Further advances are being made on Oakum. Plumbers is now quoted $5.50 which covers a recent of 50 and U.S. Navy (English) is now 8.75 which covers a recent advance of $1.25.

Top Soles and Top Lifts. — Leather concerns have issued a new list on top soles and top lifts. The new quotations for the largest sizes in each class are now as follows:

	Top Soles	Top Lifts
Men's XXX.	$5 70	$1 95
Men's XX.	5 30	1 70
Men's Spec.	3 70	....
Men's X.	3 20	1 00
Men's C.	2 50	0 70
Men's S.B.	3 85	1 15
Men's B.	2 90	0 90
Boys' XXX.	4 00	1 30
Boys' XX.	3 60	1 10
Boys' X.	2 25	....
Boys' C.	1 70	0 55
Women's XXX.	3 20	0 80

Lead Pipe.—Owing to the strength of the lead market, products of that metal are very firm despite advances which have already been made. Quotations are $10.50 for lead pipe and $11.50 for lead waste pipe but higher prices are being predicted.

Poultry Netting Firm.—There are indications that before the end of the season there will be a scarcity of poultry netting and even higher prices may be established. Already the discount has been reduced to 30 per cent. but on this basis the market is very firm.

Game Traps.—The new discounts on game traps have been adjusted in the local market. The allowances are now as follows: Victor 67½ per cent. Oneida jump 60 and 5 per cent.; H. & N. 55 per cent.; Newhouse 35 per cent.; Bear No. 5, $81; Bear, No. 50, $57.

Saws Have Gone Up. — There has been a general advance on saws which takes in practically all of the many varieties carried in the hardware trade.

The change in the discount on rip saws is from 35 per cent. to 30 per cent.

Scales Go Up.—Advances have been made on a number of lines of scales, the increases being from 5 per cent. to 10 per cent. This follows the general upward trend of raw materials.

Glue is Higher.—One of the articles which has not altered in price for many years and has now recorded an advance is LePages glue. The increase is about 5 per cent. roughly speaking and amounts to about $1.50 per dozen on best selling lines. Other glues are expected to join in this movement.

Cartridges to Advance. — A current report in the trade is that there will be a further advance in cartridges to cover rising costs of raw materials. Some wholesalers are advising retailers to cover themselves on their bookings on this account.

Anvils Advance Further. — Further advances are being recorded on the prices of anvils to the trade. One wholesale house reports that an additional cent per pound has recently been added.

Files are Higher.—Cost of manufacture of files is going up as is the case with many other steel products. One wholesale firm reports that the discount to the trade has recently been reduced from 75 per cent. to 72½ per cent.

Seine Twine.—Following the upward tendency of cotton higher prices are being charged for seine cotton twine. One firm reports an increase of 1 cent per pound.

Metal Wares. — Higher prices on sheet iron elbows and patent stove pipe have been announced by the manufacturers. The new discounts are as follows:

Machine made sheet iron elbows 35 per cent.; Galvanized sheet iron elbows 20 and 2½ per cent.; Patent stove pipe 30 per cent.

Old Materials. — Prices offered for scrap continue to advance with the metal markets. Following are new quotations heard this week: Brass, heavy, 12¼c lb.; Copper, heavy, 19½c lb.; Mach. compos, No. 1. 15c lb.

TORONTO

TORONTO, Ont., Feb. 10.—There is no improvement in the situation as regards high prices and deliveries from manufacturers are uncertain and backward. The demand principally for heavy lines of hardware continues steady, however, and the volume of business is as good, if not better, than during last month.

The prosperity in the rural districts is largely the reason for this activity, but there is also a tendency to buy before prices go much higher. Retailers are buying freely, and are laying in fair stocks of staple lines as a protective measure against a possible shortage and abnormal prices, which are expected in the trade. This is due to a large extent to conditions prevailing in the metal markets, where the situation is getting more acute on account of the continued advance in prices and scarcity of raw materials.

The cold weather has stimulated business in seasonable lines and helped the retail trade to clear out stocks of snow shovels, sleigh bells, blankets, skates, etc.

Fewer Price Changes.—There have been a number of price changes recently in less important lines, but not so many staples have been affected as during the past few weeks. The tendency towards higher prices, however, is in no way diminished, and with the present conditions prevailing in the steel trade and other raw material markets, further advances in many lines of hardware may be expected. Price changes this week affect a number of important lines, and include the following: Cold-rolled shafting. "Invincible" poultry netting, stove pipe and elbows, stove bolts, fine wire, wash boards, brooms, scales, weighted brushes, step and extension ladders, copper tacks and nails, escutcheon pins, curry combs, top soles.

An advance in black wire cloth is expected very shortly, while higher prices for hemp and jute ropes are looked for on account of the scarcity and high cost of fibres. Prices of fire pots and torches have been withdrawn, and a new list will be issued shortly.

Iron and Steel.—There is no change in the situation in the steel trade; the market continues strong, and prices have an upward tendency. The hardware market is being affected as much as ever by the conditions in the steel trade on account of the steady advance in prices and scarcity of raw materials. The extraordinary activity at the mills shows no sign of abatement. The advance in cold-rolled steel shafting, anticipated last week, is now in effect, the new discount being 10 per cent. at warehouse. Wire nails are very firm, but may go higher. Wire rods are being quoted at a nominal price of $45 Pittsburgh for second and third quarter delivery, and at $50 to $55 for four to six weeks' delivery.

Stove bolts have advanced, the new discount being 75 per cent. Boiler plates and tubes are very firm, but unchanged.

Metals are Strong.—The feature of the metal market is the extraordinary strength of copper and steady advance to record-breaking prices. There is an enormous demand for copper, and little chance of any abatement while the war lasts. Under prevailing conditions it is impossible to say when the market will stop advancing. The tin market is quiet and unchanged, but the possibility of shipments being lost or otherwise being interfered with is helping to keep the market up. The spelter situation is unchanged, but the market is stronger and prices slightly higher. There is no change in the price of lead, but the market is strong and the metal in good demand. The antimony market is stronger and higher, a scarcity of spot metal having developed. There is no change in aluminum, but the market is firmer.

Copper Very Strong.—The upward movement in copper continues with a strong market. It has been for some time a question of supply and demand, and the point has been reached where consumption is about equal to the production. The demand has reached extraordinary proportions, and will increase rather than otherwise while the war lasts; the copper producers will thus be taxed to the limit to keep pace with the consumption. Copper has advanced locally, and is now being quoted at 29c to 30c per pound.

Tin Reasonable.—The market is quiet but firm, and, compared with other metals, the tin position is a good one. The visible supplies, however continue to increase, which ordinarily would tend to weaken the market. There is, however, the possibility of shipments of tin being lost or restrictions applied which is helping to maintain prices at present levels. Quotations are firm and unchanged at 46c to 48c per pound.

Spelter Higher.—The market is stronger and higher, and the position of this metal somewhat improved. There is a heavy demand for spelter from the brass mills, but the consumption in the galvanizing trade has fallen off owing to the abnormally high price. Zinc ore is being quoted at $110 to $120 at Joplin, Mo. Spelter is higher locally, and is quoted at 22½c to 23c per pound.

Lead Very High.—The market is firm, with a heavy demand, and the "Trust" price of 6.25c New York is being firmly held, but London is slightly easier. The position of lead is a strong one, and no recession in the market is anticipated meanwhile. Lead is quoted locally at 8c to 8½c per pound.

Antimony Up.—The market is strong and higher. The spot market is practically nominal on account of the scarcity of metal available for immediate delivery. Antimony has advanced 2c, and is quoted at 45c per pound.

Aluminum Scarce.—There is no improvement in the situation, supplies still being scarce. The spot market is firmer, but quotations are unchanged at 68c per pound.

Solders.—There is only a moderate demand for solders, but prices are steady and firm. Prices are given in the current market quotation.

Galvanized Sheets Higher.—The market is very firm, and higher prices for galvanized sheets have been announced this week. There is no improvement in the situation, and less than 50 per cent. of the galvanizing plants in the States are in operation. Black sheets are higher and deliveries are getting more backward, while spelter is too high to interest the trade.

Wrought Iron Pipe.—The market is firm at the advance announced last week. The new list is given in the current market quotations. It will be noticed that there are now two price lists on account of the fact that the pipe makers have issued an Eastern list and one for Ontario. The Eastern list covers all points east of Kingston, Ont., and includes Montreal, and also the Maritime Provinces. The Ontario list applies to all

points west from Kingston to Port Arthur, Ont.

Wire Nails Firm.—The market is strong at the advance made last week to $3.15 per keg base. There is a possibility of still higher prices for wire nails, as there is no improvement in the wire rod situation. Wire rods are very scarce and high in price, and will no doubt go still higher on account of conditions in the raw material market. Cut nails are firm at $3.20 per keg base. There has been a certain amount of price-cutting on wire nails by firms who have heavy stocks of nails bought at a low figure.

Wash Boards Advance.—Owing to the high cost of zinc, prices of washboards made up partly of this metal have advanced about 60c per dozen. On this account a new and cheaper washboard has been put on the market, composed of tin plate, in place of the zinc sheet. The new washboard is made up in four lines, which are as follows:—Improved globe, $2.40; standard globe, $2.50; Neptune, $2.50, and original globe, $2.75 per dozen. A complete list of washboards with revised prices is given in the current market quotations.

Ladders, Revised List.—Makers of step and extension ladders have issued a revised list, with higher prices for some lines. Step ladders have advanced 1c per foot. The old price lists for roped extension and common extension ladders have been cancelled and a new list issued covering both lines. The old price lists for fruit picking and single ladders have also been cancelled, and a new list issued covering both lines. New prices on step ladders are shown in current quotations.

Prices on common and roped extension ladders are as follows:

Up to 32 ft.	16c per ft.
34 ft. to 44 ft.	18c per ft.
46 ft. to 60 ft.	25c per ft.
Single and Fruit Picking.	
10 ft. to 16 ft.	12c per ft.
18 ft. to 22 ft.	13c per ft.

Escutcheon Pins Advance.—Prices of round head and headless steel and brass escutcheon pins have been advanced. The new discounts for standard sizes are: steel 50 per cent., and brass pins 15 per cent.

Stove Pipe Higher.—Owing to the increase in cost of raw materials, manufacturers of stove pipes and elbows have advanced prices. The new discounts are as follows:—Stove pipe elbows, black, 35 per cent.; galvanized, 20 and 2½ per cent. Nestable stove pipe, 30 per cent.

Fire Pots and Torches.—Owing to the unprecedented heavy advance in raw materials entering into the manufacture of fire pots and torches, all quotations have been withdrawn. Manufacturers will issue new price lists as soon as possible; in the meantime prices are on application.

Scales, New Discounts.—Owing to the great increase in the cost of iron, steel, brass, nickel and all other materials entering into the construction of scales, manufacturers have been compelled to advance prices. The new discounts are 40 per cent. and 25 per cent., according to grade. The new discounts for the various lines are given in the current market quotations.

Copper Tacks and Nails Up.—Prices of copper tacks and nails included in the revised hardware tack list, issued on January 1, have been advanced $1 owing to the increase in cost of copper. Copper tacks are now quoted at $4.50, and copper nails at $4.30 per cwt.

Weighted Brushes Higher.—Prices of weighted or waxing brushes have advanced, and are now quoted as follows: 15 lbs., $14.63; 20 lbs., $16.78, and 25 lbs., $20.25 per dozen.

Wire Cloth.—Makers of black wire cloth have advanced prices. The new price, which will be announced very shortly, will probably be $1.90 per 100 feet rolls.

Stove Bolts Advance.—Another advance in stove bolts has been announced. The new discount is 75 per cent., as against 75 and 10 per cent. formerly.

Fine Wire Advances.—Prices of fine steel wire have advanced, the new discount being 15 per cent., as against 20 per cent. formerly.

Tin Plates Advance.—An advance in the price of "Alloways Best" standard quality charcoal tin plates. The new prices represent an advance of $1 per box, and are as follows:—IC, $6; IX, $7, and IXX, $8 per box base.

LONDON

LONDON, Feb. 9.—Despite the high prices prevailing on many hardware lines there is a decidedly optimistic tone to business, and the outlook for spring is very bright. Collections are good. The recent snowfalls in various parts of the country have stimulated the demand for many winter hardware lines. A number of price charges have gone into effect during the past week.

Many Price Changes.—Some lines of tapes have advanced 10 per cent. Stove bolts have advanced and the discount for flat and round head stove bolts is 75 per cent. Tire bolts are now quoted at 65 per cent. discount from standard list.

Brass hose couplings and nozzles have advanced during the week. The advances range from 10 to 20 per cent.

Leather soles and heels have advanced during the week. The new prices are 10 to 15 per cent. higher than those previously in effect.

Pointed screen wire cloth has advanced 5 cents per 100 sq. ft. Quotations for 100 sq. ft. are now $1.75 per 100 sq. ft. Rolls of 50 sq. ft. are quoted at $1.80 per 100 sq. ft.

Liquid glue in tins has advanced 10 per cent.

Some hammers and wrenches have advanced 10 per cent.

Scales both platform and for counter use have advanced 10 per cent.

A new shoe finders list, as shown in Hardware and Metal, last week is now in effect here.

Oils, Paints, etc.—White lead in oil has advanced 25 cents per 100 lbs. and quotations are now as follows:— Pure lead in oil in ton lots $11.45 per 100 lbs.; less than ton lots $11.75 per 100 lbs. Retailers have been ordering paint freely in anticipation of the proposed higher prices which are announced to become effective on March 10.

Linseed oil has declined here and the market is considerably weaker. The new prices are as follows: Raw, 1 to 2 bls., $1.02 per gal.; 3 to 5 bls., $1.01 per gal.; 6 to 9 bls., 99c per gal. Boiled linseed oil, 1 to 2 bls., $1.05 per gal.; 3 to 5 bls., $1.04 per gal.; 6 to 9 bls., $1.02 per gal.

Wire goods.—No change has taken place in wire goods since the advances noted in recent reports. Wire nails are quoted at $3.15 base. Cut nails are quoted at $3.10 per 100 lbs.

WINNIPEG

WINNIPEG, Feb. 10.—There has been a very fair amount of business received by the jobbers during the first ten days of the month, but reports from all over the West indicate that travellers are being held up on account of the snow. In some districts there has been no regular train for the last ten days or two weeks, and the only way for the travellers to make time is to drive This would seem to have its disadvantages as a traveller from one of the wholesale hardware houses advised the writer last Saturday that it had taken him five hours to cover a distance of nine miles while driving. From this it will readily be seen why the rush of orders has not yet started, and although business is very good everyone looks for a decided increase when train connections are somewhat better.

Many Price Changes

The past week has seen numerous price changes go into effect, and note is made of same below. Other lines which are likely to be affected in the near future are axes, metallic cartridges, and loaded shells. Manufacturers of the above lines advise that their stocks bought at the old figures are nearly exhausted, and it will cost from 50 to 100 per cent. more to replace them. On this account, it would appear that an increased price would be quite in order.

Canada Plates Higher

One of the most notable advances has been made in the price of Canada plates, the price to-day being 50 cents a box higher than quoted at the first of the year. This change has, of course, affected the price of stove pipes and elbows.

Canada Plate—		
Half Polished	18x21	$4.50 box
	18x24	4.50 box
	20x28	4.75 box
Full Polished	18x21	5.50 box
	18x24	5.50 box
	20x28	5.75 box
Stove Pipe—		
Patent Standard, 6"		$ 9.75 per 100 lengths
Patent Standard, 7"		10.50 per 100 lengths
Stove Pipe Elbows—		
Heavy, 6"		$1.53 doz.
Heavy, 7"		1.72 doz.
Heavy, 8"		2.55 doz.

Nails Go Higher.—A further advance in the price of wire nails has been made of 10 cents per keg. Baled ties also take in increased price of 10 cents per 100 lbs. and plain annealed wire advances 15 cents per 100 lbs. Revised prices on these items are given herewith:

	Fort William	Winnipeg
Wire Nails base	$3 35	$3 75 keg
	Per 100 lbs.	
Hay Baling Ties, 14x9½	$4 05	$4 45
Annealed Wire—		Winnipeg
No. 9	$3 85	per 100 lbs.
No. 10	3 91	"
No. 12	4 05	"
No. 14	4 25	"
No. 15	4 40	"
No. 16	4 55	"

Revised prices on all lines of pipe fittings have gone into effect, some items showing a reduction in price, and others taking a slight advance. Prices as quoted to-day indicate much better the proper selling which these lines should carry.

Batteries Advance.—Batteries show a further increase in price and prices to-day on one line No. 6 in bbl. lots is $31.75 per hundred. There is no doubt many of the retailers will remember that two years ago this line was being sold by them at 25c each.

Other lines which have been affected are given herewith.

	Each.
Tin Plates—	
I.C., 20x28, full boxes	$11.75
I.X., 20x28, full boxes	14.00
I.C., 20x33, full boxes	14.50
Anvils—	Lb.
Peter Wright	14½c
Solid Box Vises—	
45 lb. and over	15c
Bright Tinners' Wire—	Winnipeg.
0-9	$4.15 per 100 lbs.
10	4.21 "
11	4.27 "
12	4.35 "
13	4.45 "
14	4 55 "
15	4.70 "
16	4.85 "

Standard Brass Valves, discount 50%.
Screws, Flat Head Brass, discount 45%.
Screws, Round Head Brass, discount 40%.

	Less ton lots	Ton lots
White Lead, Pure	$12 35	$12 05
White Lead, Special	11 35	11 05

Pipe Goes Higher.—Another advance has taken place in the prices of galvanized and black wrought iron pipe and prevailing prices to-day are noted herewith:

	Black	Galvanized
⅜ in.	$ 3.11	$ 5.04
½ in.	3 87	5 85
¾ in.	4 59	7 20
1 in.	6 75	10 80
1¼ in.	9 18	14 40
1½ in.	10 89	17 10
2 in.	14 67	23 40

Fire Destroys the House of Commons

Canadian House of Commons Destroyed by Fire Last Week was a Magnificent Structure—Business of Canada Going on as Usual—Data Regarding Burned Building

THE Canadian House of Commons, destroyed by fire last week, was one of the finest monuments of Canadian architecture, and was admired not only by Canadians, but by travelers from all parts of the world.

The building was a picturesque landmark. Like the east and west blocks, the House of Commons, which stood in the centre of the group, was built of local sandstone, while the dressings were Ohio freestone. The building stood three stories high, and was 475 feet long. Surmounted by a crown and flagstaff, the main tower stood 160 feet in height. The building stood on a high elevation, and the old familiar crown at the head of the tower could be seen long before the traveler reached the Capital.

The architecture was of pointed Gothic style, and its massive appearance added an appropriate crown to Parliament Hill.

Under the administration of the Macdonald-Cartier administration in 1859 and the Governor-Generalship of Sir Edmund Head, the building of the House of Commons was conceived in the minds of Canada's statesmen.

The question as to where the capital should be became a vexed problem in Canadian politics. Quebec, Montreal, Kingston and Toronto each sought to have the legislators meet in these cities. The matter was finally left to the discretion of the late Queen Victoria, who decided upon Ottawa.

Work was begun on December 20, 1859, and was completed in 1866. In September of 1860 the Prince of Wales, afterwards the late King Edward VII., laid corner-stone on his Canadian visit.

On June 8, 1866, the first session of Parliament was held, thus this year would complete a half century of use.

The cost of the building was in the neighborhood of $500,000, but it was estimated, not long ago, by a large contracting firm, that to erect to-day, a building of the same proportions, similar in architecture and design, with modern interior fittings would cost in the neighborhood of $3,000,000.

Seven lives were lost owing to the rapidity with which the fire spread through the building. An investigation as to the cause of the fire is now under way. Meanwhile, the business of Canada goes on as usual. Temporary quarters have been secured in the capital city, and the representatives of the people of the Dominion are carrying on their parliamentary program, without interruption.

Canadian House of Commons, destroyed by fire last week

WEEKLY PAINT DEPARTMENT

The Sales Wrecker

One Experience in a Day's Journey Among the Small Stores in a Large City Struggling Against Odds—How the Wrecker Killed the Sales.

By NORMAN LEWIS

I WAS out visiting the other day — calling on the hardware and paint stores in a thickly populated section of one of our largest cities.

I was looking for a paint story and happened to drop into a little store off the main thoroughfare, one of a hundred in this city, a nondescript wedged in between a saloon on one side and a second-hand store on the other. The front was so, so, not exactly cluttered up but far from attractive. There was nothing to indicate the tragedy within.

Alone in the Store

I went in, wearily, primed with the motonous question, "How much for a gallon can of Smith-Jones ready mixed?" As I shut the door I saw that I was alone in the place. I gazed absently about me. Things were neat but impractical looking. What was evidently a home-made show case rather detracted from, than added to the display of brushes and dry colors in it. And there were a lot of frou-frous about, cotton trimmings, papier mache decorations and tissue paper fol de rols.

The chandelier had an Elizabethan ruff of curly green tissue paper, I began to think I was in a millinery store by mistake. However, as I looked again I decided that my first impression was unjust in its condemnation. For price cards were much in evidence, also stencilled hints on how to use varnishes and paints, briefly stated in snappy words. There were an unusual number of displays too, and the shelves, however poor they were, and however meagre their ill-assorted contents, were made the most of. It looked like a case of splendid intentions and vile execution.

I scrapped my feet impatiently and made animal noises in my throat. No one came. I performed again. Upstairs I heard a baby's fretful cry and hasty steps. There was a clatter down some stairs and a hitherto unobserved door opened and a neat looking woman, youngish despite a careworn look and some worry wrinkles bustled smartly in.

"What can I do for you, sir?" she inquired pleasantly.

A Good Sales Talk

I had the grace to feel ashamed as I asked the question, "How much for a gallon of Smith-Jones ready-mixed?"

"Three fifty, sir."

"That's high," I said.

"It's all going up and there's been another advance, sir."

"I was offered paint for three twenty-five."

"Smith-Jones?"

"No-o. But they said it was just as good."

"Oh, it can't be," she said ingratiatingly.

"Why, this paint is superior to any in the market, because——." And she laid that paint out on the table, and dissected it and showed me what made it stick. She worked it over sideways, up and down and crossways. Paint ran from her tongue in honeyed argument. She dug in with redoubled vigor when she stumbled onto a good live talking point, like some mysterious thing that was done in the grinding room to make the paint particles smaller, or larger, to hold the colors better—something that was done by no other firm of paint manufacturers but Smith-Jones.

I tried to down her arguments and only got in deeper. She twisted my own argument about on me until my own words were made her own best argument. She was like a lawyer hawk, poised and swooping down on my slightest admission and making it her meat. The woman had me mesmerized.

I didn't really want any paint. But there was no escape. She had inveigled me into stating that I did and that it was merely a case of getting the best for the money, and she had built up a cunning edifice of my own admission that proved her paint to be the candy. I was trapped and she had the paint out and was already deep in a line of superlatively superior brushes that I am quite sure I would have invested in. I saw I was going to have to buy one—I had my eye on a small camel's hair affair that I secretly decided would do for a shaving brush.

The Wrecker Blundered In

And then the wrecker blundered in. He shambled in, coatless, a clutter of soft feathers on his grimy hands, uncouth in his unlovely dishabille, in direct contrast to her wholesome neatness. He had the watery blue eye, the chinless vacuity of an indecisive nonentity. I saw her crumple up under the intrusion. Her air of bright finality in the sureness of the sale gave way to one of pained disappointment.

At the same moment I came out of my trance and got down to cases. The hypnotism stuff was off.

"Whatchawant?"

"I want some paint but I can get it cheaper than your wife asks for this," and I nodded at the redoubtable Smith-Jones. His Adam's apple fluttered in an agony of indecision. I watched it, fascinated by its piston-like smoothness.

"How much 'd she say?" he said, ignoring his helpmate.

"Three-fifty."

"Oh well, I guess mebbe we can do a little better. How much yuh think we'd ought to shade it?"

"Oh, I don't know." I grasped eagerly at this straw that promised to keep me clear of buying some paint I didn't want and a paint brush that my thrifty soul would make me put to facial use.

"Oh, Frank!" the woman cried appealingly.

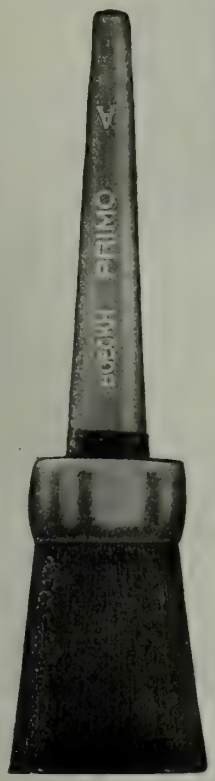
He looked distresed. The Adam's apple ceased its agitation long enough for him to say, "Three an' a quarter?"

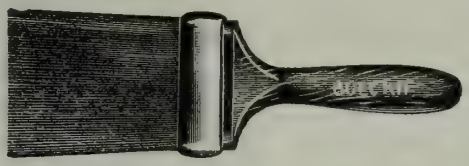
I shook my head. The woman looked at me, distress in her eves. I half turned so as not to see it. He thought I was leaving.

"Three?" he quavered. The man's utter lack of firmness was appaling, monumental.

"Why, Frank, it cost us that." And as he made no answer she slumped down on an unseen stool and fell to weeping, arms outspread on the poor show case and talking brokenly, sob-racked, ignoring my presence.

"You al-always come and spoil my sales." She raised a tear-stained face and addressed him directly, savagely: "Why don't you leave me alone. Stay





There Are No Loose Bristles In

BOECKH'S

Paint and Varnish BRUSHES

Each Brush is put through a special process that removes absolutely all short bristles that are not securely fastened into the ferrule — thereby ensuring that no worry or inconvenience will result from this nuisance so common amongst many other makes. **Boeckh's Brushes are ready for use,** and do not have to be put into a breaking-in process before they can be put in work on a good job.

BE SURE AND KEEP YOUR STOCK WELL ASSORTED

THE BOECKH BROS. COMPANY, LTD. -- TORONTO, CAN.

A Line that Makes Your Paint Dept. "Competitor Proof"

There'll be no chance for your competitors to get any of your paint customers if you sell

JAMIESON'S PURE PREPARED PAINTS AND VARNISHES

because they give satisfaction that is complete. A "Jamieson" customer is a steady one and he turns you the business of his painter friends by his recommendations.

Our proposition is ready to be mailed you. Write for it.

R. C. JAMIESON & CO., Limited, MONTREAL, CANADA

ESTABLISHED 1858

Owning and Operating P. D. DODS & CO.. LIMITED

out there with your chickens. Let me run the store. Why don't you have some backbone? Why are you so afraid of losing a sale? You kill every one. You wreck them. Just wreck them. We might as well sell out as to do business this way. If you're going to raise chickens, raise 'em. If you're going to run a store, run it and cut out the chickens. I can't do everything, but if I've got to," she added with feminine inconsistency, "let me do it."

She rose to her feet. "I'd make a business out of this place if you'd only let me. With your "ands" and your "ifs," and your "buts." She turned with a hopeless gesture, all her brightness gone and walked wearily to the stair door.

I projected my imagination into the vista she had opened up for me by her words. A long course of patient striving, of a sales spirit developed under the most adverse circumstances, struggling against the handicap of this human incubus.

His weak face struggled with his larynx for a smile. He gave it up. He put the cap on his edifice of salesmurder by giving me a direct and negative lead: "Then, you don't want this, mister?"

I agreed with him.

HARDWARE FIRM CONTRACTS FOR 35 CARS

(Continue dfrom page 31.)

that appeals to pocket and common sense.

Good Roads Movement Helps

The good roads movement helps the sale of motor cars. Take Brampton, for instance, good roads are now to be found in almost every direction. The road from Toronto is as pleasant to drive on as any city street. Roads like this add immensely to the comforts of motoring and the more roads there are like this the easier it becomes to sell cars and more cars will naturally be used as the highways are improved.

At the end of our first year in auto accessories we expect to be in full swing not only with accessories, but a car show room and repair shop. Simply a little aggressiveness has given us this success.

STEEL TRADE IN ITS RELATION TO FENCING

(Continued from page 37.)

and can be relied upon to accept it, but that it is to them the manufacturer looks to educate the public and the farmer consumer in the existing situation.

It is stated that fencing can only be sold at the price it is to-day because of the contracts previously referred to and the buying at old prices of present stocks of wire rods, wire and finished fence.

Based on to-day's market price it is said that the wire fence quotations would be eight cents per rod higher than they are to-day.

But back of all this is the old, old cry of price-cutting.

So the situation is this. Some concerns are selling their products at a greatly advanced price over the cost to them; some are selling on a small margin; the price as a whole, high as it is, has not kept pace with the raw material market. A higher price level is predicted by interested authorities who add that once attained, this new level will be doggedly maintained by all concerned.

CARD WRITING MADE EASY

(Continued from page 33.)

Keep the Pen Clean

Too much cannot be said about the proper care of pens. If the pen is to give satisfaction it must be kept clean. It must be washed with the same care that the brush requires. If the ink is allowed to remain on the pen it will dry and corrode, and in that condition it would not allow the ink to flow properly when next time it is in use.

Figure 1C shows a good method for keeping the pen in working order. Keep an ordinary tumbler with just enough water to cover the lower part of the pen nib. This will prevent the ink in the retainer from drying out. Change the water in the glass often. If the pen nib should become dry or corroded, remove the retainer and wash thoroughly. A light solution of lye and water will be found excellent for this purpose.

"A" shows the round writing pen and "B" shows the pen with the ink retainer drawn over it ready for use. There are eleven sizes in this style of pen. No. 1, 1½, 2 and 2½ will be found the most useful sizes, and will prove a good assortment.

ADDING STOVE DEPARTMENT

Wood, Vallance, Ltd., wholesale hardware merchants, Winnipeg, have taken over the exclusive agency for Moffatt's coal and wood ranges, stoves and heaters, for Ontario, west of Fort William, Manitoba and Saskatchewan, and are carrying a stock of these goods, as well as repairs. This new department has been placed in charge of W. E. Davison, formerly with the Moffatt Stove Co., Winnipeg. When the transfer was made early in the year, T. L. Moffatt, secretary of the Moffatt Stove Co., came to Winnipeg and addressed a gathering of Wood-Vallance travellers, posting them thoroughly on the new lines.

In addition to Mr. Davison, the firm have appointed a special stove salesman, D. S. Morris, who will call on the trade, in addition to the regular staff of travellers, thus covering the ground thoroughly.

WEEKLY PAINT MARKETS

(Continued from page 54.)

remain so owing to the heavy demand for lead.

Gasoline Strong.—Canadian crude oil advanced 5c recently, and is now quoted at $1.98; higher prices are, therefore, expected for gasoline in the near future. There is no improvement in the situation, and the scarcity will no doubt become more serious as the season advances, owing to increase in consumption. Gasoline is quoted at 28½c, and benzine at 28c per gallon.

Mixed Paints Firm.—The demand for ready-mixed paints has improved since the proposed advance in price was announced. The improvement, however, is largely confined to the country trade, where conditions are more favorable and spring bookings continue satisfactory. Buying in the city is of the hand-to-mouth order, and the aggregate is not heavy. There appears to be a possibility of the proposed advances being increased before going into effect.

Glass is Firm.—Prices are very firm, but business is quiet. Glass manufacturers in the States control the situation, and they are expected to raise their prices again. At the present cost of glass there is practically no profit for the jobbers. A scarcity of plate glass is reported.

Putty Dull.—The market is firm and trade dull. Although the cost of raw materials is high, no change in prices of putty are expected in the meantime. The following prices are being quoted for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, in casks	$2.65
Bulk, in 100-lb. drums	2.85
Bulk, in 25-lb. drums	2.95
Bladders, in barrels	3.25

Pure putty, 70c per 100 lbs. advance.

NEW INCORPORATIONS

The Manitoba Steel Foundries, Ltd., Winnipeg, has been incorporated with a capital stock of $100,000, to manufacture machinery, steel, etc.

The Pembroke Ironworks, Ltd., has been incorporated at Toronto, with a capital of $100,000, to do a general foundry and machine shop business at Pembroke, Ont.

The Perkins Glue Co. has been incorporated at Ottawa, with a capital of $40,000, to manufacture vegetable and other glues at Hamilton, Ont.

The Canadian Rock Drill Co. has been incorporated at Ottawa, with a capital of $50,000, to take over the Canadian business of the Denver Rock Drill Mfg. Co. The head office is at Toronto.

The Ontario Machine Co. has been incorporated at Ottawa, with a capital of $100,000, to carry on business as mechanical engineers, iron founders and manufacturers of munitions. The head office is at Toronto.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Feb, 11.—Activity in the paint trade continues and the week has emphasised the fact that, in order to take advantage of the present low prices prior to the announced advance to go into effect on March 1st, both country and city retailer dealers are doing their spring buying earlier than usual. Also there has recently been a better tone in the industrial market with a slowly reviving demand from manufacturers of agricultural implements. The tone of the market continues strong and still further advances before the opening of another selling campaign are not improbable.

New Development. — In addition to changes covering white lead and linseed oil—another increase for the former and a reduction for the latter—a new factor has been injected into the situation by a marked upward movement of chemicals. The cost of production of chrome yellows and blues is being materially increased by this movement, while big increases in the prices prevailing for lamp black with a distinct scarcity of that material are affecting the manufacturing prices for various blacks. However, with the exception of a few items in blues, yellows and blacks, quotations to the trade on dry colors or colors in oil will generally remain steady until the first of March when it is proposed to make a general readjustment covering the higher cost of certain chemicals, etc., as well as the increased price of linseed oil.

White Lead Still Higher.—Still another advance has been made in the price of white lead in oil. This amounts to 25 cents and raises the quotation on ton lots to $11.35 with an additional 30c for smaller quantities; this basis compares with a ton quotation of $8.20 at the outbreak of the war and is an indication of the higher cost of raw materials with which the paint manufacturers have had to contend. The higher prices recently have indicated the movements of pig and dry white lead markets and, as indicated in these reports last week, the last advance was not a surprise in view of the position of raw materials. In fact reports still indicate that there is not yet a normal spread between cost and selling price and that another increase may be decided on; however, an easier feeling in the oil market may offset this tendency.

Linseed Oil Easier.—With a further reaction in the flax market, making a decline of about 12c in the past two weeks, lower prices are heard for linseed oil. The result is that there is again created an unusually wide spread as some houses are holding to the quotations given at last report. Thus while one firm makes a cut of 6 cents to $1.00 and $1.03 for raw and boiled respectively, another still holds to the basis of $1.06 and $1.09 although early adjustments are indicated. Other firms are unchanged in their prices of $1.03 and $1.06. Therefore, the range extends from $1.00 to $1.06 for raw and $1.03 to $1.09 for boiled but the bulk of the business is being done between $1.00 and $1.03 for raw and $1.03 and $1.06 for boiled. Usual allowances are made for quantity orders.

Gasoline and Benzine Firm. — The market quotations for gasoline and benzine are unchanged but continue strong with prospects of higher prices in sympathy with the American market. The demand is fair but little activity is expected at this season of the year. Quotations are as follows:

Gasoline, in barrels	29c
Gasoline, in drums	26½c
Gasoline, tank wagon	26c

Benzine 1c lower.

Glass and Putty. — The glass situation is very firm although the business passing at this season is naturally limited. Putty is steady at the following prices:

Bulk in casks	2.55
Bulk 100 lb. drums	2.75
Bulk 25 lb. drums	2.85
Bladders in bbls.	3.15

Pure putty 70c advance above these figures.

Turpentine —There is no change in the turpentine situation. Quotations heard in this market of 82c to 84c the gallon and no indication of any material movement in the immediate future.

TORONTO

TORONTO, Ont., Feb. 10.—Another advance in white lead in oil caused some excitement in the paint market, following closely on other advances of recent date. Manufacturers of white lead, however, are in a difficult position, as pig lead is high and the market firm.

The linseed oil market is steadier, and last week's quotations have been maintained.

The impending advance in ready-mixed paints has stimulated business in the country, but in the city buying is hand-to-mouth, and light stocks only are being carried. In the country careful buying is the rule, as the situation in the market is somewhat uncertain.

Linseed Oil Steady.—The market is steady at the lower level reached last week and prices are unchanged. The situation, however, contains an element of interest, as the outlook is decidedly uncertain, and it is difficult to predict what will happen during the next two months. Although there is comparatively little business doing now, an improved demand may be looked for next month; at the same time, the importation of Argentine flax seed into the States will affect the seed market in Canada. If Argentine seed eventually reaches this country the effect will be more pronounced. The market at Winnipeg is slightly weaker, but comparatively little seed is coming East.

The present price of oil is generally considered to be more nearly its value, considering conditions prevailing, and indications point to a steady market for the next few weeks. The range of prices has narrowed down considerably, although a shade lower figures are being quoted in one or two instances.

The following prices for oil are generally being quoted in Toronto:

	Raw.	Boiled.
1 to 2 barrels	$1.02	$1.05 per gal.
3 to 5 barrels	1.01	1.04 per gal.
6 to 9 barrels	0.99	1.02 per gal.

Turpentine Stationary.—The market is quiet and unchanged. The market in the South is stationary, due, it is said, to the light export trade from Jacksonville. The demand is expected to improve as the season advances, and, as this will cause a depletion of stocks, higher prices for turpentine may be expected. Stocks of turpentine are light locally and business is quiet.

The following prices are being quoted for turpentine in Toronto:—1-barrel lots 87c, 2 to 4-barrel lots 86c, and 5-gallon lots 95c per Imperial gallon.

White Lead Up Again.—Another advance of 25c in white lead in oil brings the price up to $11.45 in ton lots. Although prices have reached an unusually high level, there is nothing to indicate that they will stop going up, as the pig lead market is strong, and promises to

Have you asked us how

the big Consumer Campaign back of the

Canada Paint

trade-mark is going to directly benefit you? Ask us to-day if you hope to be "among those present" when the division of paint profits, for the season, is made.

Our far-reaching consumer selling plan will practically drive sales over your counter if you are a Canada Paint agent; if you are not, it will drive them over your competitor's counter.

It's to your own best interest to sell the C. P. "full line"—for your customers will be more than half sold when they get to your store.

If you are interested, ask us to give you the complete selling story.

Canada Paint Company, Limited

572 William St., MONTREAL

To-day is "The Day" to "Get Out and Get Under" the Profits

If he cannot supply you, we will do so quickly.

MEAKINS & SONS, Limited

HAMILTON, ONTARIO

Warehouses : Winnipeg, London, Toronto, Montreal.

Like the onward march of the glacier, the force of example is irresistible, but infinitely slow. Advertising, however, is like the snowstorm that covers the country in a single night—but don't forget that if you want to keep the country covered you have got to keep the snow falling or the heat of competition will melt it.

The Stableman Knows

That a broom or brush that holds its bristles saves him both time and money. But even more important is the fact that the bristles grip the dirt and fetch it all out. That is why

"KEYSTONE" HORSE and STABLE BRUSHES

are so popular. The Keystone line includes about everything that is needed in the way of horse brushes—every one is about the best that can be made.

Get prices and information about the "Nugget" Broom, Keystone brand Brooms and Brushes.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

ADVERTISING.

Advertising in a trade paper is simply stating openly who you are and what your business is. It is pointing out to the readers that you have something of service for them, a commodity of usefulness to profit both you and them. The only men who do not advertise are those who have nothing to offer. They are dead, even if they do not know it.

"AYLMER" Force Pumps

They are certain to sell easily because it has several advantages over the ordinary style.

Has longer stroke, more power, and works easier.

While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.

It will be to your interest to write for full particulars now.

P&L Magazine Advertising Brings the Buyers to this Dealer's Store

As if they literally stepped out of the pages of the magazines right into the store, is the experience of Mr. McMullin, Manager of the Paint Department of Asam Brothers, Philadelphia. Recently he was asked by a special writer of the "Painters' Magazine and Paint and Wall Paper Dealer": "Do you really believe that all the national advertising which has been done by the manufacturers has benefited either jobbers or retailers?" Mr. McMullin replied: "Well, I'll answer that question from my experience in this store. After the Saturday Evening Post or some other large circulating medium has run an advertisement on Pratt & Lambert Vitralite, for example, *we always* notice an increased demand — were we to market a brand of our own and try to market it as a substitute for a nationally advertised product, we would have a hard time."

Make your varnish selling problem easier by handling Pratt & Lambert Varnishes, the most widely advertised line of varnishes, proven by space used and money expended for magazine advertising.

Atlas 10 Cent Fly Swatter

This swatter has an extra long handle — 10 inches. It is very neatly and securely bound with soft green felt — cannot mar the finest furniture. Especially adapted for parlor or drawing room use. We have made it extra strong and flexible — will outlast any now on the market.

Our 5 cent swatter is the best ever sold for a nickel. Also it has a triangular fold, permitting the insertion of your ad. if you desire.

Now is the time to place stock orders. We'll gladly quote prices and terms.

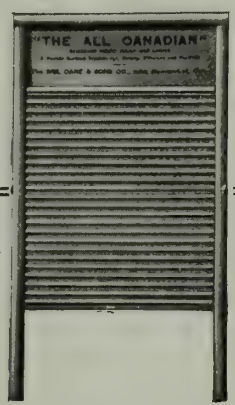
Atlas Mfg. Co.
New Haven, Conn.

Want Ads.

There is someone who is looking for just such a proposition as you have to offer. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

TRY IT OUT.

A want ad. in this paper will bring replies from all parts of Canada.



COSTS LESS

than aluminum and zinc wash boards, is just as good and is more serviceable.

The All-Canadian All-Wooden Wash Boards

are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped washboard sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.

The finest grained hardwood is used for rubbing surface.

Retails at 20c and leaves a BETTER profit.

Standard zinc, glass and enamel wash boards always on hand for prompt delivery, until notice to the contrary.

PEERLESS ORNAMENTAL FENCING
It's Made of Heavy Open Hearth Steel Wire
with all the impurities burned out and all strength and toughness left in. Heavily galvanized. Every intersection is locked together with a Peerless clamp. Top and bottom wires of Peerless Poultry Fencing are extra heavy—extra strong. Consequently fewer posts are required. **Peerless** fencing can't sag—can't rust—can't get out of shape—can't help giving absolute satisfaction.
You can sell our fence with a clear conscience and make money, too.
Send for our dealer's proposition. It's attractive. It will interest you. It's well worth a stamp. Send today.

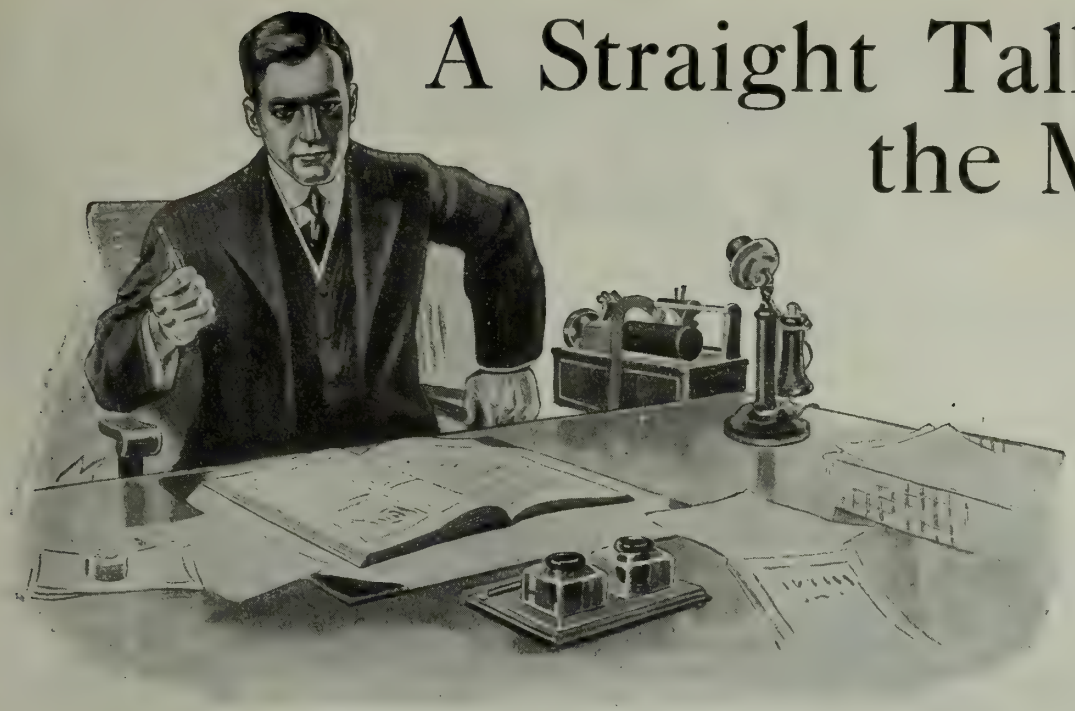
FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

A Straight Talk From the Manager



Look Into This Motor Accessory Question Now!

For a long time you have realized that "hardware" and "auto accessories" are synonymous terms, and you have been promising yourself that you would "go into" auto accessories soon.

The time has now come for you to take action. Even those motorists who put up their cars for the Winter will soon be bringing them out and buying a new list of accessories to bring their beloved possessions up to the minute.

There is much for you to learn before you can conduct an auto accessory department in such a way as to secure the maximum results.

Right now, before you have a chance to think of anything else, turn to the tinted pages in the front of this issue and study the advertisements of auto accessories and sporting goods. Then write the firms whose advertisements interest you, and ask them to tell you how you can make money in selling their specialties.

Where is your pen and letter pad?

J. G. L.

The Ross Sporting Rifle is the Choice of Big Game Hunters

Every day we receive letters praising the accuracy and low trajectory of our .280 High Velocity Rifle and the tremendous shocking and destructive power of the Ross .280 Copper Tube expanding bullet (Patented). Sportsmen are learning that this is the best equipment to take when after big game and that it greatly increases the chances of success.

The Ross .303 Sporting Models also give excellent results. Accuracy, reliability and power, combined with low price, have earned them many friends.

There is an ever-growing demand for Ross .22 Cadet Rifles which are extensively used for musketry training purposes. Their accuracy, the low price of the ammunition and the fact that they are the official arm for Canadian Cadet Corps, combine to steadily enlarge their field.

PUBLICATION OFFICE: TORONTO, CANADA

MADE IN
PREMIER
CANADA

The Only Galvanized Sheets Made in Canada—and The Best Made Anywhere.

We quote below from a letter recently sent by a prominent (but unwise) Canadian Jobber to a retail dealer:—

> "On account of our own stock of Sheets being exhausted, and the Mills sold up in full to July next, we cannot quote you for Spring delivery."

A most humiliating confession that the Jobber hadn't bought "PREMIER" Made-in-Canada SHEETS.

You may need few sheets now, but how about APRIL, MAY, JUNE and the BUSY SEASON?

If your Jobber is a "Dead One," write us—we have a list of live ones.

Don't lose the good trade, the profits and the prestige, but buy "PREMIER" now.

Big Ben
Baby Ben

The Business Getters

BIG BEN and Baby Ben have so much confidence in their ability to make good for you that they go right into the homes of your customers and solicit business.

While other clocks are lying 'round the shelves or under the counter waiting for *you* to sell them, Big Ben and Baby Ben are out plugging for your business and creating a demand for themselves. They do this through the advertising pages of magazines with national circulation.

It took more than mere nerve to step into the advertising limelight and talk to the public about these clocks—it took absolute belief in the clocks themselves and their ability to satisfy the trade, for every advertisement that appears is a personal endorsement by the Western Clock Co. of the quality of the goods and a guarantee of their excellence.

Advertising *might* sell a poor clock for a year or so—till the public got onto it—but to *keep on* advertising for five years, increasing the sales each year, 90% of them repeat orders, takes a first quality clock to back up the advertising.

Big Ben also contributes to your window and counter displays. He brings neat, interesting show cards and handsome, colored posters to liven up the windows and store and incidentally sell more clocks. He's working on some new stuff that you'll like.

This is to be Big Ben's biggest year. We are having difficulty supplying them fast enough. Right now we are five weeks behind on deliveries, so anticipate your needs.

Western Clock Co.

La Salle, Ill., U. S. A. Makers of *Westclox*

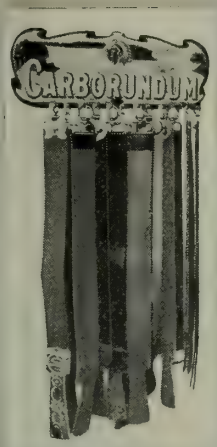
Are You Using This Carborundum Sales Help?



WHY not let this Carborundum Razor Strop Display Hanger become your salesman? Hang it in your display window and watch your razor strop sales increase. The hanger is beautifully lithographed in eight colors and has twelve hooks from which to display razor strops. This display rack is furnished free to any dealer with the purchase of any assortment of twelve strops.

In taking your inventory, be sure that you have a good supply of Carborundum razor strops. Made from soft, velvety horsehide. The finest Carborundum powder is rolled into the corrugated side, thus giving both a sharpening and finishing strop.

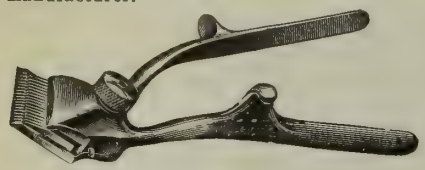
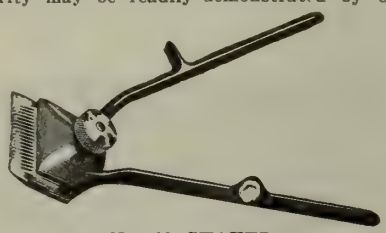
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.



No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.

10,000 Hardware Men Sell These Files—Do You?

If not, then it will be to your advantage to do so. No other files give such satisfaction to users and no other files yield so fair a percentage of profit to dealers as these files:

KEARNEY & FOOT GREAT WESTERN
AMERICAN ARCADE GLOBE
(Made in Canada)

Then, too, our national advertising campaign, educating factory superintendents, workmen and large employers of labor to throw away files when they reach their "inefficient point," has greatly increased the demand for our files. Dealers carrying these lines are doing a bigger business than ever before as a result of this advertising.

If you stock and push these lines you will sell two files in future for every one you sell now.

HERCULES

SHELF LOCK

STRATFORD LADDERS

Are a Trade-Satisfying Line

The **HERCULES** is made right in every particular. The wide top, sides, steps, and all stock entering into it is carefully selected from the finest material. **It is the most perfect ladder made.**

All iron and steel parts are finished in aluminum, which, with the clear bright woods, makes this pattern one of the most attractive and most easy sellers on the market. The combination of strength, safety, durability and attractiveness is unexcelled.

The **"SHELF LOCK"** is the lowest price step ladder we make. Galvanized steel ears fasten the legs and risers to the top.

The Lock that holds the ladder from opening and closing when in use is made by using strips of steel to form a hinge with the arms that support the shelf. Write for catalog.

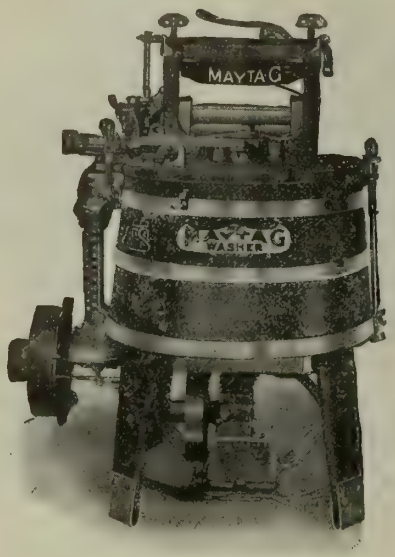
The Maytag Multi-Motor Washer

Announcement Extraordinary!



What the Maytag Multi-Motor Washer Will Do.

It operates the washer and wringer. It will operate the sewing machine, churn, cream separator, food chopper—or any group of small machines—that do not require more than ½ H.P.

Now Ready! Something entirely new! Looks good—"makes good"—sells on sight! Every woman wants one! No competition! Only Multi-Motor Washer on the market!

In short, Mr. Dealer, what has hitherto been considered impossible in washing machine manufacture has been achieved in the Maytag Multi-Motor Washer.

The secret is in the light, powerful, compact little motor that is mounted right on the washer—burns gasoline, kerosene, gas or alcohol. Guaranteed for THREE YEARS.

The Maytag Multi-Motor Washer is breaking all sales records for us, so it MUST be selling fast for our dealers.

The price fits the moderate purse, but puts a generous profit in your pocket. GET SOME OF THIS GOOD BUSINESS. Be the FIRST one to supply the demand in your town.

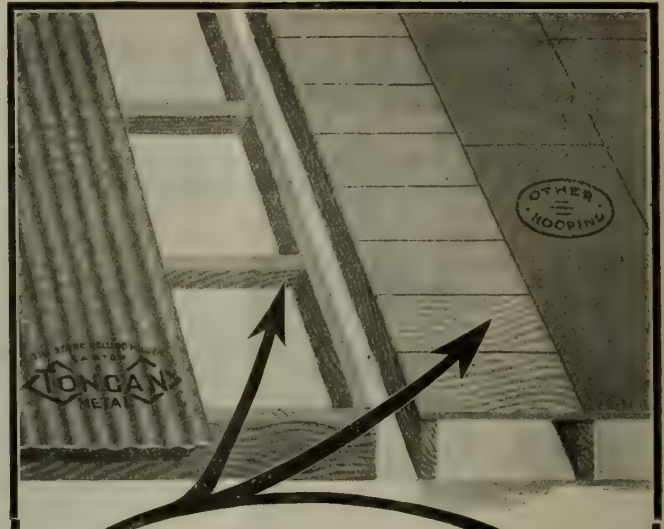
Now, listen! Some live, progressive dealer in your territory is going to make **BIG MONEY** handling the Maytag Multi-Motor Washer—and it might as well be **YOU.**

You positively **CAN** sell this washer and, if you don't, your competitor will—and pocket the profits. Remember, the proof of progressiveness is showing new things **FIRST.** This Washer is the same as our regular Power Washer we have sold for years, except that it has attached under the tub a ½ horse-power, 2-cycle air-cooled engine.

The Merchants Hardware Specialties, Ltd., at Calgary, sole agents for Alberta. If in business in Alberta, write them.

THE MAYTAG CO., LTD.

WINNIPEG, MAN.



Note the difference

Here is a saving in material and labor cost which is usually overlooked

Note that Corrugated Toncan Metal Roofing can be fastened directly to the rafters or purlins (wood or iron), while for most other roofings tight board sheathing must be laid over the rafters first; then the Roofing is applied to the sheathing.

This means a great saving to your customers in lumber, cost of superstructure and labor cost.

Besides

TONCAN METAL

ROOFING, SIDING AND ACCESSORIES

Resist Rust and Corrosion

Years of service have proved Toncan Metal's ability to withstand the most severe corrosive influences better than any other sheet metal made from iron ore.

And Toncan Metal's fire-proof, lightning-proof and weatherproof properties, together with its very moderate cost, means true economy to the user.

Can you see how you can gain friends and increased business by recommending Toncan Metal to your trade?

The Children of Purity

Rust-Resistance, Welding Quality, Enameling Property and Electrical Conductivity are the children of PURITY and SCIENTIFIC CARE in iron manufacture.

Chapter II

WELDING QUALITY

The greatest difficulty in the way of securing perfect welds in iron or steel is **unevenness in the material.** If some portions are harder or softer than the rest, of finer or coarser grain or have a different proportion of carbon, manganese or other impurities, the degree of softening of the two surfaces to be joined will not be the same at all points, and the result will be an imperfect and unreliable union.

Because of its great Purity, the comparative absence of slag inclusions, and the intelligent care devoted to all stages of its manufacture, Armco (American Ingot) Iron is almost perfectly *even* in its composition and structure. Its working and welding qualities are radically different from those of steel, and it has some peculiarities which must be taken into consideration; but, these once understood, the metal becomes a prime favorite with workmen; welding operations by any of the processes in use are easily and rapidly performed and with uniform success.

The Davis-Bournonville Co. of Chicago, specialists in welding apparatus, write us of Armco Iron—"We can state that it welds very much more easily and very much more smoothly than any other with which we have come in contact."

The American Rolling Mill Co.

AMERICAN ARMCO INGOT IRON

The trade mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

Licensed Manufacturers under Patents granted to The International Metal Products Company.

Make Your Local Advertising Pull More Business

Hundreds of Canadian hardwaremen are making their local advertising, their circulars and booklets pull more business for them, by using small electros to brighten up the reading matter.

We can supply you, just the same as we have these other hardwaremen, with these electros, at the small cost of 15c each. Every cut is mounted on wood ready for use when it leaves our office.

A few of the many electros we have in our assortment are shown on this page and if you wish sheets showing our complete list, drop us a card and sheets will be sent at once.

DO YOU KNOW WHAT

SIMMS
SET IN RUBBER
SIMMS

STAMPED ON A BRUSH MEANS?

Are they just words of an indefinite meaning, or do they tell you that the invention of the "Set in Rubber" process was the greatest single event in the history of brushmaking?

That it gives to the public a brush that can be used in anything in which a brush should be used without in any way affecting the composition that holds the bristles in the ferrule?

That turpentine, grease, crude oil, linseed oil, paraffine, alcohol, amyl acetate, tar, carbon tetrachloride, hot water, kalsomine, paint removers, or anything else in which a brush is ever used, has no more effect on the setting than a dewdrop on a prairie fire?

THAT SIMMS ARE THE ONLY SET IN RUBBER BRUSHES

MADE IN CANADA?

That the methods used in the making of these brushes are the development of over thirty years of careful study and experiment in the setting of brushes in rubber?

That the machinery used represents the investment of many thousands of dollars?

That they are made in a modern reinforced concrete building, the finest building in the world, exclusively used in the making of brushes?

That the makers are specially trained in the art of making real brushes?

That the bristles in them are far superior to the "Just as Good" kind?

That they are absolutely guaranteed by a firm of international reputation, to hold the bristles in the ferrule for ever?

These and many others are the things that Simms' "Set in Rubber" brushes represent. Keep them in your mind when buying brushes; it's money in your pocket.

Vol. 30 TORONTO, FEBRUARY 19, 1916 No. 8

New Tariff Affects Fuel and Road Oil

One-half Cent Per Gallon Will Not Materially Affect Price of Oils in General—Means Actual Increase of One-quarter Cent Per Gallon—Lubricating and Illuminating Oils Not Affected—Tax on Profits

THE new tariff on oils which went into effect on Wednesday of this week will affect but two classes of oils, namely, crude oil for fuel purposes and a low grade oil used for the sprinkling of roads. All oils such as machine oil, sperm oil, seal oil, coal oil, cylinder oil, benzine and gasoline will not be affected.

The measure as introduced by the Minister of Finance, Sir Thomas White, provides that a duty of one-half a cent per gallon shall be imposed on petroleum oils of a specific gravity of .8235 or heavier at 60 degrees temperature. Crude petroleum imported to be refined, together with illuminating and lubricating oils are not included.

Some misunderstanding has been occasioned through the announcement by a number of papers that the new tariff will affect illuminating and lubricating oils. This is not the case. Authorities when interviewed by Hardware and Metal were emphatic in their assertions that only crude petroleum will be affected, judging from the information which they have obtained. The hardware trade in general will be interested to know that they need not expect an advance in the price of oils as a result of the new tariff.

One-Quarter Cent Increase

The Minister of Finance estimates the revenue from the tariff on this class of oil will net the Government in the neighborhood of $500,000 during the ensuing year. An estimate of the amount of crude petroleum likely to be imported into Canada during the year 1916 by reliable authorities ranges from 70,000,000 to 100,000,000 gallons. A duty of half a cent per gallon will make the revenue from $350,000 to $500,000.

This will, however, not all be a clear gain to the revenue of the Dominion. There has been in vogue a war tax of seven and one-half per cent ad valorem on the crude oils imported into this country. In practice this worked out at the rate of about a quarter cent per gallon. The new tariff does away with this ad valorem tax and substitutes a straight tax of a half cent per gallon. There will, therefore, be an increase of approximately one-quarter of a cent per gallon on the crude oils.

Consumption of Fuel Oil

There has been a great increase in the amount of this class of oil used during the past year in the production of munitions of war. Factories recently put in operation in Canada for this class of work invariably use the crude petroleum as a fuel. A much hotter and quicker fire results from its use. There is also a considerable quantity used in other industrial plants throughout Ontario and other parts of the Dominion. On the Pacific coast many of the steamship lines have their boats equipped with the oil-burning apparatus and large quantities are consumed in this manner.

As to whether the new tariff will affect the users to any considerable extent, oil refiners are of the opinion that the burden will be borne without complaint. Refiners and importers expect their profits will be reduced by about half the amount which will be raised by the Government through this new tariff, while the consumers of this class of oil will have to pay the balance of the tax. The new tax is not of sufficient moment to cause any marked advance in the price of this class of oil.

Victoria Museum, Ottawa, where budget speech was delivered. Parliament has been sitting in this building since the House of Commons was destroyed by fire.

Expect Increase in Price of Oils

But the question of supply and demand

ment of the price of all oils because of a diminishing supply and an increased demand will undoubtedly operate to cause a still greater rise in the price of almost every class of oil. So far as the new tariff goes the price of oil will not be materially affected. Those who will bear the brunt of the tax will be industrial plants, including many of those engaged in the manufacture of munitions. But even with them the tax will not be of such proportions as to make them lie awake 'o nights.

Deference to Coal Companies

The tax on fuel oil and the tax on apples are the only increases in the tariff, according to the new measure of the Minister of Finance. The tax of 90 cents a barrel on apples was put on out of deference, it has been stated by the Minister of Finance, to the fruit-growers of British Columbia. The fruit-growing industry in that province, it was pointed out, needed a measure of protection against the fruit from the States of Washington and Oregon.

As to what interests are involved in the tariff on fuel oil other than as a means for revenue, oil men do not hesitate to say that deference has been paid to the wishes of the coal companies of British Columbia.

Coal companies of the far western province have for some time viewed with alarm the increased use of fuel oil for manufacturing purposes and on steamship lines. Many of the ships of the Canadian Pacific Railway and Grand Trunk Railway have been equipped with oil-burning apparatus and have discarded the coal system. An active agitation has been carried on on behalf of the coal interests for a tariff to protect the coal companies of Vancouver Island and the Crow's Nest district. Since the new tariff applies only to fuel oil, no other classes of oil being affected, it would seem to indicate that the contentions of the oil men are well founded.

Reduction of Tariff on Certain Classes

In certain classes of oil such as the low distillates used for certain types of engine, notably the Diesel, the new tariff will actually effect a saving to the consumer. Under the former tariff the tax on this class of oil was two and a half cents per gallon. Under the new tariff this will be reduced to half a cent per gallon, a clear saving of two cents a gallon.

On the whole the new tariff on oils is such as to be small cause for alarm to the trade in general. Very little if any increase in the price of oils will result through the tariff. As to the increase in the price of oils through other causes, that is another question. Oil men do not hesitate to say they expect the prices of all oils to climb still higher.

Hardware Men Affected

Even though hardwaremen will not be effected to any great extent by the tax on oil they will in some cases be called upon to bear their share of war taxes through the collection by the government of a portion of the profits on their business. There are many wholesale and retail hardware firms with a company capitalization of $50,000 and over. The Minister of Finance proposes to tax all incorporated companies of a capitalization of $50,000 and over to the extent of twenty-five per cent. of their profits over and above seven per cent. For incorporated concerns he proposes to levy a tax of twenty-five per cent. on all profits over ten per cent.

All trades and businesses are to be affected with the exception of life insurance companies, the business of farming and stock-raising and companies and concerns with a capitalization under $50,000. But manufacturers of munitions with a capitalization less than $50,000 will also be called upon to pay.

Criticism of New Taxes

There has been considerable criticism of the new taxes on the ground that there seems to be an inequality of burden arising through the distinction between incorporated and unincorporated concerns. It is pointed out that there is a possibility that large concerns with an enormous capitalization might even escape the tax altogether, provided there is no means of finding the actual amount of capital invested in the company. Details as to how the Finance Minister expects to overcome these seeming inequalities will be awaited with interest. Some of the important features of the new tax levy are as follows:

Provisions of New Measure

That there shall be charged, levied, and paid to his Majesty a tax of twenty-five percentum of the amount by which the profits arising from any trade or business subject to the tax in every accounting period ending after the fourth day of August, one thousand nine hundred and fourteen, exceeded, in the case of incorporated companies seven percentum, and in the case of all other persons ten percentum, upon the capital employed in such trade or business.

Applications of the Tax

That the trades and businesses to which the tax shall apply are all trades and businesses, including the business of transportation (whether continuously carried on or not) of any description, carried on or partly carried on in Canada, except

(a) Any trade or business other than a trade or business which, or any portion of which, is the manufacturing or dealing in munitions of war or in materials or supplies of any kind for war purposes, the capital employed in which is less than fifty thousand dollars.

(b) The business of life insurance.

(c) The business of farming and stock raising.

Incorporated Company's Capital

That the capital employed in the trade or business of any corporated company having its head office or other principal place of business in Canada shall be the amount paid upon its capital stock.

That the capital employed in the trade or business of a non-Canadian company shall be such portion of the amount paid upon its capital stock as shall bear the same proportion to the amount paid upon its entire capital stock as the value of its assets in Canada bears to the value of its assets outside of Canada.

Capital of Other Than Companies

(1) That the capital employed in the trade or business of any person other than an incorporated company shall be taken to be the value of all assets, real and personal, movable and immovable, issued in connection with such trade or business:

Computation of Profits

(1) That the profits shall be taken to be the net profits arising in the accounting period.

(2) The profits of a non-Canadian company shall be such proportion of the net profits as shall bear the same proportion to the total amount of its net profits as the capital of the company as defined herein bears to the total amount paid up upon its capital stock.

(3) No deductions from gross profits for depreciation or for any expenditure of a capital nature for renewals, or for the development of a trade or business, or otherwise in respect of the trade or business, shall be allowed except such amount as appears to the Minister to be reasonable and to be properly attributable to the accounting period.

(4) Any deduction made from the gross profits for the remuneration of directors, managers and persons concerned in the management of the trade or business shall not, unless the Minister, owing to any special circumstances, otherwise directs, exceed the sums deducted for those purposes in the last accounting period ending before the fourth day of August, 1914, and no deductions shall be allowed in respect of any transaction or operation.

Requirement of Returns

That provision be made requiring persons liable or believed to be liable to make such returns as may be necessary to assess the tax; and that provision also be made for the assessment of the several persons liable to taxation.

Special Rates for Convention Visitors

All Arrangements Completed for Eleventh Annual Convention of Ontario Retail Hardware and Stove Dealers' Association to be Held at Toronto, Tues., Wed., Thurs., Feb. 22, 23, 24.

ARRANGEMENTS have been completed with the railway companies for reduced railway rates for those attending the convention of the Ontario Retail Hardware & Stove Dealers' Association, at Toronto, on Tuesday, Wednesday and Thursday, Feb. 22, 23, and 24. The cost of transportation will be based on the attendance of members at the convention. Complete details regarding railway rates, and how to obtain reduced rates, are given in the accompanying panel.

Going tickets may be purchased Feb. 18 to 24. Return tickets may be purchased up to Feb. 28 inclusive. This arrangement will allow four days before the opening of the convention, and four days after the convention closes for hardwaremen who wish to visit Toronto.

Tuesday Opening Day

The first meeting of the convention will be a meeting of the Advisory Committee at 1 p.m. Tuesday. At 7 p.m. there will be a meeting of the Executive Committee and appointment of convention committees.

A large number of association members will probably arrive on Tuesday evening. Provision has been made for the reception and registration of members who arrive at this time.

Wednesday Sessions

The early trains on Wednesday should bring a large crowd of hardwaremen to Toronto. At ten o'clock the opening session will be held in the banquet hall at the King Edward Hotel. This meeting will be open to members and associate members.

This meeting will be devoted to the reception of visitors to convention, including honorary members and trade representatives. President Conn's address will also be delivered at this session.

Reports will be received from the Executive and Advisory committees, secretary, treasurer, and auditors.

TO OBTAIN REDUCED RAILWAY RATES

Purchase a one-way ordinary first-class adult ticket (fare not to be less than 50c) to Toronto, and obtain from ticket agent a Standard Convention Certificate (Form 24).

At first meeting you attend hand your certificate to the Secretary of the Association for endorsement, and for validation by the special agent of the railway lines.

After validation, the certificate will be returned to you on payment of fee of 25c, and must be presented to ticket agent to obtain return ticket at least thirty minutes before the departure of train.

After paying 25c validation fee, the return fares will be as follows:

If certified Attendance is 99 or less: Two-thirds one way ordinary 1st-class adult fare.

100 to 299: One-third trip ticket ordinary 1st-class adult fare.

300 or more: Return trip ticket without further charge.

Afternoon Session

By Wednesday afternoon at 2 p.m. all association members should have arrived. At this meeting a report will be received from the secretary on the association's service to members. A discussion will take place as to how the service can be improved and extended.

"Price maintenance and how to avoid cutting of prices below the legitimate profit line," is a subject that will be taken up and discussed at this meeting. Every hardwareman is interested in the subject and there should be a considerable degree of interest taken in the discussion.

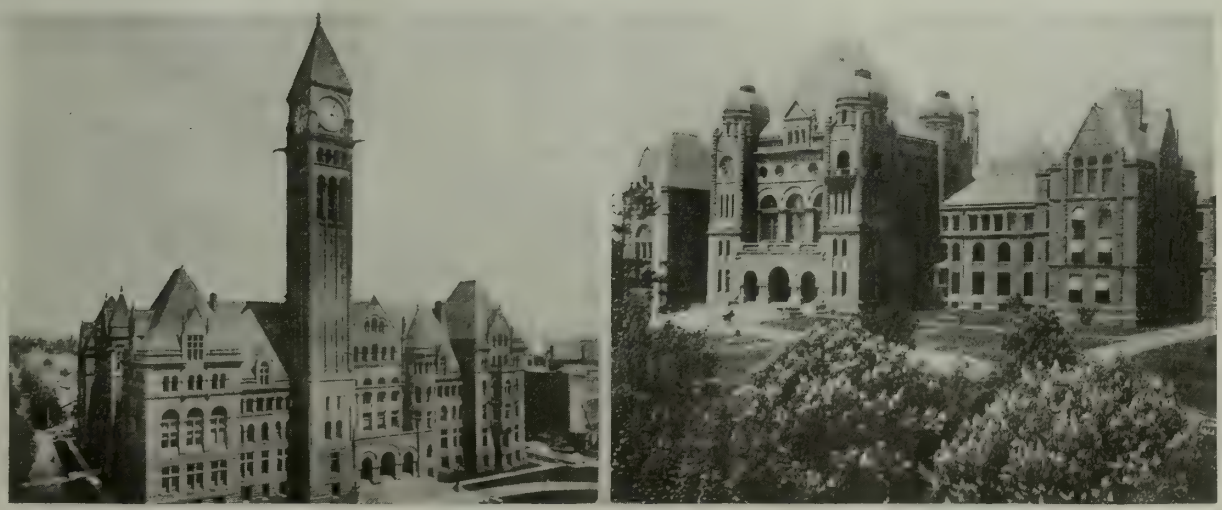
The Law Re Firearms

The law governing the sale of firearms and its effect upon the hardware dealer, will also come in for discussion at this meeting. Some merchants are of the opinion that the Act should be repealed

Hardware and Metal has published complete details regarding the Act, on a number of occasions. For new subscribers or those who are unacquainted with the provisions of the Act, a summary follows:

The Act respecting offensive weapons was proclaimed April 22, 1911. The Act is called, "The Offensive Weapons Act."

"2. Every person who exposes for sale, offers for sale, or sells any bowie-knife, dirk, dagger, stiletto, metal knuckles, skull cracker or slung shot, or



Two places of interest in Toronto, the Convention city. Toronto city hall on left, Ontario Parliament Buildings on right.

who sells a revolver, pistol or air gun to any person other than one holding a certificate issued under section 118 of the Criminal Code, or one, being over 18 years of age, who produces to and leaves with the vendor a permit in writing, signed by the Superintendent of Provincial Police, or a Chief Constable of a city or town, allowing him to purchase a revolver, pistol or air gun, shall be guilty of an offence and liable on summary conviction to a penalty not exceeding $200 or less than $25, or to imprisonment for a term not exceeding six months with or without hard labor or to both, and the bowie-knife, dirk, dagger, stiletto, metal knuckles, skull cracker or slung shot, revolver, pistol or air gun so exposed or offered for sale, or sold by such person, shall be confiscated by the police magistrate or justice and transferred to the superintendent of Provincial Police, or destroyed as such magistrate or justice may see fit.

3—(1) Every person who sells a revolver, pistol or air gun under the provisions of section 1 hereof, without keeping a record of the date of the sale, name of maker, serial number of such revolver, pistol or air gun, and the name, address and occupation of the purchaser, or who sells or exposes or offers for sale any revolver or pistol which does not bear a serial number and the maker's name, shall be guilty of an offence and liable on summary conviction to a penalty not exceeding $200 or less than $25, or to imprisonment for a term not exceeding six months with or without hard labor, or to both, and the revolver, pistol or air gun so exposed or offered for sale, or sold by such person, shall be confiscated by the police magistrate or justice and transferred to the superintendent of provincial police, or destroyed as such magistrate or justice may see fit.

(2) The record referred to in subsection 1 may be inspected at any time by any peace officer and a copy thereof shall be transmitted by the person making the sale to the superintendent of provincial police within seven days after the 31st of March, 30th June, 30th September, and 31st December in each year. A violation of this subsection shall render the offender liable, on summary conviction, to a penalty not exceeding $50.

Workmen's Compensation Act

Another subject which will come up for discussion is the Workmen's Compensation Act, and its relation to association members.

The Workmen's Compensation Act went into effect about a year ago. The officials of the Workmen's Compensation Commission at that time announced that after the first year of operation there would be a reduction in rates if warranted.

HARDWARE CONVENTION PROGRAM

The eleventh annual convention of the Ontario Retail Hardware and Stove Dealers' Association will be held at the King Edward Hotel, Toronto, on Tuesday, Wednesday and Thursday, Feb. 22, 23, 24. The program follows:

(TUESDAY)

1 *P.M.—Meeting of Advisory Board.*

7 *P.M.—Meeting of Executive Committee and Appointment of Convention Committees.*
Reception and Registration of Members.

(WEDNESDAY)

9 *A.M.—Registration of Members and Distribution of Badges in Convention Offices—Second Floor King Edward Hotel.*

10 *A.M.—Opening of Convention in Banquet Hall—King Edward Hotel—Open to Members and Associate Members.*
Reception of Visitors to Convention including Honorary Members and Trade Representatives. Short Addresses.
President's Address.
Report of Executive and Advisory Committees.
Secretary's Report.
Treasurer's and Auditors' Reports.

2 *P.M.—Members' Meeting. Report of Secretary on "Service to Members"—Discussion as to Extension and Improvements in Service. Discussion on Price Maintenance and how to avoid cutting of prices below legitimate profit line.*
Consideration of present law regarding sale of firearms and ammunition, and its effect on the hardware dealer.
Consideration of working of Workmen's Compensation Act in relation to our members.
Receiving Reports of Committees.

8 *P.M.—To be devoted to Question Box, and consideration of Trade Problems—Open to Travellers and Associate Members. (Free and easy.)*

(THURSDAY)

9 *A.M.—Receiving Reports of Committees—Consideration of Tenders on Hardware, Tinsmithing and Heating as per sample specifications furnished and discussion on same.*
Discussion on Proper System of Installation of Hot Air Heating Systems—and how to prepare estimates for same.
Consideration of Methods to Increase Trade Through Use of Parcel Post.
Question Box Session.

(THURSDAY)

2 *P.M.—Election of Officers. New Business. Question Box.*

Hardware and metal in the Jan. 22 issue announced that a reduction had been decided upon. Although the amount of the reduction has not yet been announced, there are good reasons to believe that a reduction in rates will be forthcoming in the near future.

Question Box Session

The Question Box session at 8 o'clock on Tuesday evening, will be devoted to a consideration of trade problems. This meeting will be open to travelers and associate members.

Thursday Sessions

The first meeting on Thursday will be held at 9 a.m., and promises to be one of the best meetings of the convention.

At the meeting tenders will be considered on hardware, tinsmithing, and heating as per sample specifications furnished. Plans and specifications were mailed to all members early this week. Every member is asked to tender on one or all groups of hardware, etc., shown in specifications. Tenders should be delivered to Secretary Macpherson at the King Edward Hotel, Toronto, before the opening session of Thursday.

Another interesting discussion on the program for Thursday morning is a discussion on the proper system of installation of hot air heating systems, and how to prepare estimates for same.

Parcel Post

Every hardwareman is interested in increasing his business, and should be interested in the discussion of methods to increase trade through use of the parcel post.

A question box session will also be held on Thursday morning. A properly conducted question box session is one of the most interesting features of a hardware convention, and judging by the questions already submitted for the

Thursday morning session, it should be a real live one.

The election of officers, new business, and a question box session will be held on Thursday afternoon.

Officers of Association

The officers of the Ontario Retail Hardware and Stove Dealers' Association are as follows:—President, C. W. Conn, Tillsonburg, Ont; 1st vice president, W. J. Carter, Picton, Ont.; 2nd vice president, J. N. McGregor, Oakville, Ont.; treasurer, John Caslor, 628 Queen street, W., Toronto; secretary, W. F. Macpherson, Prescott, Ont.; executive committee, W. W. Bennett, Gananoque; A. Wideman, Markham; E. J. Creeper, Owen Sound; A. J. Wright, Hamilton; D. A. MacNab, Orillia; E. A. Whitten, Bracebridge. Auditors, G. Mathewson, Toronto; J. W. Peacock, Toronto.

Advisory Committee, C. W. Conn, Tillsonburg; H. Occomore, Guelph; W. F. Macpherson, secretary, Prescott.

ST. JOHN DEALERS ADVANCE PRICES

A general advance in the retail price of supplies was decided upon at a meeting of the Stove Dealers and Sheet Metal Association of St. John, N.B., at a meeting held last week. This step was forced upon them, the dealers explain, by notices of advances received from manufacturers of an increase in prices, due again to the higher cost of materials. After a general discussion it was decided to effect an advance of from five to ten per cent on the selling prices of stoves, sheet iron, galvanized iron and tin ware. Stove pipe lengths which have sold at twenty cents for more than half a century have been advanced to twenty-five cents and elbows have been jumped to thirty cents.

St. John R. M. A. Elects Officers

At the annual meeting of the Retail Merchants' Association of St. John, N.B., held recently, officers for the coming year were elected as follows: president, A. O. Skinner, (re-elected); first vice- president, F. W. Daniel; second vice-president, John H. Vaughan; secretary, N. C. Cameron; treasurer, William Hawker; executive committee, T. J. McPherson, I. Chester Brown, E. W. Rowley, S. C. Webb and D. J. Barrett. It was announced that eighty new members have joined since the first of the year. The Exhibition Association had asked the merchants association to advise them regarding the prospects for an Exhibition this fall but, as they believed that the buildings would be in use for military purposes, the association could make no recommendation. The association decided to hold another "Dollar Day", the experiment having proved highly successful last year, and a committee was appointed to arrange details.

MANITOBA SPORTSMEN UNITE

Influential Organization in Western Province Planned for Preservation of Wild Life

Manitoba is to have one of the most influential and modern sporting associations in the Dominion of Canada if plans now being prepared for the formation of such a body are brought to a successful issue.

The new association, which will be known as the Sportsmen's Association of Manitoba, will include in its membership men in all walks of life who are interested in outdoor recreation; hunting, fishing, yachting, canoeing and trapping will be represented on the executive board. Provision is to be made for the promotion of branch associations throughout the province, and before organization is completed every sportsman in the province will be given an opportunity to become a member.

SPECIAL NOTICE

DON'T FAIL to ask for Standard Convention Certificate when buying your ticket.

DON'T FAIL to deposit same with Secretary of Association at first opportunity.

DON'T FAIL to exchange certificate for a return ticket when you are leaving Toronto, and at least 30 minutes before train departs.

Going tickets may be purchased Feb. 18 to 24.

Returning tickets may be purchased up to Feb. 28 inclusive.

To Preserve Game

The association will have for its aims and objects the preservation of the wild life of Manitoba; the preservation of fisheries, the protection of migratory birds, which will be accomplished by co-operation with the authorities of the United States.

This phase of the movement is meeting with the approval of the provincial government, and Hon. Valentine Winkler, minister of agriculture, will render what assistance lies in his power to aid in the furtherance of the movement.

It is hoped that the association will be able to issue an annual bulletin dealing with matters of interest to all lovers of outdoor life and recreation. F. G. Simpson, of Winnipeg, has been appointed organizing secretary.

CLEAN-UP CAMPAIGN IN MAY

Montreal, Que.—It was definitely decided at a meeting of the City Improvement Campaign Committee held last week that Montreal will have its third Clean-up Campaign this year, about the third week of May. While the general principle of the campaign was adopted, details were left for the work of sub-committees and future meetings. The work will include three special features—a general educational campaign as to the advantages of cleaning up the city, a campaign amongst the children to educate them as to the advantages of civic as well as personal cleanliness, and prizes to children for work in cleaning up.

This will follow the general outlines of the previous campaigns, which included the educational work, and fixed special days for different lines of work to make the city both clean and beautiful. No financial plans have as yet been made, but it was considered by the general committee that once they had prepared the general plan of campaign, with the reports showing the results of the previous two efforts, the funds, both civic and from individual donations, would easily be available.

INDUSTRIAL

The Steel Company of Canada, at Gananoque, are installing additional equipment for the manufacture of bow sockets and drop forgings, which will enable them to double their output in these lines.

Flour mills at Calgary are working night and day on war orders for flour. The Calgary mills are now completing orders for 20,000 barrels of flour for France, and there are still large British orders to fill. The mills have orders which will keep them working on war contracts for months to come.

FIRST HAND INFORMATION

An article entitled, "Straight Facts on Auto Accessories in the Hardware Store" by Roy F. Soule, appeared in the December 18 issue of Hardware and Metal. The article originally appeared in advertising and selling, for which paper it was prepared and to which credit was given. It might be added that the facts were all gathered by Mr. Soule, Editor of Hardware Age during personal calls made on American hardware retailers. The facts as set forth in the article demonstrate beyond a doubt that auto accessories are meeting with a rapid sale through American hardware stores. A great many Canadian retail hardware firms are also making a success of selling auto accessories.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, FEBRUARY 19, 1916 No. 8

EDITORIAL BRIEFS

REMEMBER the Convention dates, Feb. 22-23-24.

* * *

GIVING a stranger credit before finding out his ability to pay is surely putting the cart before the horse.

* * *

WHEN you stop fighting your neighbor and combine your energies to defeat the common enemy you will make progress toward better trade conditions.

* * *

RETAILERS should watch the markets closely. Many price changes are taking place and the shrewd buyer is the one who is going to get the best price.

* * *

IF YOU cannot go to the Convention yourself, be sure and send one of the clerks. He will appreciate the trip and will gain pointers at the Convention that will make him a more valuable employee.

* * *

BUSINESS success depends upon many conditions, any one of which may be said to be vital. But of them all, none is more essential to success than the initial proceeding, the art of successful buying.

* * *

SOMEONE once said that competition was the life of trade. He should have said that a common-sense, co-operative competition is the life of trade, or a mighty good stimulant, but that a riotous and haphazard competition is the death of business.

* * *

IT IS JUST as important that there should be a quick turnover in the paint department as in any other department of the store. In every line of business the profits depend to a very great extent upon turnovers. Many lines of paint can be sold in profit-paying quantities during the winter months.

* * *

ONE of the greatest troubles of the retail trade has been a misunderstanding of the word "competition." It has occurred to a few that the word could mean something else besides "price"—that there could be such a thing as competition in service, in quality, in suggestion, in originality; but to the great body of merchants, both large and small, it has meant only "price."

* * *

CANADA'S second war Budget has precipitated the local business world into a haze of probabilities. Everybody is trying to ascertain what the new taxes will mean to his particular industry or commercial activity. Very few have so far found fault with the Finance Minister's proposals. Sir Thomas has to make the best of a troublesome situation and it will be much easier to find fault with his proposals than to suggest better methods.

* * *

CHARACTER and cash are the assets on which a business man secures credit and standing. Under most circumstances it is necessary for a man who aims to enter the business arena to possess both; but it is far better to have character and no cash than to have cash and no character. There is a moral in this for business men. Few realize the true significance of good character in the matter of securing credit or extensions. If it were possible for a retailer to penetrate into the innermost secrets of the mind of the credit man who occasionally sits in judgment upon him, he would probably find that the facts which weighed most heavily were those relating to his (the retailer's) methods of doing business, his reputation for fairness of dealing and the sidelights on his character with the credit man, by ways of his own, had obtained.

ATTEND THE CONVENTION

THE eleventh annual convention of the Ontario Retail Hardware and Stove Dealers' Association will be held at Toronto, on Feb. 22-23-24. A complete program, and details regarding special railway rates, etc., appear elsewhere in this issue.

The convention this year should be one of the best on record. The program is a good one, and a number of very important questions will be brought up for discussion at the meetings. The officers of the association have worked hard during the past year to make the association a real, practical help to its members.

Secretary Macpherson has greatly improved the

service to members. The price book which he prepared and distributed has proven to be of practical value, and almost without exception has met with the approval of association members. Steps will be taken at the coming convention to enlarge the association's services to members.

The convention can be made the most interesting in the history of the association if the members will turn out and attend in large numbers. The meetings, with two exceptions, will be closed meetings to which only the members of the association and the trade press will be admitted.

The question-box discussions should be particularly interesting.

There will be plenty of accommodation for visitors. Toronto is centrally located, with good train connections, and easy to reach in a short time from any part of the province. The railways have arranged for special rates which will be gauged according to the attendance at the convention.

The convention will be largely what the members make it. The officers have done their part. It is now up to the individual members. If each member does his part by attending the convention, it will be a hummer. If the members want the association to grow and prosper and to become a strong influence in the trade, they will have to give it their whole-hearted support.

FINANCIAL STATEMENT NEEDED

DURING the past few weeks stock-taking has been going on in hundreds of hardware stores throughout the Dominion. Every merchant who conducts his business on strict business principles realizes the necessity and importance of having each year a strictly accurate statement of his financial condition. Credit managers are constantly trying to impress upon retailers the importance of stock-taking, and that extreme care should be taken in preparing the annual statement.

Credit is given a merchant because of the confidence reposed in him. Requesting a statement when credit is asked is not a reflection on one's character, honesty, or business ability, but is done to secure information to enable business to be conducted intelligently.

Large assets are not always necessary to the creation of credit; what is most desirable is, that credit be in relative proportion to the actual assets, and in harmony with conditions which create and maintain it. A merchant's capital is the sum of his net available resources, plus his credit. The giver of credit is a contributor of capital, and becomes, in a certain sense, a partner of the debtor, and, as such, has a perfect right to complete information of the debtor's condition at all times.

When a statement is made, it should be absolutely correct. To make it so necessitates the taking of at least an annual inventory and the keeping of an accurate set of books. An annual, therefore, will tend to make a debtor a better buyer, make him more familiar with his stock, more careful in giving credit, more conservative in incurring debt, and will result in a better knowledge of his business generally.

A merchant who desires to serve his own best interests should recognize that his most valuable possession, apart from his actual assets, is a sound, substantial and unquestioned reputation as a credit risk, and that under the prevailing conditions and demands of business, the most effective, and eminently the best way to prove his basis for credit, is to be willing to submit a statement of his financial condition.

MORE LOCAL ORGANIZATIONS

HOW has organization work among the hardwaremen gone forward during the year that has intervened since the last convention of the Ontario Retail Hardware and Stove Dealers' Association? At the last convention the need for co-operation among small groups of competing hardwaremen was pointed out. There are many interests in common among these small groups in a given district upon which they would be wise to get together.

Reports from various parts of the country indicate that a healthy start has been made in this respect within the past year. Dealers have been surprised to find out the numerous ways in which they can be of service to each other. This principle is carried out in many branches of industry and the members would never again go back to the old individualistic way of doing things. For instance, there are the employing printers' associations. Each of the members are in a sense competitors of one another. Yet they find they have a common ground when their interests as a whole are concerned.

Undoubtedly this idea will be taken up and encouraged still further at the forthcoming convention. Good results have already accrued through local organizations. Members of the trade will await with interest reports of the actual good which has been accomplished. From these reports the trade will undoubtedly go forward with a stronger determination to make local bodies, or at least the spirit of co-operation, a vital force for the betterment of conditions among the dealers engaged in the trade.

This is the age of co-operative competition. It would be unwise to go back to the old individualistic order. What is good for businesses and trades on a large scale is good for dealers in a small way. The principle holds good even though the number concerned may vary. It is a get-together-time in which we are living. Hardwaremen would be wise to carry out this idea so far as practicable within the trade.

Pushed Appliances and Sold Them

Montreal Merchant Tells How He Has Developed a Large Sale for Electrical Appliances—The Popular Sellers—Electrical Goods Exhibit Helped Sale of Appliances.

An authorized interview by a Hardware and Metal representative with H. L. Philbin, of M. Philbin Hardware Co., Montreal, Que.

THE list of electrical appliances of real merit that are constanly being added to is forcing the most conservative housewives to a broader conception of the uses to which electricity may be put in the home. The thing that was once a toy is now actually the mainstay of the kitchen maintenance of many homes. Slowly, but surely, the public have been educated by the vast influences of modern civilization to a real knowledge of the utility and cheapness, cleanliness and saving of work embodied in the use of electrical appliances.

Electrical companies, governments, individual firms and dealers, the daily reading of the nation: all have added their quota to the instruction. Possibly the chief instrument of it has been the hand to mouth interchange of experience that constantly goes in connection with any new theory. Whatever the cause the electrical line is yearly assuming greater importance on the hardware man's shelves. During even the dullest period of the war and even more so lately there has been an actual increase of a most astounding nature in our sales of this line of goods.

A list of the articles that would come under this head would include carpet sweepers, vacuum cleaners, air compressor for cleaning, electric washing machine, curling irons, foot warmers, water heaters.

In electric lights, the list includes battery flashes and various electrical heating systems. For the kitchen are the baking and warming ovens, the cereal cooker, coffee pot, chafing dish, egg boiler, electric range, flat, sad and laundry irons, frying kettle, fireless cooker, hot plate and broiler, immersion heater, milk warmer, oyster cooker and stewer, plate warmer, radiant grill, sealing-wax heater, sterilizer, samovar, thermostat, toaster, waffle iron, water boiler and warming pads.

Windows Chief Sales Agent

We depend chiefly upon our windows for advertising purposes, use one window pretty steadily for electrical goods and change it once a week—usually alternating with some other line. The window dresser has carte blanche to do or get anything that will aid him in his work whether it is a book on window dressing or additional goods. Our present window centres about an automobile constructed out of battery boxes and surrounded by an indiscriminate display of all manner of search lights that vary from the cheap vest pocket variety to the more expensive lantern shapes. The boxes were saved from sales until we had enough to build this exhibit. The wheels are made by the use of yellow gauze to represent the spokes, and the boxes are joined together with thin wire to make the wheels.

We always carried this line but we find we have to feature it now to keep abreast of the times. People have discovered the convenience of the cheap electrical devices. How much more simple to insert a heater in a dish of water that sits on the table than to get up and fuss about the stove to boil an egg. A whole breakfast may be cooked at the table without even rising, without any heating, any soiled hands. Or for a dinner what can compare with the stove that enables the housewife to set her clocks and go to church serene and undisturbed by the fear of burning roasts. These make great selling points.

The Best Selling Point

But the best selling point of all in my opinion, is a knowledge of the goods offered, and this applies to all lines. To know the history of a product is to be able to sell it, to be able to answer questions, meet criticisms, advise and suggest. It is the one and only true path to salesmanship. I once took a trip through an enamelware factory and was amazed at my later success in selling these articles, the manufacture of which I had familiarized myself with. To be able to point out to the customer the real, the honest points of superiority in the article offered; to be able to explain to him the intricate detail of manufacture and the meticulous care against flaws is to give him a higher opinion of the article he is critically studying with a view to buying.

When a customer asks "What is this?" it is not sufficient to say "Oh that's a good one." Likely, he will say "I'll call in to-morrow." To-morrow never comes. A knowledge of the history of that article would have made a sale.

With tools and some other articles, the situation is slightly different. A mechanic usually knows exactly what kind of calipers he wants, and why he wants that particular size and make. But a woman buying electric goods or cutlery, enamel, tin or aluminum ware is a different proposition. She needs advice.

Guarantee Helps Sales

The fact that the manufacturers now guarantee their goods has been of great assistance to us in our sales. We are now able to state that the goods are unlikely to require repairs for period of the guarantee and if they do that we will make them good.

The goods are better made than they were even a short time ago. The guarantee used only to extend over a period of a year or two and that lack of faith evinced by the manufacturer was a sale killer of gigantic proportions. The people would not buy as long as we could not stand behind the goods. Now there is never any trouble with burnt out fuses and all the other annoyances the pioneer buyers had.

Irons a Big Seller

We find that we sell more irons than any other electrical article. They come in all weights and sizes, can be carried in a suit case for use for traveling by connecting up with the light in a hotel room. The five-pound weight goes best. The broilers go next best probably and with them or at least next best, the several varieties of toasters. Heaters for the sick are also good.

The Advertised Line Sells

The line that is pushed is the line that goes. The electric show in Montreal last fall did a great deal to educate people to this line. We had had the show for years, but the interest in it had been of a negative character in other years. This time, however, the people flocked to the exhibit and evinced a live interest in things. It developed them. Merely an illustration of my argument that people buy the most of those things they know the most about.

Things have got to the stage now when even the lowest priced wage earner may have the chief of these conveniences in their homes. All new houses are wired now-a-days and all classes buy the necessities at least — such as irons. They all want irons.

(Continued on page 54.)

THE JUNIOR CLERK'S PAGE

A False Alarm

Party Introduces Himself to Sales Manager — Wanted to Sell Goods on Commission, But Talked Too Much

Written for Hardware and Metal by Norman Lewis

I WAS in the commodious office of a man who has the Canadian marketing of a much advertised line of tools. A young man was ushered in, or, rather, ushered himself in. He was an aggressive sort, good point if well handled, for he did not hesitate when he saw that the gentleman was engaged.

Instead, he stepped up sort of semi-briskly, ignored me, who had first right upon the other man's time, and said: "I'm the party who called you up on the 'phone."

Stepped Aside

I stepped aside into the farther corner, with the intention of resuming my conversation when said Party had finished his. Grand name that. Party. Fine introduction. So business-like. Not.

"Umph," the handler of men said, non-committal to the nth degree. "Yep. Sort of thought I'd drop in and see you to-day about it," said the Party.

"Well, it wouldn't be right of me to keep you on the waiting list. We never do anything on a commission basis. We'll sell you the goods for you to take your profit on by reselling. I wouldn't like to have you waiting about on the chance of my deciding differently later. I wouldn't do it."

"Well," said Party, "I've got a great trade lined up all over Ontario and the Eastern Townships. If I do say it there ain't any man up there with more friends in the hardware trade than I have. They'll buy from me when they won't from anybody else."

"Well, how much can you figure on selling?"

"My heavens," I thought, "surely this man is not going to be taken in by this false alarm. Surely he's too shrewd a judge of men for that."

"Oh, I can sell twenty dozen a week, dead easy."

"You can?"

"Yep. I've got 'em all going."

"Well, of course you probably know more about it than I do," said my friend humbly.

LOYALTY

Loyalty is that quality which prompts a person to be true to the thing he undertakes. It means definite direction, fixity of purpose, steadfastness. Loyalty supplies power, poise, purpose, ballast, and works for health and success. Nature helps the loyal man. If you are careless, slipshod, indifferent, Nature assumes that you wish to be a nobody and grants your desire. Success hinges on loyalty. Be true to your art, your business, your employer, your "house." Loyalty is for the one who is loyal. It is a quality woven through the very fabric of one's being, and never a thing apart. Loyalty makes the thing to which you are loyal yours. Disloyalty removes it from you. Whether any one knows of our disloyalty is really of little moment, either one way or the other. The real point is, how does it affect ourselves? Work is for the worker. Love is for the lover. Art is for the artist. The menial is a man who is disloyal to his work. All useful service is raised to the plane of art when love for the task—LOYALTY—is fused with the effort.

Then my heart felt at ease. I knew that he knew quite differently than that. So I sat back to see the Roman holiday.

"You know," the wholesaler continued diffidently, "I've quite a few of the boys on the road, some good ones and none of them touch twenty dozen a week. I'd give a pretty good salary," he added, reflectively, as he twiddled a pencil, "to a man who could sell twenty dozen a week. That'd run into money for me. Of course, as I said before, you probably know more about this than I do, but I think you'd find that when you got out on the road you'd find it harder than you think to do this."

"Oh, not me!" exclaimed Party grandiloquently.

"No?" said the other lifting his eyebrows.

"Say," said Party, suddenly changing his ground, "you sell Robertson up at West End, don't you?"

"Yes."

"Well, take a tip from me, Don't."

"Why?"

"He's no good."

"He's been meeting his bills with me."

"Well, I haven't sold him anything except for cash now for going on four months. Better look out. I'm just telling you for your own good, of course. A friend in need, y'know."

"I suppose you wouldn't consider a salary proposition then."

I became alarmed for his sanity again.

"Oh, I might. What do——"

The wholesaler interrupted him.

"Well, you drop in some other time and we'll talk it over."

Party refused to take the hint. "All right. Say, I was just thinking——"

The other had him by the elbow, steering him toward the door, laughing and talking as though loth to see the fellow go. "Yes, yes. Certainly. All right. Come back when you can, and we'll have another talk."

I made to pick up the thread of our conversation again. I felt rather put out at his having been so completely hoodwinked. I received a shock though.

"What do you know about that for a false alarm. Ye gods! Selling twenty dozen a week. A year, I guess. And coming here, knocking Robertson. He always pays on the dot. Has for years. I didn't lose a nickel last year. I take the precaution of finding out what a man is before I let him have a bill of goods. Why, I wouldn't hire a fellow like that to sell my goods if he was the last man on earth. Party. Humph! Knocking Robertson. Humph! Twenty dozen a week. Well, I should smile."

"Well, I hope he comes around again. He amuses me!"

To Open Toronto Branch

Ontario Lantern & Lamp Co., Ltd., Hamilton, Ont., announces the opening of a branch warehouse and office at 166 King Street West, Toronto. A full line of tungsten and carbon lamps will be stocked at once at the Toronto warehouse, and the business of the firm in the Province of Ontario will be handled through their new branch, with E. S. Cook in charge.

WHAT OTHER PAPERS SAY

AN OBJECT LESSON

From the Hardware Trade

The final chapter in the history of a store in one of the Northwestern States has recently been written.

Every retailer can profitably ponder the same and draw therefrom a lesson for the conduct of his own individual business.

At the time this store was forced to discontinue business, the liabilities amounted to approximately $21,000.

The final receipts from the sale of the stock and fixtures amounted to a trifle less than $1,500.

In other words, on the forced sale of this business, the final accounting showed less than a 22 per cent. realization on the indebtedness of the concern.

In the report of the final closing of the matter, two features stand out prominently.

These are first, a large percentage of unsalable and undesirable merchandise and second, a large amount of the outstanding book accounts could not be collected.

The moral is plain.

The store which buys too heavily is very likely to have an accumulation of odds and ends which are not good property. In a case like this, the thing for the merchant to do is to apply the knife in time to prevent the accumulation growing to the point where the business is swamped.

Better yet, discontinue this method of purchasing. Instead of seeing how much of an article he can buy, the merchant would seem to be on the right track who tries to see how little he can buy, proportionate to the requirements of his trade and his distance from market.

One of the greatest sources of trouble in merchandising lies in the matter of purchases. Care and sober judgment are required. It is a whole lot easier to purchase additional supplies than it is to get rid of an overstock.

Likewise the credit end of this store's affairs offers food for thought.

As has been pointed out in these columns from time to time, the indiscriminate granting of credit will in time prove a severe handicap to any business enterprise.

It is very nice to have a large volume of business but unless this large volume has a firm and stable credit basis, it is much wiser to worry along with a decreased volume, the smaller volume being upon a safe basis.

Careful attention to the matter of the opening of new accounts is essential. A carefully followed system of collections is also needed.

Have a certain time limit to your credit matters. When a customer applies for credit, follow the example of your banker and ascertain what right the applicant has to ask for credit. Having assured yourself that the risk is a desirable one, proceed to inform the applicant of the terms upon which your credit business is transacted. Inform him that all accounts must be settled in thirty, sixty or ninety days as the case may be.

When the time of settlement arrives, insist upon the customer fulfilling his part of the agreement. Where firmness is required, do not hesitate to use it. Better the loss of an occasional customer through the use of this firmness than the loss of your business through an accumulation of poor accounts.

Viewed from any angle, the history of this one store points an object lesson to every reader of what he should not do in his own business.

THE PLUGGER PAINT MAN'S SECRET

From American Paint and Oil Dealer

In a hustling eastern county seat lives a Paint Dealer known the country over for his faculty for "doing things." He never tackled a paint selling problem that he did not solve just a little better than anyone else thought possible. He never undertook a sales campaign that he did not finish with greater success than even he had hoped for. No one ever accused him of being "clever," but it was frequently said that he was a "plugger."

Last year he made a local "Clean Up and Paint Up" campaign part of his spring planning. He couldn't arouse the other dealers, so he said, "I'll go it alone." And he did. The Mayor, the Board of Trade, the women's clubs, the Boy Scouts and the School Department co-operated. The campaign "went" and "went big." It was another scalp on the belt of the plugger from the head of complacent competition.

The Editor called on this Plugger Paint Man last summer. He inquired, "What is your recipe for constant success?"

"It's simple," said the Paint Man. "When I was wearing my first pants we had some kind of a celebration in the Little Red Schoolhouse. I had to speak a 'piece.' This was it," he added, as he reached for his hat and exhibited this verse pasted inside the crown.

"If a task is once begun,
Never leave it 'till it's done,
Be the labor great or small,
Do it well or not at all."

SMALL BUSINESS STILL FLOURISHES

From Hardware Bulletin

In spite of the Government's progress in the game of "unscrambling," the average retailer still feels some way that whenever "big business" takes a slant in his direction that it means—back to the farm for him.

But the industrial and commercial developments of recent years disclose the fact that great manufacturing and mercantile enterprises are not the invincible economic forces we once thought them to be.

The firms which once dominated the iron, coal, oil and other industries now have scores of successful rivals.

The overhead expenses of big organizations equal and frequently exceed those of other firms; their economies have been largely adopted by their rivals; their tremendous stock issues call for dividends.

Thus it comes about that smaller, well managed and less top-heavy firms are able to compete with any of the so-called trusts; this they are doing.

The same thing can be said relative to the department stores There have been many conspicuous failures among them in the last two years.

One of the leading causes ascribed for these failures is the competition of the smaller stores.

The running expenses of department stores now average thirty per cent., while those of the ordinary retailer average a fraction over eighteen per cent. If he is a good manager this difference enables him to successfully meet other advantages enjoyed by his rival.

Another thing. The chain store systems, of which we have a number in this country, are not as dangerous as they seem. The regular retailer is learning how to meet this competition and continue to prosper.

Some of the most successful competitors of the chain store systems are former chain store managers who have gone into business for themselves.

It is becoming more and more apparent that the opportunities for the small business man are as good as they ever were, probably better.

To be sure he cannot do business just as his grandfather did.

MORE ROOM FOR EFFICIENCY IN STEEL TRADE

From American Metal Market

The steel trade is finding that there are more cases in which efficiency and service can be turned into money than has ordinarily been the case. Formerly efficiency in steel making was regarded as lying chiefly in producing at a low cost, but low costs do not count for a great deal in these days of high prices. Some mills are demonstrating their efficiency by being able to furnish special steel, which commands fancy prices, while other mills do not seem to be in a position to do so. For several months past there have been many cases of steel producers buying ordinary steel and then turning around and selling special steel of their own manufacture, at a very great advance in price. Such cases are still coming to light.

Another line of efficiency has been in keeping mills open for the rich pickings to be obtained on prompt deliveries. Of course the bulk of the steel tonnage is produced by mills which do not charge premiums, but have more or less a fixed price and take care of their customers in rotation, or according to their specific needs, but the majority of the smaller mills are out for premiums whenever they can obtain them. Some were more far-sighted than others, and have their order books clearer for prompt business than is the case with others.

It seems to be distinctly the case with many mills that the earnings to-day are based not primarily on low cost production, but upon ability to render service by furnishing special descriptions of steel or special deliveries. It is a time when all departments about a steel mill must be particularly wide awake.

PROPOSED BANKRUPTCY ACT

From Credit Men's Journal.

Credit Men should watch with the utmost vigilance the proposed Bankruptcy Act for Canada. This measure will be introduced at this session or at the next, and we firmly believe that it should not be allowed on the statute books of the country until the credit men from coast to coast know its nature intimately and have a thorough appreciation as to its results.

We suggest that credit men of wholesalers and manufacturers of the different provinces appoint a committee from their number to consider the proposed legislation, and that from this number one or two delegates be selected to meet the delegates from other provinces at Ottawa. They should there spend some time in discussing the various clauses of the Act, and after they have amended and reframed the draft presented by the legal men to the Government, they should interview the Government, and endeavor to have the Act passed in accordance with their views.

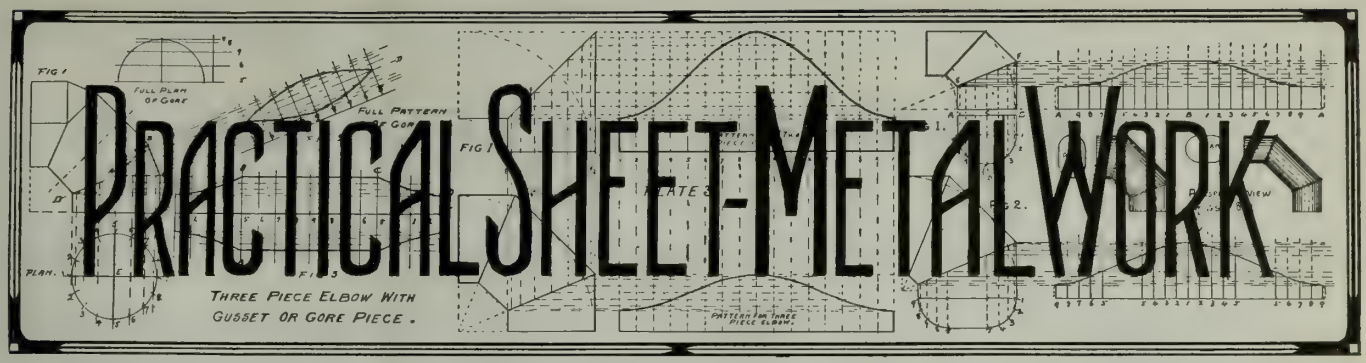
TAKING THE STORE TO FARMERS

From the Interstate Grocer.

Retail merchants of Smith Center, Kan., evolved a plan during the harvesting season which brought good results and probably put quite a crimp in the business of the mail order houses in that section. Realizing that the farmers would be too busy to come to town and, therefore, would probably order what supplies they needed from mail order catalogs, they decided to literally take their stores to the agricultural districts in automobiles.

Each machine was manned by a crew of two men, a chauffeur and a salesman, otherwise, one of the store. The auto was loaded to capacity with dry goods, groceries, clothing or hardware, as the case might be, and getting an early start, stops were made at the farm houses and orders taken and delivered on the spot. In case the farmer or farmer's wife wished something not carried in the stock, the order was taken and delivered the next day.

The plan was reported as being a success, the farmers receiving the salesman cordially and ordering liberally. One merchant reported sales averaging nearly $200 a day. Besides resulting in direct sales, the scheme helped to cement a friendly feeling between the merchants and the farmers, as the latter appreciated the enterprise of the local retailers in going out in this way after the business.



BY THOMAS STANFIELD

Fig. 1 To Trisect a 90 degree Right Angle

LET A-B-C be the right angle to be bisected. Take any point D in B-A and with B as centre and B-D as radius describe a circle cutting B-C at E. Now with E and D as centres, and with the same radius as before, draw two arcs cutting the arc DE as shown at C and F respectively. Then join BG and BF. These lines will trisect the right angle.

Fig. 2. To Construct an Equilateral Triangle on a Given Altitude

Let line X.X. be the given attitude Draw line AB. and from any point in it draw a line DC. at right angles to AB. the same length as the altitude XX. Next draw a straight line EF through C parallel to AB. Now with D as centre and with any radius less than DB, describe a circle cutting AB at G and H. Then with G and H as centres, and with the same radius describe two arcs intersecting the circle at J and K.

Now draw lines from point D to J and K, and produce them till they meet the line EF. The triangle formed by these lines is an equilateral triangle of the required altitude.

Fig. 3 upon a given line, to draw a regular pentagon.

Let line AB be the given line upon which the pentagon is to be described.

With B as centre and AB as radius, draw a circle as shown by A, C, D. Then extend line AB, cutting circle at D. Next bisect line AB at F.

With B as centre and BF as radius draw a circle. Then draw BG at right angles to AB cutting this circle at G. Now with G as centre and GD as radius. draw a circle cutting a continuation of GB at H. With D as centre and DH as radius draw another circle cutting the semi-circle A, C, D at J. Join BJ. BJ is the second side of a regular pentagon

Now bisect BJ at M. draw ML at right angles to BJ, meeting a line FL drawn at right angles to AB at L. With L as centre, and LB as radius, describe a circle which will also pass through A and J. With A as centre, and AB as radius describe an arc cutting the circle at 2, and with J as centre and JB as radius describe an arc, cutting the circle at 1. The figure 1, 2, A, B, J, is the regular pentagon required.

Fig. 4 to construct a triangle the length of the sides being given.

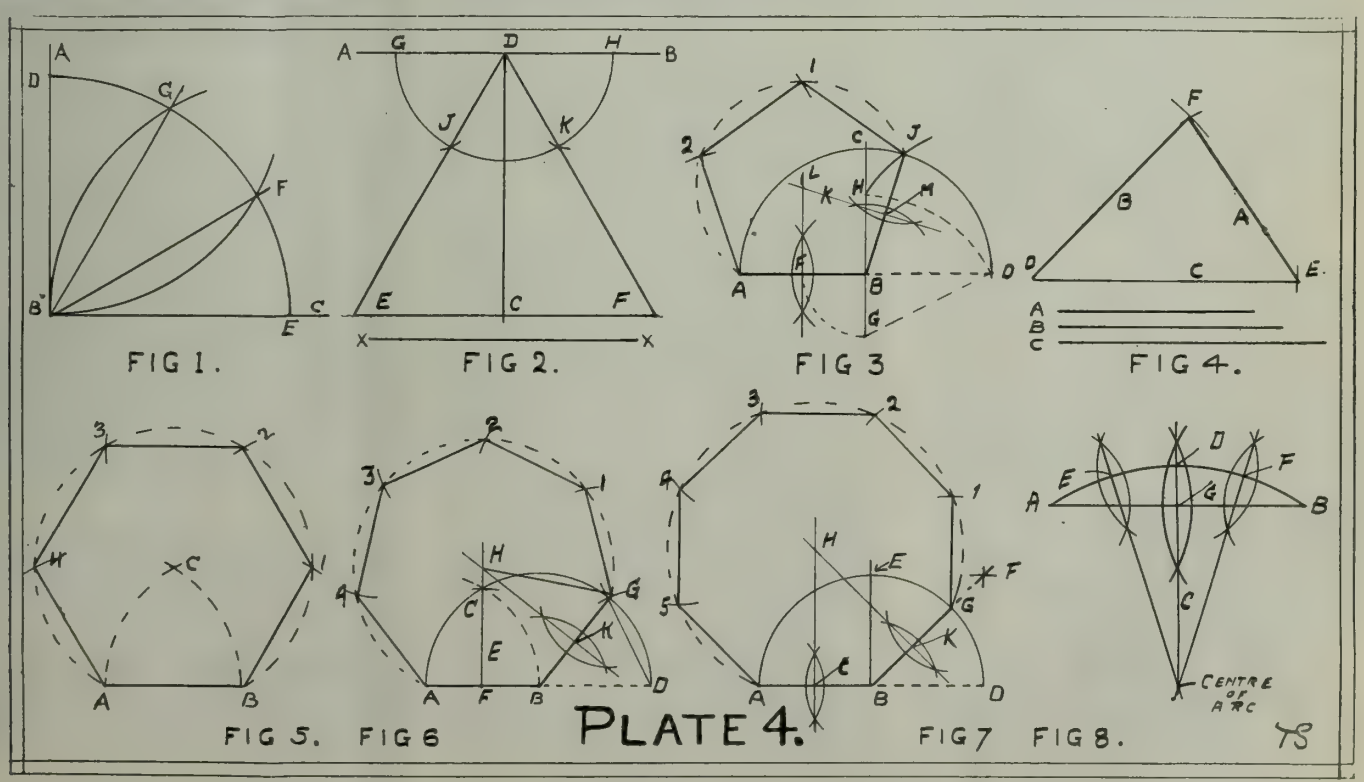
Let A, B, C, be lines of the length of the three sides of the required triangle. Draw the line DE equal in length to C. With D as centre and radius equal to line B, and with E as centre and radius equal to line A describe two circles cutting one another at F.

Then D, F, E. is the triangle required.

Fig. 5. To Draw a Regular Hexagon Upon a Given Line

Let AB be the given line. With B as centre and BA as radius, and with A as centre, and AB as radius draw two arcs intersecting at C. With C as centre, and with radius CA draw a

(Continued on page 49.)



EVENTS IN THE TRADE

To Make Silverware

Oneida Community Ltd., Oneida, N.Y. will open a plant for manufacturing silverware at Niagara Falls, Ont.

Personal

J. H. Ashdown, president J. H. Ashdown Hardware Co., Winnipeg, is at the time of writing still in a critical condition following an operation performed at Rochester, Minn., on February 10.

W. F. Macpherson, Prescott, Ont., Secretary Ontario Retail Hardware and Stove.

Chas. H. MacDougal, head bookkeeper for W. H. Escott & Co., Ltd., Winnipeg, for a good many years, has resigned and accepted the position of manager of the Canada Pure Products, Winnipeg. On the eve of his departure, the staff presented him with a gold-headed cane.

The marriage is announced to take place on Feb. 23 of Miss Jean Easson, daughter of Jas. Easson, 958 Bloor St. W., Toronto, to W. R. Dixon, hardware merchant. Sprucedale, Ont.

Western Canada Notes

J. C. McLellan, a former well known hardware man of Weyburn, Sask., but recently of Calgary, has accepted a position with Hoshal-Carmichael Co., Weyburn.

Among the western hardwaremen who are in Winnipeg for the bonspiel are Fred Doig of Glenboro, Man., who is skipping a rink; Jas. McEwen of Togo, Sask. C. S. Hill of Radville, Sask.; F. Marantz of Sifton, Man.; and A. C. Thierman of Thierman Bros., Webb, Sask.

In the fire which wiped out the business section of Bowden, Alta., on Monday last, the store of Christie & Bernard and the Barclay Hardware Store were among those which sustained loss. The general stores of William Murphy and Holliday Co. were also partially burned. The total amounted to $30,000.

The Western Canada Flour Mills Company have just completed a shipment from their Winnipeg mill of an order for flour placed with them by the French War Office for the use of their troops amounting to 500 carloads. The value of the order exceeds $1,000,000. The last lot consisting of a solid train-load left the mill a few days ago and the entire quantity moved via New York.

Mayor McBeath of Vancouver, B.C. has announced that the practice of offering chances of winning automobiles and other prizes as an inducement to the public to patronize stores and theatres, is illegal and must be stopped at once. One of the large Vancouver stores has been offering a 1916 six cylinder McLaughlin car free. For every 50c spent in the store, meats and groceries included, they gave a coupon entitling the purchaser to one chance. The person purchasing $5 worth was entitled to 10 coupons and so on.

Obituary

St. John, N.B.—The death occurred here of Daniel McNally, aged 87 years. Mr. McNally was for many years connected with W. H. Thorne & Co.

Walkerton, Ont.—Ray Vogan of S. W. Vogan & Son hardware merchants, a prominent business man, died here this on Feb. 16. He was stricken with appendicitis one week ago, and an operation performed in an effort to save his life proved futile. Deceased was thirty-eight years of age, and besides his wife, and infant son, he is survived by his parents, one brother, Sam W., and four sisters

The funeral took place on Friday afternoon.

Industrial Notes

Hespeler, Ont.—A. B. Jardine Co.'s plant, which was recently damaged by fire, will be rebuilt. Some of the machinery was badly damaged.

Toronto, Ont.—The Toronto Laundry Machine Co. will build an addition to its plant, to cost $2,800.

Toronto, Ont.—The Canada Pipe & Steel Co. will build an addition to its machine shop, to cost $3,000.

Toronto, Ont.—The Ontario Metal Products Co., have taken over the building which extends back from 50 Pearl Street to Adelaide Street. It is the intention to enlarge same with a view to further business development.

St. Catharines, Ont.—The Metal Drawing Co. will build an extension to their factory.

Toronto, Ont.—The Hamilton Gear & Machine Co. will build an addition to its plant, to cost $5,000.

Windsor, Ont.—The Universal Stove & Furnace Co. is considering the erection of a plant for the manufacture of stoves, furnaces, etc.

Business Changes

Swift Current, Sask. — Dougherty Small, have sold out to the Wetmore Hardware, Ltd.

Cupar, Sask. — The Meldrum, Ellis Shepperd Company's hardware and furniture store has been sold to F. C. Hesketh & Co.

Tara, Ont.—Walker & Merriam have purchased the hardware and tinsmithing business of McDonald & Watson.

Toronto, Ont.—C. D. Cutts, hardware has been succeeded by R. R. Woods.

Toronto, Ont.—Thos Crooks, Jr., hardware, has sold out to Ingram & McMaster.

Ayer's Cliff, Que.—Hale & Rawlins, tinsmiths, etc., have dissolved partnership, A. E. Rawlins continuing.

Rosebank, Man.—Jas. W. Tooke has sold out to T. Dennison.

Weyburn, Sask.—W. Buchanan has taken over the harness and saddlery end of the business of Fraser & Enticknap, the latter firm devoting the whole of their energies to the hardware lines. J. A. Hewitt, who has had charge of the harness department for Fraser & Enticknap, will join the staff of Mr. Buchanan. The latter is planning to take care of the wholesale trade in the Weyburn district.

Kerrisdale, B.C.—The partnership existing between T. H. Latimer and G. H. Watts, trading as the Kerrisdale Hardware Co., has been dissolved by mutual consent, and the business will be continued by T. H. Latimer. G. H. Watts will open a hardware store at 2280 4th Avenue, W. Vancouver.

Atlas Mfg. Co. Catalogue

A neatly gotten-up catalogue featuring steel shelf brackets, wire closet hooks, tinned spoons, fly swatters, fire screens, milk bottle carriers, etc., has been issued by the Atlas Manufacturing Co., New Haven, Conn. Copies will be mailed to hardwaremen on request.

Eureka Sprayer Booklet

The Eureka Planter Co., Ltd., Woodstock, Ont., recently issued a very practical 16-page booklet featuring Eureka sprayers, and giving some reliable information regarding materials, quantities, applications, etc., to use in spraying. Copies of the booklet will be mailed on request.

Twenty Years Ago
In the Hardware Trade

The following items have been taken from the issue of Hardware and Metal of Feb. 8, 1896:

"The premises of S. B. McClung and Co., stoves and tinwares, Trenton, have been damaged by smoke and water.

Editor's note: S. B. McClung & Co., are still in business at Trenton, Ont. The business of the company has grown considerably during the past twenty years. The fine new store of S. B. McClung & Co., completed early in 1914, was illustrated and described in the Fall Number (1914) of Hardware and Metal.

* * *

Vantuyl & Fairbank, Petrolea, have moved into their magnificent new store and are busy placing the stock in order.

Editor's note: The Vantuyl & Fairbanks Co., is still doing business in Petrolea.

* * *

C. A. Whitwam who was a partner and buyer for the Hamilton Hardware Co., has severed his connections with the company, and will in future be connected with a Western jobbing house. Mr. Whitwam was a partner in the firm of Black & Whitwam, afterwards Whitwam & Swanson, and this latter was fused, jointly with Ferres & Co., with the Hamilton Hardware Co."

Editor's note: C. A. Whitwam is vice-president and general manager of the Hobbs Hardware Co., London, Ont.

* * *

Some of the prices shown in Hardware and Metal's market reports of twenty years ago are very interesting with the prices in effect to-day. A few of the quotations are as follows:—Pure white lead in oil, $5 per 100 lbs.; turpentine, 46c per gallon; linseed oil, raw 55c per gallon; Paris green, casks, 13½c lb.; prepared paints, best brands $1 to $1.05 gal.; pig lead, 3¼c; bar iron, $1.55; cut nails, $2.50; pure manila rope, 9½c; sisal rope, 7¼c; barb wire, $3.12½ per 100 lbs; green wire cloth, $1.60 per 100 sq. ft.; spelter, domestic 4¾c; imported 4⅜c to 4½c and castor oil 6¾ to 7c.

INCORPORATION OF THE REMINGTON ARMS UNION METALLIC CARTRIDGE COMPANY

There have recently been rumors regarding the recent changes within the Remington-U.M.C. organization, and in order that the correct facts may be known, an official statement has been issued from the executive office as follows:—

The Remington Arms Works at Ilion, N.Y., the Remington Arms and Ammunition Works and the U.M.C. Cartridge Works at Bridgeport, the Remington-U.M.C. Cartridge Works at Windsor, Ont., Canada, the Remington-U.M.C. Cartridge Works at Brimsdown (near London, England), and the plant formerly operated by the Robin Hood Ammunition Co., at Swanton, Vermont, purchased by the Remington-U.M.C. Co., in June, 1915, were amalgamated into one corporate company under the name of "The Remington Arms Union Metallic Cartridge Company," and incorporation papers were filed under the laws of the State of Connecticut on January 15, 1916.

D. S. MORRIS

who has been appointed special store salesman for Wood, Vallance, Ltd., Winnipeg. An announcement regarding Mr. Morris' appointment appeared in last week's issue of Hardware and Metal.

The capital stock is $60,000,000 divided into 1,200,000 shares with a par value of $50 each. Of this, $20,000,000 is preferred stock paying cumulative dividends of 7 per cent., and $40,000,000 is common stock.

The new corporation will continue to operate all of the above named plants.

The officers of the company are:—M. H. Dodge, president; S. F. Pryor, 1st vice-president; C. L. Reirson, vice-president; C. C. Tyler, vice-president; I. S. Betts, vice-president; George Bingham, secretary and treasurer.

The general offices of the company will continue to occupy the 26th floor of the Woolworth Building, No. 233 Broadway, New York City. In addition to the officers above mentioned, the personnel of the executive force is as follows:

A. F. Hebard, general sales manager; H. J. Strugnell, assistant general sales manager; C. W. Many, assistant treasurer; A. H. Meyerhoff, general purchasing agent; T. L. Briggs, advertising manager

Mr. Betts continues also to act as general export manager, with Mr. Carroll Stevenson, assistant export manager.

Brockville Company Elects Officers

Brockville, Ont.—The annual meeting of the shareholders of Canada Foundries & Forgings, was held at the company's offices here last week. The following were elected directors for the current year: — F. C. Billings, Hartford, Conn.; Henry Bertram, Dundas, Ont.; John H. A. Briggs, Brockville, Ont.; F. D. Canfield, jr., New York.; John T. Dillon, Titusville, Pa.; Thos. J. Dillon, Welland, Ont.; Hon. George P. Graham, Brockville, Ont.; J. Gill Gardner, Brockville, Ont.; H. B. Hausser, Toronto, Ont.; Clarence F. Smith, Montreal, Que.; Hon. W. J. Shaughnessy, Montreal, Que.; Wm. M. Weir, Montreal, Que.

Wm. M. Weir was appointed president; J. Gill Gardner, vice-president, and John H. A. Briggs, secy.-treas.

Give Merchants Time to Sell Matches

Ottawa, Ont.—Hon. T. W. Crothers, Minister of Labor, has given notice of a bill to amend the white phosphorus matches act. The amendment will extend for six months from January 1 of this year, the time allowed during which the white phosphorus matches may be sold and for one year the time during which they may be legally used. Under the legislation of the session of 1913 the manufacture of white phosphorus matches was prohibited after January 1, 1915, and the sale after January 1, 1916. It was found that considerable stocks of these matches were still on hand at the beginning of this year, and it is deemed reasonable to allow merchants a longer period of six months to get rid of their stocks.

Evinrude Motors for 1916

Evinrude Motor Co., Milwaukee, Wis., recently issued an attractive thirty page catalogue, splendidly illustrated, featuring Evinrude motors for 1916. In addition to the single-cylinder models, a new model, the Evinrude four-cycle twin, is featured in the 1916 catalogue. A number of new features are also shown in the single-cylinder type of motors. Evinrude motors are for use on canoes, sharp-pointed skiffs, duck-boats, house-boats, sailboats, yachts, dinghies, scows, work boats, rafts, etc.

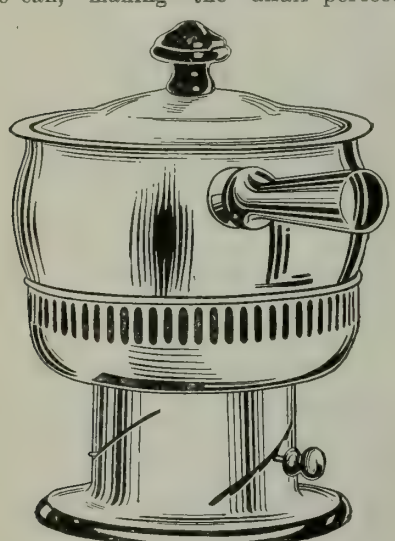
NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

STERNAU APPLIANCES

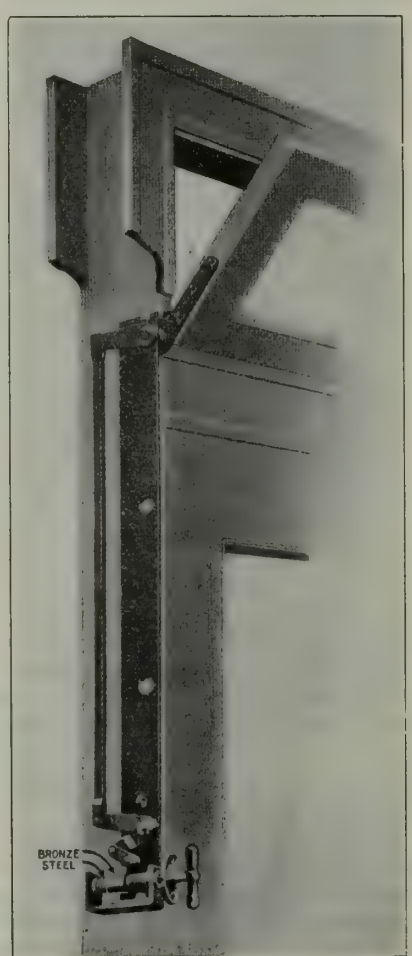
S. Sternau & Co., New York, N.Y., have recently produced a number of new appliances to be used in connection with their canned heat. The most interesting of the Sterno appliances are the "Big Three." Included are three types of boiler, ranging from a simple to an ingenious form. In each case the legs of the stand fit nicely into three grooves of the can, making the affair perfectly stable and non-upsettable. One of the accompanying illustrations shows an outfit that retails at 75c. The boiler is quart size, heavily nickeled, fitted with non-heating ebonized knob. The collapsible stand rests within the boiler when packed for traveling.

Sternau Outfit to retail at $1.50



Sternau Outfit to retail at $2.50

The outfit which retails for $2.50, is also shown in one of the accompanying illustrations. This outfit is said by the makers to be the most ingenious of the "Big Three," a handsome boiler and stand with ebonized base and equipped with a wind shield and flame control. The makers state that it is not subject to flickering even in a strong, breeze. The heat is quickly adjusted to suit the present need.



Rixson Concealed Transom Operator

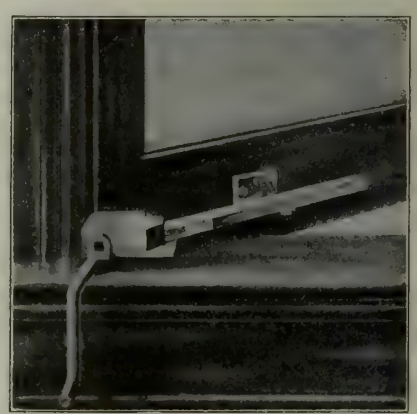
Still another outfit, is one that retails for $1.50. The globular boiler is made of solid brass, heavily nickeled and polished. The cover is also of brass. The boiler has non-heating ebonized handles and is supplemented with a fine satin finished serving tray.

Sterno canned heat, used in the appliances described in the foregoing is a pinkish substance, which looks and feels like cold cream and is guaranteed by the makers to be safe in handling, as it is non-explosive. It will burn for over one hour, it is claimed, and can be lighted over and over again. F. W. Lamplough & Co., Unity Building, Montreal, are Canadian representatives.

RIXSON OPERATORS

The Oscar C. Rixson Co., 501 South Jefferson Street, Chicago, Ill., offers to the Canadian trade the Rixson casement operator, and the Rixson concealed transom operator, here illustrated.

The manufacturers in announcing the Rixson casement operator state that the increased use of windows swinging out has created a demand for a device that would enable a person to open or close the window without opening the fly screen which must of necessity be on the inside, and would lock the sash automatically in any position. One of the accompanying illustrations shows the operator in use. On account of the screw mechanism used, a window equipped with the device is always locked in whatever position it is left, and cannot be moved except by turning the handle and when closed the window is held absolutely tight. The makers state that the mechanism being of the screw type develops ample power to handle almost any kind of windows. The driving screw is of steel with double square threads. The traveler that runs on the screw is of cast bronze, thus avoiding the danger of the two parts rusting together. The slide which runs inside the arm is covered with fibre, which makes the device noiseless and also eliminates friction. The device can be concealed below or placed on top of the stool. It is equally effective whichever way it is used, and swings the window wide open (90 degrees).



Rixson Casement Operator

(Continued on page 54.)

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

Another heavy budget of price changes has been announced this week by hardware wholesalers and manufacturers. Most of the price changes are in an upward direction, and have been freely predicted in HARDWARE AND METAL during the past few weeks. The announcement of Canada's second war budget this week has cleared the atmosphere to a considerable extent, as some firms, despite recent predictions to the contrary, have been of the opinion that the general protective tariff would be further increased. The new tax on oils will not affect the hardware trade to a very great extent. Among the price changes this week are advances on rope, wire, screen cloth, drills, fancy butts, hammers, farm bells, roofing materials, iron washers, copper rivets, lead, tin, copper, spelter, liquid cement, wire. Sheet window glass has declined 10%. Some paint manufacturers have already put into effect the advances in price which had been announced to become effective March 1. Business is improving and collections are very satisfactory. Jobbers are experiencing difficulty in securing supplies of some lines.

MONTREAL

MONTREAL, Feb. 18.— Activity in the general lines of the hardware trade continues. There is evidence that in the country the retailers are not only inclined to buy early but they are substantially increasing their demands; in the city the spring buying is not yet in evidence but a fair business is expected later. The performance of the metals, with copper at the highest point in forty years, is the feature of the week and there are general advances through the list. As regards heavy goods, such as manufactured iron and steel, there is a steady demand but there is an absence of the feverish buying of January when advances were being so rapidly made; dealers appear to have protected themselves pretty well and are not much inclined to speculate further with the market at such a high level. So far as actual improvement in the situation is concerned there is little or none. Some small shipments are being received by dealers but for the most part orders are being filled from stock and while this continues adjustments to higher prices must be expected to continue from time to time.

While copper has led the metal advance with an additional increase of 3c, spelter has made a strong showing and both lead and tin have also advanced. British demand for copper for munitions purposes seems to be the main factor in the whole movement and predictions are not wanting that the top has not yet been reached. Copper and brass products are very firm and higher prices are predicted. In brass and bronze lines of builders' hardware there appears to be some difficulty in getting deliveries and should a demand arise for these lines materially higher prices may be looked for.

In the steel field there is another advance on galvanized wire with other wire products likely to join in the movement before another week; nails are also very firm. Terne plates have been advanced and there are general readjustments of chain prices as between American and Canadian manufacture. Poultry netting staples are higher and on an entirely new basis. Other items showing advances are: copper rivets and burrs, iron washers, rope, drills, spring hinges, fancy butts, bathroom fixtures, certain types of hangers, saw-vises, spoons No. 900, farm bells, hammers, liquid cement, roofing materials of various kinds, and some items in the scrap metal list.

While the general prediction of higher prices for steel and iron manufactures still holds, fence wire and nails apparently stand out for early action. Manufactures of copper and brass may also be expected to go up. Copper rivets and burrs are said to be slated for an early increase. Rubber hose will undoubtedly be higher on spring quotations.

Tin on the Advance.—The firm situation in tin referred to in recent reports of the local market has been followed by pronounced strength and an advance of half a cent is recorded. New York reports that there has been renewed domestic buying at a time when the foreign situation began to taper off. Strength has been due to this buying which seems to be largely the effect of sympathy with the general upward movement of the metals evident for the past two weeks; at the same time it is generally recognised that tin can stand on its own feet at the present quotations. Supplies are now coming freely but there is a chance that this may not continue as there is evidence of certain difficulties in getting permits of shipments from the Straits. Besides if Great Britain should feel a shortage she would seize upon certain cargoes which now have to report at London before coming to New York. Montreal quotation: 47-47½c,—firm.

Copper Goes Up and Up. — Copper continues as the sensational feature of an activity general through the metal markets and gains on the local figures of 2 cents since last report are recorded. London is still the chief factor in the advance and dealers are wondering where the movement will end. It would appear from the recent developments that the war estimate of the consumption of the metal has been under-rated and even the big 60,000 ton order of the British Government has not been sufficient to balance the increased consuming demand. Producers report that they are turning down orders for early delivery and if second hands have supplies to meet the demand they are evidently holding off for higher prices Altogether the situation is one of the most strained in the history of the copper trade and although the present price level is the highest in the past forty years predictions are not wanting that there will be further gains before the top is reached. Montreal quotation: 32-32½c—strong and advancing

Lead Goes Up Again — Lead well maintains its advancing movement and the local quotations have been marked up another quarter cent. This increase has come with another advance on the part of the American Trust and late reports from New York are that the market is strong at an advance. The good demand for metals generally is a strong factor for firmness and the Trust appears to be getting all the business it can handle although few orders are appearing on the open market and their volume is, therefore, rather difficult to judge. It is considered that further advances are likely as the position of the metal is regarded as low compared with copper,, spelter and antimony. Montreal quotations: 8½-8¾c—strong

Spelter is Strong. — Although there has been no advance on the spelter quotations of a week ago, the market is very strong and higher prices are predicted. New York has shown an advance of 1 cent since last report and though the demand there is not so great as for some other metals the producers

are making but light offerings and are evidently endeavoring to take advantage of the present high market in relation to their futures. Montreal quotation: 23½- 24c—very strong.

Antimony Steady. — The antimony market is comparatively steady on the nominal advance of 5 cents reported last week. New York reports large arrivals recently but that there is apparently very little of this antimony for sale, the result being that prices are slightly higher than at last writing; futures are also very firm. Montreal quotation: 50c, nominal.

Zinc and Aluminum. — The upward movement of sheet zinc continues in line with spelter and this week's quotations are up 1 cent—to 31 cents for casks and 31½ cents for part casks. Aluminum is somewhat firmer at the nominal quotation of 68c in sympathy with the American market where small advances are recorded.

Solder Remains Steady.—The solder situation remains without change worthy of mention. Quotations for commercial half-and-half are 27-28c and for strictly half-and-half 29c-30c.

Iron and Steel Situation.—The end of the upward movement in the manufactures of iron and steel does not yet appear to be in sight. Some small deliveries of manufactured steel are being secured from the mills, but for the most part orders are being filled from stock and as these stocks become exhausted the tendency towards higher levels will continue. However, the feverish demand of a month ago is not in evidence and the trade which has evidently fairly well protected itself is not showing any general disposition to load up on a speculative basis, particularly when there is some question as to the extent of the consuming demand. Higher prices are being quoted on wire and on chain. The fact that American mills turning out such products as wire, sheets, plates, shapes, etc., are reported to be sold out until the end of the year would indicate that a marked or permanent improvement in the situation is not to be looked for for some time. However, prices are admittedly higher and if there are further advances they will come more slowly than during the heavy buying movement.

Copper and Brass. — With the continued upward movement of copper the position of copper and brass products is moving to abnormally high levels. Changes in bars, sheets and wire and not recorded this week but predictions are that advances may take place within the week. Certain lines of builders hardware are also likely to be materially affected.

Sheets and Plates.—Prices of sheets and plates are unchanged for the week but dealers state higher prices are to be looked for. Orders continue to be filled from stock and supplies are getting so low that adjustments are forced from time to time. Boiler tubes and pipe may continue to be considered in the same class.

Terne Plates Higher.—An advance of 25c has been made on charcoal terne plates which are now quoted: Dean or I G grade—I C 20 x 28, 112 sheets, 216 pounds,$9.75; 200 pounds, $9.50. There is a more substantial advance of 50c and $1.00 on the Cokes, bright, quotations now being: Bessemer steel, I C, 14 x 20 base, $5.25; 20 x 28, double box, $10.50.

Galvanized Wire Higher. — Further advances have been made on the quotations for galvanized wire, prices being raised 10 cents. This follows another change of wire prices in the United States where $2.00 has again been added to the ton quotation. New figures are:

No. 9 coil spring	$4 15
No. 9 plain galvanized	4 10
No. 12 plain galvanized	4 25
No. 13 plain galvanized	4 35

Nails May Go Higher. — With this further advance on galvanized wire, it may be expected that other wires and nails will again move to higher levels. Pittsburgh reports that nails are quoted $2.30.

Barb Wire.—Although in the advance in wire prices this week, barb wire has not been affected, a higher quotation may be looked for as barb is included in the advances made this week in the United States.

Wire Cloth Up Again.—Following the advance on wire cloth referred to last week, there has been still another increase in the price announced. The painted screen in one hundred foot rolls is now quoted at $1.87½ as compared with the last price of $1.75.

Poultry Netting Staples. — Material changes are announced in the prices and basis of quotations for poultry netting, both list prices and discounts being altered. The following summary now covers the situation: Galvanized 100 lb. kegs, list price $12.00, discount 40 and 12½ per cent.; bright add $1.10 to galvanized net. 50 lb. kegs add 30c to each; 25 lb. kegs add 40c and 10 lb. kegs add 80c.

Boat Nails Higher.—Boat nails have been affected by the upward movement of wire products. The discount on the galvanized is now 17½ per cent. and on the bright 30 per cent.

Chain Market Unsettled. — Owing to material advances in the price of American chain the situation as between that product and the Canadian make has become very unsettled. Wholesalers are evidently adjusting their prices to their own stocks without much respect to the market. The result that quotations are nominal for the time being with considerable difference between the figures given by different houses.

Copper Rivets and Burrs.—With the further advances in the cost of copper, another change has been made in the quotation for copper rivets and burrs or rivets with the usual proportion of burrs 15 per cent. is now added where formerly they were net: and for burrs only 30 per cent added as compared with 20 per cent. formerly.

Iron Washers Advance.—Another advance on iron washers has been announced, the new discount being 35 per cent. as compared with the former discount of 42½ per cent. This discount is on the full box basis and there are extras for smaller quantities.

Rope Still Higher. — The upward movement of rope like that of the metals seems to have no limit. The latest increases are 1 cent for pure Manila and ½ cent for British Manila and African hemp and for lath yarn. New quotations follow:—Pure Manila, 21c basis; British Manila, 17c basis; African hemp 17c basis; Single lath yarn, 13c basis; Double lath yarn, 13½c basis.

Drills Again Higher. — Still higher prices have been announced on drills, practically the whole list being affected in the change of discounts. Items which indicate the new bases follow:

Bit stock drills, 60 per cent.; Wood drills, 30 per cent.; Straight shank drills 60 per cent.

Spring Hinges Go Up. — New and higher prices are announced on spring hinges. Quotations per gross now are Number 5, $18.60—advance 60c; Number 20, $9.75—advance $1.25; Number 50, $24.—unchanged; Number 51, $10.-20—advances 60; Number 120, $18.60—advance $1.20; Number 2255, $19.20.

Builders Hardware.—Although there has been no marked improvement in the demand for builders hardware, dealers report that there is some difficulty in getting deliveries from the makers. This appears to be due to the fact that the output of brass and bronze fittings have been light, probably owing to the high cost of the raw materials. Anything like activity in such lines with copper at the highest level in forty years would undoubtedly result in immediate and substantial advances in prices.

Fancy Butts Higher.—A number of lines of fancy butts which do not come into the general trade have recently been advanced in price. This is evidently the direct result of the rising cost of copper and other raw materials.

Lead Pipe Very Firm. — With still another advance in lead, the market for sheets and pipe and other products of that metal is very firm. Quotations are $10.50 for lead pipe and $11.50 for lead waste pipe.

Bolts and Screws Very Strong.—The prediction is made on good authority in the trade that there will be further advances in bolts and screws and that these are likely to be of a substantial character. The rising cost of raw material is no doubt the controlling factor in this market.

Bathroom Fixtures Higher.—The cost of bathroom fixtures has been advancing with the higher markets for raw manufacturing materials. One wholesale house announces that there have been increases of about 10 per cent. put into effect this week.

Rubber Hose to be Higher.—With the general upward movement of rubber manufactures there comes a report that there will be materially higher prices for rubber garden hose next season.

Some Hangers Advance.—The prices of some of the brands of hangers handled in the trade have been advancing recently under the influence of the higher

cost of manufacture. Atlas and Stearns are two of those which have been affected.

Saw-Vises Higher.—New and higher quotations are now in effect on saw-vises. Number 80 is quoted $4.00; number 81, $6.50 and number 95, $7.90.

Table Cutlery. — A popular line of table cutlery known as Number 900 spoons has again been advanced. New quotations are: table $3.70; tea, $1.85 and dessert, $3.50.

Farm Bells.—A local wholesale house announces an increase in the prices quoted for farm bells. New quotations are: A $4.30 each, B $3.00 each and C, $2.55 each.

Hammers are Higher. — There have been general advances recently made throughout the list of hammers and these have embraced a great many sizes and varieties. The increase can be directly traced to the higher prices prevailing for the raw material entering into their manufacture. The present increase appears to be generally about 5 per cent.

Roofing Papers and Materials.—Recent adjustments have been made in the prices quoted for different roofing papers and materials, sheathing, etc. Following are new quotations:

Resin sized fibre per roll, 44c; Tarred fibre, good luck 64c; Dry fibre, 52c; Sheathing, Shield, dry, 35c; Sheathing, Shield, tarred, 43c; Sulphate, Black Cat, dry 60c; Sulphate, Black Cat, tarred 80c; Liquid roofing cement, 22c.

Utensils. — Although there is no change in the quotations for utensils this week, the advances in the metals of the past two weeks have had the effect of creating a very strong situation and higher prices may be necessitated on this account. Reports indicate that there is a very fair business being done in these lines.

Old Materials.—As the upward movement of the metals continues there are corresponding increases in the market quotations for scrap. New quotations this week are as follows:

Brass, heavy 12¾ c lb.; Brass, light 11c lb.; Copper, heavy 20½c lb.; Composition, No. 1, 16c lb.; Composition turnings 13½c lb.

TORONTO

TORONTO, Ont., Feb. 17.—The introduction of the war budget last Tuesday has cleared the air, as the extent of the new legislation is known, and there are no tariff changes proposed with the exception of a tax on petroleum, fuel and road oil.

That a change in the tariff was anticipated in some quarters is indicated by the record Customs receipts in Toronto. Some houses had also been buying fairly heavily, but largely as a precautionary measure. The chief feature of the war budget is a business tax on financial, industrial, transportation and other corporations, and also on munitions firms. In the case of the above, the tax is 25 per cent. on net profits since the beginning of the war in excess of 7 per cent., while on individuals, partnerships and associations, with a capital of more than $50,000, the tax will be the same except that 10 per cent. will be allowed instead of 7 per cent. The proposed legislation may possibly be amended in some details, but in the main it will no doubt go through. Manufacturers of hardware and some jobbers will be affected by the tax, but whether it will affect prices is difficult to say. The fact that prices have been for some time and are still going up may induce manufacturers and others to absorb the extra cost. The tax of half a cent per gallon on petroleum fuel oil will not affect other varieties of oil, such as lubricating and illuminating oils. Petroleum fuel oil is used extensively for farm tractors and oil engines, and in industrial plants, on steamships, etc.

More Price Changes.—There has been as usual a number of price changes made during the week, and others are contemplated. The steady increase in cost of practically all raw materials is exerting a widespread influence and causing considerable uncertainty in hardware circles. A large number of products, composed either wholly or partly of steel, are being affected, with the result that prices continue to advance, and deliveries are getting more backward. The ingot metal markets are again strong, and copper, tin, spelter, and antimony have all advanced. Cost of production is increasing, and there is no indication of any cessation in the advance of prices. The market looks as if it had not by any means reached the highest level. Deliveries from manufacturers in certain lines show no improvement, but rather an indication that conditions in this respect will be worse. The price changes this week include Manila, hemp and sisal rope, wrought butts, heavy and light tee strap hinges, boxwood rules, hand saws, boiler plates, copper rivets, plate washers, pressed steel spikes, plate glass, cotton and wool waste, whiting, babbitt metal, steel squares, hammers. Higher prices for wrought iron pipe, both black and galvanized, are looked for, while copper ware, tin ware, enameled ware, and galvanized ware are expected to advance.

Steel Market Strong.—The steel market is very strong, and prices continue to steadily advance. The steel companies have so much business that they are getting more behind than ever on deliveries. The production of bars for shells is sold up practically for the rest of the year. The scarcity of steel is getting more acute, and there is a great possibility of a famine in steel products. The supply of steel from the States is almost entirely cut off, throwing the entire demand in Canada on the Canadian mills, while in addition there is a large export demand. The announcement that the Canadian Car & Foundry Company will reopen the Welland plant is an indication that the domestic trade of Canada is getting back to more normal conditions. It is stated that the company has orders on the books to keep the plant operating at capacity for many months. The output will consist of reinforcing bars, flats and angles, while in addition shell steel will be produced. The report for the past year issued by the Nova Scotia Steel & Coal Company shows that this concern had a record year, and has made large profits. The steel industry was never before in such a sound position. As already intimated, prices on a number of steel products have been advanced, and include the following:— Boiler plates, ¼ to ½ in., have advanced 25c, and are now quoted at $3.20, with heads at $3.45 per 100 lbs. Tank plates, 3/16 in., are now quoted at $3.55 per 100 lbs. Pressed steel spikes, ⅝ in. diameter, are now quoted at $3.75 per 100 lbs. Higher prices have been announced for proof coil and electric weld coil chain. The new discount on plate washers is 32½ per cent.

The large steel mills in the States are sold up on heavier products for the rest of the year, and some business has been booked for plates and shapes for the first quarter of 1917. The United States Steel Corporation reports unfilled orders on hand on January 31st at 7,922,767 tons compared with 7,806,220 tons on December 31st. The heavy demand for steel bars continues, both for export and domestic consumption, and prices are largely nominal, depending to a great extent on delivery. Wire rods are scarce and higher, $50 per ton having been offered for Bessemer or open-hearth rods for shipment in two to three months from date of contract. It is reported that a sale of 2,000 tons of Bessemer rods was made recently by a Pittsburgh mill for export to Canada at $45 or higher. There is no improvement in the billet situation, and it is causing considerable anxiety to consumers. Open-hearth billets have advanced, and are now quoted at $35 per ton Pittsburgh.

Pig Iron.—The market is quiet, but prices are firm and unchanged. The demand for steel making pig is heavy, and there is some improvement in demand for foundry grades.

Old Materials.—The situation in this market is unchanged. There is a good demand for copper and brass scrap, and prices are higher, being about 1c per pound above last week's level. Business is fairly good for other metals, and the market is firm.

Machine Tools.—The situation in the machine tool market is unchanged, the demand being lighter, but steady. Conditions in the States are affecting the local market. A number of important manufacturers in the States have advanced their prices 10 per cent. on nearly all machine tools. Prices now are approximately 25 to 60 per cent. higher than they were a year ago. Deliveries have improved, but are still backward.

Metal Market Strong.—The influence of the London market is being felt locally, and higher prices have to be noted for copper, tin, lead and spelter. As regards copper, the situation is abnormal, and there is little doubt that considerably higher prices will be reached. Tin at the present figures is reasonable, and may go higher as the market is affected by freight rates and insurance, the latter having recently gone up.

Spelter, as in the case of copper and tin, advanced in London, with the result that prices locally have advanced. The "Trust" price for lead is higher, and local quotations have advanced slightly. Antimony is higher, and quotations nominal, while aluminum is firm at last week's figures. Solders are unchanged, but firmer in sympathy with the tin market. There is a very fair demand locally, and stocks on hand are light.

Copper Very Strong.—The abnormal situation in the copper market continues, and prices have again advanced. The advance in London caused a sensation in that market, and was due to a scarcity of metal. No one can say where the market will stop, but it is generally believed that prices will go considerably higher. Producers have practically control of the situation owing to the enormous demand, which promises to increase rather than otherwise. Copper locally has advanced 1c, and quotations are nominal at 30c to 31c per pound.

Tin Higher.—The market is higher, following an advance in London. Tin is reasonable at present prices, and may go still higher, as insurance rates have recently been increased. There has also to be considered the possibility of shipments being lost at sea, although at the present time the visible supplies are fairly heavy. Tin has advanced 1c, and is quoted at 47c to 48c per pound.

Spelter Strong.—The market is firm and higher, both in London and New York, due to improved demand principally from the brass mills. Zinc ore is quoted from $95 to $118. Joplin, Mo., spelter has advanced 2c, and is quoted at 25c to 26c per pound.

Lead Up.—The market is quiet, but firm, at higher prices. The "Trust" advanced prices to 6.25c New York, and the market is firm at that figure. Lead is quoted locally at 8¼c to 8½c per pound.

Antimony.—The market is very strong and higher, with prices nominal. Spot metal is very scarce, as is also March delivery. The demand has greatly improved; the Dominion Government has recently concluded a large purchase of Chinese antimony, which has had the effect of strengthening the market. Local quotations have advanced 2c, and antimony is quoted at 47c per pound.

Aluminum.—The market has strengthened by reason of a better demand, but prices are unchanged at 68c per pound.

Solders.—Prices of solders are unchanged, although an advance may be expected in the near future owing to increase in strength of the tin market. Fair business is reported at prices given in the current market quotations.

Boiler Plates Again Advance.—The increase in prices of and scarcity of steel has caused another advance in boiler plates, which are now quoted as follows: Plates, ¼ to ½ in., $3.25; heads, $3.45, and tank plates, 3/16 in., $3.55 per 100 pounds. The market is very strong and further advances may be looked for.

Copper Rivets, New Discount.—Owing to the extraordinary high price of copper, makers of copper rivets have been obliged to advance prices. The new discounts are as follows:—Copper rivets, with the usual proportion of burrs, list plus 15 per cent., and burrs only are list plus 30 per cent.

Babbitt Metal.—The cheaper grades of babbitt metal have advanced, as the cost of raw materials entering into their manufacture is considerably higher, and more so in proportion than the metals composing the higher grades. The latter may advance, however, but the range of prices covers so many grades and different mixtures that higher prices are less probable than in the case of the cheaper grades, which represent a minimum level.

Galvanized Sheets Firm.—The market is very firm at the higher prices quoted last week. The situation continues irregular and uncertain, as a result of conditions in the spelter market and steady increase in cost of black sheets. Galvanizing plants in the States are still operating at considerably reduced capacity owing to the unfavorable conditions prevailing in the trade. The cost of raw materials, sheets, spelter and acid is so high that there is very little profit being made by makers of galvanized sheets.

Tee and Strap Hinges Up.—Prices of heavy and light tee and strap hinges have been advanced, the new discounts being as follows:—Heavy hinges, 27½ per cent., and light hinges, 57½ per cent. The previous discounts were 33 1-3 and 65 per cent. respectively.

Boxwood Rules Advanced.—Manufacturers of boxwood rules have advanced prices, but the new list has not yet been adopted.

Wrought Butts Higher.—Manufacturers of wrought butts have again advanced quotations, and the probable resale prices will be as follows:—Nos. 804 and 840, 57½ per cent.; 800 and 838, 50 and 5 per cent.; 808, 50 per cent.; 814 and 810, 45 per cent.

Rope Very Strong.—Prices of rope have again advanced, and the market is very strong. The record prices for rope which now prevail are a result of extraordinary conditions which prevail in the raw material markets. There is a great scarcity of Manila and stocks in the hands of importers are very light, while the difficulty of obtaining tonnage and high freight rates have caused the situation to become acute. Sisal prices are unchanged, and the situation is easier than in the case of other fibres. By reason of the advances in all other fibres, sisal is now the cheapest of all the leading fibres. Russian hemp quotations are still unavailable, and great difficulty is being experienced in getting tonnage for Italian hemp. All Italian twines have advanced 3c, and jute twines 1c per pound. The following are the new prices, but a further advance is looked for:—Pure Manila has advanced 1c, and is now quoted at 21c per pound. British Manila and African hemp have advanced ½c, and are both quoted at 17c per pound. Lath yarns have advanced ½c, and are quoted at 13c for single and 13½c for double. The above are basis prices for ⅝ in. and larger.

Waste Higher.—Prices on practically all grades of cotton and wool waste have advanced, due to increase in cost of raw materials. Prices are ¼c to ¾c higher, and are given in the current paint market quotations.

Wire Cloth Advance Confirmed.—Last week an advance in wire cloth was reported, and probable prices published. The advance has now been confirmed, and the new prices for black wire cloth are as follows:—In 100 feet rolls, $1.87½ and in 50 feet rolls $1.92½ per 100 square feet.

Wire Nails Firm.—The market continues strong, and wire nails are very firm at $3.15 per keg base. There is no improvement in the wire rod situation; prices are high and rods scarce, with deliveries very backward. Higher prices for wire nails are looked for. Cut nails are firm and unchanged at $3.20 per keg base.

Kitchen Utensils.—Owing to the continued increase in cost of raw materials, especially ingot metals, higher prices are looked for almost immediately in copper ware, tin ware, enameled ware and galvanized ware. Steady business is reported in these lines, and the market is very firm.

Wrought Iron Pipe.—The market is very firm, and another advance in both black and galvanized pipe is expected in the near future on account of the steady increase in cost of raw materials. Prevailing prices are given in the current market quotations.

Iron Washers Advance.—There has been a change in the discount on iron washers, the new discount being 37½ per cent., as against 40 per cent.

Hand Saws Change.—Hand saws have advanced 10 per cent., and are now quoted net list.

Wire Clothes Line.—Prices of wire clothes line have been revised, and are now quoted as follows:—No. 17, 7-strand, $5.30; No. 18, 6-strand, $3.75; No. 19, 6-strand, $3.25 in 50 and 100 feet coils; No. 18, 6-strand, $3.95 in 1,000 feet coils, including reels.

LONDON

LONDON, Feb. 15.—Business conditions are just fair at the present. Snowfalls have increased the sales of some winter lines, but have also helped to keep people indoors. The merchants are taking an early delivery of spring bookings.

Linseed Oil.—There has been no change in the prices of linseed oil, but the market is firm and quotations are as follows:—Raw, 1 to 2 bbls., $1.02 per gal.; 3 to 5 bbls., $1.01 per gal.; 6 to 9 bbls., 99c per gal. Boiled, 1 to 2 bbls., $1.05 gal.; 3 to 5 bbls., $1.04 gal.; 6 to 9 bbls., $1.02 gal.

Turpentine.—No change has been made in the price of turpentine, and quotations locally are as follows:—1 bbl. lots, 87c gal.; 2 to 4 bbls., 86c gal.; 5-gal. lots, 94c.

White Lead.—The lead market is very firm. Pure lead in oil in ton lots, $11.45 per 100 lbs.; less than ton lots, $11.75 per 100 lbs.

Glass.—Owing largely to the cutting of prices among dealers, there has been a general decrease in the price of glass of 10 per cent. The lower price has not resulted from a cheaper market price. Quotations are: Single diameter, 30 and 10 per cent.; double diameter, 30 and 10 per cent. Cut lights, net list. Following are the net prices of glass figured at 30 and 10 per cent.:

	Per Case. Single Diamond	Double Diamond
Up to 25 in.	$4 92	$ 7 50
26 to 34	5 14	8 10
35 to 40	5 36	8 57
41 to 50	7 40	9 77
51 to 60	7 73	9 99
61 to 70	8 25	10 58
71 to 80	9 30	11 57
81 to 84	....	14 33
85 to 90	....	15 35
91 to 94	....	15 75
95 to 100	....	18 27
101 to 105	....	20 16
106 to 110	....	23 31

Fence Wire Higher.—Galvanized wire has gone up 10c per 100 lbs. Quotations are: Barb, $3.85; No. 9 galvanized, $3.50; No. 12 galvanized, $3.65; No. 13 galvanized, $3.75; 9-coil spring, $3.55; O and A, No. 10, $3.46; O and A, No. 11, $3.53; O and A, No. 12, $3.60; hay baling, No. 14, $3.70.

Nails show no change. Wire quoted at $3.15 base; cut, $3.10 base.

Fence Staples.—No change has yet been made in price of fence staples, and quotations are as follows:—Galvanized, in kegs, $4 20; galvanized, 25-lb. boxes, $4.45; bright, kegs, $3.35; bright, 25-lb. boxes, $3.60.

Rope has Advanced.—Pure Manila rope has advanced 1c per pound, while British Manila and African hemp are also up a ½c. Pure Manila is selling at 21c base; British at 17c base, African hemp at 17c base. Deep sea line is quoted at 27c; cotton, 3-16, 25c; cotton, ¼ inch and larger, 24c.

Copper Rivets Go Up.—An advance of 15 per cent. is recorded in this class of goods. Copper rivets are now quoted at 15 per cent. above list; copper rivets, with usual proportion of copper burrs, 15 per cent. above list; copper burrs only, 30 per cent. above list.

Screen Wire.—An advance in price is given in these goods. Painted screen cloth is quoted at $1.87½ for 100-foot rolls; $1.92½ for 50-foot rolls. Bronze cloth is quoted at 8c per sq. ft.; less than rolls, 9c sq. ft.

Iron Washers Up.—The new discount quoted is 37½ per cent. off list, instead of 40 per cent., as formerly.

WINNIPEG

WINNIPEG, Man., Feb. 17.—The Winnipeg bonspiel is in full swing, and the past week has seen a great many visitors from out of town, and it would seem as though everyone were doing their best to make the visitors welcome. There are a great number of hardwaremen who are either skipping among the visiting rinks or playing in some other position and from all accounts they are holding up their end of the game in every good style.

Orders Improved. — The number of orders now coming through the mails show some improvement over last week, but there is no doubt that the continued cold weather and the number of hardwaremen away from home will still keep business on a moderate basis for another week or two. Reports which the various jobbers have received from their salesmen would indicate that business is going to come along with a rush, and jobbers are making preparations accordingly.

Danger of Shortage.—It is to be feared, however, that some of the retailers have put off specifying their Spring needs until the jobbers stocks become rather depleted. The jobbers are in some instances experiencing great difficulty in getting delivery of repeat orders and this may cause considerable inconvenience to the retailers throughout the country.

Supply of Bolts. — One line which may be affected is the supply of the various lines of bolts. The rods from which these are made are very hard to get at the present time and very few, if any orders, have been shipped by the manufacturers since the latter part of last year. It will easily be seen from this the position the jobbers and retailers are likely to be in should this condition exist for another two or three months.

Advances Expected.—There seems to be some reason to believe there will be an advance in the prices of churns, washing machines and wringers. Another line on which further advances are to be expected is glass. It appears that some of the chemicals and other raw materials used in the manufacture of glass has shown an exceptional increase in price, and manufacturers are experiencing all kinds of difficulty in getting delivery of same. Under the circumstances it would seem good policy for the retailers to place their orders now for window glass, lamp chimneys and lantern globes for later shipments In this way, the jobbers will be able to cope with the situation somewhat better than as though they had no record to go by.

New Situation in Paper.—It may be of interest to the various retailers to know that Sweden has placed an embargo on the export of wood pulp to Great Britain. This means that Great Britain will have to look to Canada and the United States for their supply, and as the pulp and paper industry in Canada to-day are enjoying greater business prosperity than ever before, it may mean that with the increased demand various lines of building paper, and roofing will be due for an advance in price. There is no doubt that the Canadian manufacturers will take advantage of the new market, and if necessary increase the size of their plants to meet the new demand. This, however, will take some time, and increased prices may go into effect at any date.

Other changes and the new prices are as follows:—Iron Set Screws 55 per cent. discount; Stove Bolts, 70 per cent. discount; Cut Nails, 3.85 per cent. base; Tire Bolts, 50 per cent. base.

PRACTICAL SHEET METAL WORK

(Continued from page 41.)

circle as shown by the dotted lines. With AB as radius draw successive circles using B, 1, 2 and 3 as centres, cutting the circle at the points 1, 2, 3, 4 respectively. Next join B1, 12, 23, 34 and 4A. These lines will form a regular hexagon with sides all equal to the given line AB.

Fig. 6. Erect a Regular Heptagon on a Given Line

Let AB be the given line. With B as centre and AB as radius draw a circle, extend line AB to cut this circle at D. Next with A as centre and with AB as radius draw an arc cutting the previous circle at C. From C draw CF at right angles to AB cutting AB at F.

Next with FC as radius place the point of compass at D and draw an arc cutting the first circle at G, by drawing line, from B to G, the second side of the heptagon is developed.

Now bisect line BG at K and at right angles to it draw KH intersecting FC, produced, at H. With H as centre and HG as radius draw a dotted circle as shown. By using the length of line BG as radius draw arcs on dotted circle, thus dividing it into five more parts. By connecting these points described the desired heptagon is developed.

Fig. 7. Draw a Regular Octagon Upon a Given Line

Let line AB be the given line. First bisect AB at C. Next draw a circle with B as centre and BA as radius. Extend line AB to cut this circle at D. From B draw BE at right angles to AB cutting the circle at E, and with E as centre and EB as radius draw an arc and with D as centre, using same radius draw another arc cutting the first arc at F. Now draw a line from B to F. Cutting the circle at G. BG forms the second side of a regular octagon.

Now bisect line BG at K, and from C and K draw CH and KH at right angles to AB and BG, meeting at H. With H as centre and HG as radius draw a dotted circle, dividing same with length of line BG into equal parts as shown 1, 2, 3, 4, 5. Now draw lines from points G1. 12, 23 and so one until all are connected, this will complete the desired regular octagon.

Fig. 8. To Bisect a Given Arc

Let AB be the given arc. Join AB and bisect the straight line AB at G. Then draw GD at right angles to AB, cutting the arc at D. The arc AB is then bisected at D. Similarly if required the arcs AD, DB may be bisected at E and F and the arc AB will thus be divided into four equal parts.

Canada Metal Co. Sales Convention

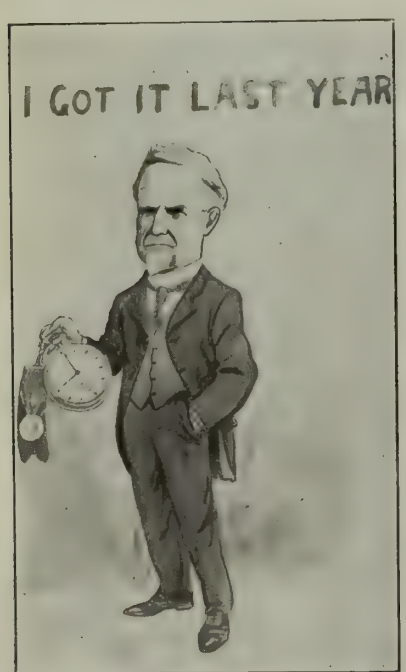
President of Company Refers to Bright Outlook for 1916 Business—Winners of Competitions—Subjects Discussed at Convention Meetings—Value of Staff Conventions.

THE fourth annual convention of the sales staff of the Canada Metal Co., Ltd., was held at Toronto last week. The business of the past year was reviewed, and plans outlined for the future.

W. G. Harris, Sr., president, delivered an address of welcome, and spoke of the

W. G. HARRIS
President of the Canada Metal Co.

satisfactory results attained during 1915. Mr. Harris described how at the beginning of the year contracts had been received from the Government for bullets, and while it was a new line to commence with, it required efforts to deliver two or three tons a day, yet by the end of the year the capacity was one hundred tons per day. This, Mr. Harris merely mentioned to illustrate what could be accomplished by sticking to it.



A. E. BYERS
of the Sales Staff, was a prize winner last year.

Continuing, he stated that there was every indication that 1916 would see the greatest revival in trade conditions that Canada had known. First of all in looking at our own results, said Mr. Harris, in January the best report for any one month during the last four years was presented, and more business booked up for future deliveries than ever before.

The Roll Call

Twenty-two answered the roll call. The vice-president of the company, W. G. Harris, Junior, presided, and in his address of welcome referred to the pleasure it was for all to meet once more under such favorable conditions after a strenuous year. He congratulated all upon their success, for independent of war contracts the results for general sales for 1915, made the year stand out as the biggest and best in the firm's history. Mr. Harris said in part: "The year opened out under very unfavorable circumstances, yet everyone set out with the determination to make good and this determination was crowned with success, and when we begin to ask what are the prospects for 1916, indications are that it will be a bumper. The reasons are easily seen when we know that merchants everywhere tell us that business is booming. Farmers have had a record crop, at big prices, with big demand at home and abroad. Stocks of manufactured material are short, and labor is in great demand. Exports largely exceed imports. Factories are busy, a great many working overtime. More freight cars are needed, and steamers are taxed to capacity. Canada, has, in proportion to population, greater exportable surplus of wheat this year than any other country in the world. Millions of dollars are passing over the merchant's counters."

Winners of Competitions

The first session was taken up with a review of the sales for 1915, and presentations to the winners of the various competitions. S. Prevost was the winner of the gold watch and chain, value $150, which is the first prize for Harris Heavy Pressure Babbitt Metal sales. The presentation was made by Mr. Harris, Sr., who said that it was a year of many surprises, for in March the sales for H.H.P. were 25 per cent. above the record of April, 1913, and along came June with another record of 20 per cent. above March, and again December 30 per cent. above June. The year 1916 was opening out with promises of trade expansion and brilliant prospects and pretty tall records had to be beaten.

In making the presentation, Mr. Harris said it was a great pleasure to see such a close finish, and on presenting the second prize, a cheque for $25 to Mr. Matthews, he wished him better luck next time.

Another pleasing feature noted by Mr. Harris was that during 1915 every salesman had been successful in winning at least one competition.

Subjects Discussed at Convention

Tuesday was a day of discussion and papers were read on various subjects.

WM. G. HARRIS, JR.
Vice-President of the Canada Metal Co.

such as the rolling of sheet lead, its possibilities and the advantages of rolling to small sizes to assist the hardwareman. Demonstrations were given in the sheet lead rolling department, so as to give the salesmen a practical knowledge of the various processes.

Another interesting paper was given upon "How I make an agent and assist

H. C. CROW
Advertising Manager, was one of the busiest men at the Convention.

the hardwareman to make a connection for babbit metals.

Another which was well received and was full of useful information, "How I assist the hardwareman who carries plumbers' supplies."

This brought out another interesting discussion upon the subject "What is a Salesman. His duty to his firm and his relation to the customer." This was concluded by one of the Western representatives reading the following:

What Is a Salesman?

When your train pulls in and you grab your grip,
And the hackman's there with his frayed-out whip,
And you call on your man and try to be gay,
And all you get is "Nothing doing to-day!"
You're a peddler—
By gad, you're a peddler!

When you get in town and call on your man,
"Can't you see any, Bill?" "Why, sure I can."
You size up his stock, make a rough count—
"Bill" presently says, "Send the usual amount!"—
You're an order-taker;
By gad, you're an order-taker!

When you travel along and everything's fine,
You don't get up until half-past nine,
You see each concern and talk conditions,
Then write it all home with many additions,
You're a traveling man—
By gad, you're a traveling man!

When you call on your trade and they talk "hard times,"
"Lower prices" and "decided declines,"
And you talk and smile, make the world look bright,
Then send in your orders every d——d night,
You're a salesman—
By gad, you're a salesman!

—By G. A. McG...

One day was taken up in outlining and discussing competitions for the ensuing year. The company put up $1,500 to be competed for, and the competitions, which H. C. Crow first inaugurated nearly five years ago have proved both interesting and successful. For 1916 a few specials are offered which give every salesman an opportunity to prove his ability in some special line.

Friday was confined purely to the western trade and dealing with the exceptional conditions which have arisen in the West.

Luncheon was served daily in the new dining hall in the factory. Each day an inspection was made of the new showroom and of the various departments which have been added during the past year. Practical demonstrations were given illustrating the manufacture of brass goods by taking the ingot metals to the brass foundry and after being cast in the brass foundry taken to the brass finishing department. Salesmen were shown the various processes from ingot metals to finished products. Each department was treated in a similar manner.

In concluding the convention, Mr. Harris, Jr., referred to the benefits of conventions for salesmen. Conventions promote good fellowship, and give the salesmen a better knowledge of the factory and the goods manufactured. Mr. Harris referred to the great possibilities which will continue to exist during 1916. Mr. Harris advised the salesmen to plan their work carefully and to remember that a man is paid for what he finishes, not for what he starts.

Sales Convention of Beatty Bros.

All Branches Represented at Convention Held at the Head Office—Demonstration of Sale a Feature—Slogans Featured on Bulletin Board Daily —Addresses by Salesmen

THE second annual sales convention of Beatty Bros., Ltd., sales staff was held at the head office, Fergus, last week.

Salesmen were present from the firm's branches at St. John, N.B.; Montreal, Winnipeg, Edmonton. Eight salesmen attended from Western Canada, including the Western sales manager, M. Quick.

The convention was characterized by great attentiveness throughout. A keen desire was evidenced by every salesman to learn all he could about the products manufactured by the firm. All spoke optimistically regarding the outlook for business during 1916.

Talks were given by the sales managers, department heads and salesmen.

D. G. Harrison, of Lennoxville, Que., gave an exceptionally interesting talk on selling water bowls. W. A. Fitzsimmons, of Ottawa, spoke for a couple of hours on selling steel stalls. H. A. Rutherford, of Brampton, spoke on selling stalls.

An actual sale was demonstrated at the convention by three of the salesmen. One salesman acted as the farmer who was in the market for a manure carrier. Another salesman took the place of the local dealer, while a third salesman represented the B. T. salesmen from the factory.

The head office was appropriately decorated for the occasion. The walls were draped with bunting. Large photographs were shown of jobs, in various parts of Canada, equipped with product made by the firm.

A bulletin board was placed at the front of the speakers' platform. Twice daily carefully lettered cards, bearing slogans were placed on the bulletin boards. Some of the slogans were as follows:—"Business Provides the Sinews of War," "Booming Business Keeps Cannon Booming," "Why Should German Pumps be Sold?" "Capture and Destroy the Enemy," "Orders Tell Like

WEEKLY PAINT DEPARTMENT

High Costs Won't Affect Quality

Manufacturers of Paints Have to Pay High Prices for Raw Materials—Reputable Makers Will Continue to Make Highest Quality Goods

SINCE the outbreak of the war, supplies of a number of raw materials used in making ready-mixed paints have become very scarce.

Costs of many other products are abnormally high and manufactures to-day are paying tremendously high prices for many raw products used in paint making.

Of course there are some firms who had the foresight to cover themselves as far ahead as possible, but even with this precaution, manufacturers who wished to keep up the quality of their products, have had to pay long prices for raw materials and from present indications will have to pay high prices for some time to come. The result of the high costs of raw materials has naturally been reflected in the prices of the finished product and ready mixed paints to-day are much higher in price than they were prior to the war. Still higher prices are announced to go into effect at the end of the present month.

Lead, zinc, oil, turpentine, dry colors are all quoted at high figures. Even the labels and tin containers are costing considerably more to-day than they did prior to the outbreak of the war.

The cost of paint to the dealer at present is low when the present costs of raw materials are taken into consideration.

Keep Quality Up

There is one important phase of the paint situation which the retail trade should not lose sight of, and should not fail to impress upon customers, especially those who might complain about the high price of paint. It is, that the paint manufacturers, with few, if any exceptions will keep up the quality of their products, and will not sacrifice quality in order to keep down the price. Even though the consumer may have to pay more for ready mixed paints during the coming spring, than he has been accustomed to paying in past years, he can rest assured that the quality is right, and there is a great deal of satisfaction in buying and selling a product that is reliable.

Manufacturers Careful

In paint-making the purity of the raw materials is tremendously important, and it is the aim of every manufacturer who is conscientiously trying to make a good paint line to live up to a high standard of purity and excellence, to safeguard carefully the quality of the raw materials that enter into their finished products.

This is a matter that demands strict attention owing to the variations in the methods of manufacture by the various concerns producing the raw materials.

Other Important Factors

But purity and uniformity are not the only important factors in paint-making. It is possible to take flour, butter, eggs and other necessary ingredients all of the very best quality, and still not make a good cake, but the good cook who knows how to use the ingredients may take the same proportions and ingredients and produce a good cake that is exceedingly palatable.

No matter how good the leather a poor shoemaker cannot make a good pair of shoes. The same rule applies to a poor tailor who, although he may have the best grade of cloth and thread, cannot produce a good suit of clothes. So in dadition to having the right raw materials, another big factor in paint-making is to have a manufacturer who knows how, and who has the facilities for putting the materials together in correct proportions, and combining them in the right way. So there enters into paint-making the work of the experienced chemist, the practical paint man and his equipment of special machinery to give the best results.

Test for Purity

After the paint manufacturer has assembled his raw materials in his storage rooms, it is necessary for him to have them tested for purity and to see that they are uniform in quality and up to the standard, as necessary according to the formulae used by the manufacturer for each particular product that he produces. This is where the chemical laboratory plays an important part in the modern paint manufacturing plant.

High Class Goods

The manufacturer of ready-mixed paints or varnishes must turn out high class products or there is nothing ahead but failure for him. The retailer who has the agency for a reputable brand of ready-mixed paint can rest assured that he is selling a product much superior to anything that could be mixed by hand.

Important Industry

The paint industry in this country is a very important one. With the growth and development of the paint business, there has been a consistent advance in the method of manufacture.

The best prepared paints on the market to-day represent the results of years of careful experiments, carried on by experienced chemists and practical paint men. The amount of money expended by the leading paint manufacturers in

(Continued on page 54.)

THE "CLEAN-UP, PAINT-UP" MOVEMENT

Meetings are already being held in various cities in Canada for the purpose of getting "Clean Up and Paint Up" movements under way. One of the most successful meetings was recently held at Montreal, and plans are already under way for boosting the 1916 *campaign. The object of the "Clean Up and Paint Up" movement is to have Canadian cities and towns each year set aside a week—preferably between May* 1 *and May* 15*—for a general public and private "Clean Up" in their section; to engender a spirit of enthusiasm in the public mind by advertising extensively the five-word slogan, "Clean Up and Paint Up." Everybody, old and young, to be asked to lend a hand for a few hours at least, to help put every street, alley, yard, cellar, passage-way, back lot, and corner in good trim, and to make conditions such that they will have a brighter, cleaner and more wholesome place to live in. The "Clean Up and Paint Up" Movement promotes cleanliness, thrift and civic pride, and is worthy of the support of every hardwareman.*

Owning and Operating P. D. DODS & CO., LIMITED

carrying on experimental work during the last decade or two has run into many thousands of dollars.

All these careful investigations, both scientific and practical, all these tests and experiments, have in some measure standardized the business of paint-making and to-day certain important materials are recognized as being those which one must use in order that a prepared paint may give the most satisfactory results.

Among the most important ingredients of good paint are pure lead, pure zinc, pure linseed oil, pure turpentine, and the necessary coloring pigments and driers.

All the foregoing are now exceedingly high in price, but the retail trade can rest assured that the reputable manufacturers will continue to turn out the highest quality goods, despite the high costs of raw materials.

WEEKLY PAINT MARKETS

(Continued from page 56.)

very firm and unchanged. The linseed oil situation has improved, but prices are unchanged and firmer.

Linseed Oil Firmer.—The market is firmer this week, but prices are unchanged at the same range as last week. The flax seed market at Winnipeg is firmer, but there is no movement of seed from the West. Argentine seed does not appear to be affecting the local market to any appreciable extent, partly owing to shortage of tonnage and also as regards price, which at the present level will not materially affect the situation. There is very little movement in oil at present, but an improved demand is expected next month. The market is firm, with no indication of prices declining. The following prices are being quoted in Toronto for linseed oil:

	Raw.	Boiled.
1 to 2 barrels	$1.02	$1.05 per gal.
3 to 5 barrels	1.01	1.04 per gal.
6 to 9 barrels	0.99	1.02 per gal.

Turpentine Steady.—The market has been remarkably steady for several weeks, and quotations are unchanged. There is very little demand for turpentine, and stocks are very light. The market is steady at Savannah, and business there is dull. The following prices are being quoted on turpentine in Toronto:—1-barrel lots, 87c; 2 to 4-barrel lots, 86c, and 5-gallon lots, 95c per Imperial gallon.

Glass Goes Down.—A decided change in the glass situation has developed during the week, and new discounts for both plate and sheet glass have been announced. Higher prices for plate-glass have been expected for some time, as the makers have been advancing their prices and no revision has been made recently locally. The new discount on plate glass is now 35 per cent.

As regards sheet glass, the position is somewhat complicated, for prices have been lowered in the face of higher costs. The opinion has been held in the trade that the price of glass was too high since the last advance went into effect, and that it would tend to stimulate business if prices were lowered for a time, especially in view of the light demand which exists at present. The discount on sheet glass is now 30 and 10 per cent., as against 30 per cent. formerly. There has been some price-cutting on glass during the past few weeks, but it is expected that the new reduced price will be firmly maintained.

White Lead Firm.—The market is very firm in sympathy with the pig lead market, which continues moving upwards. It is not at all improbable that white lead may advance again, notwithstanding the present high level.

Mixed Paints.—The announcement of the advance in prices, due to take effect on March 1, has caused considerable activity in the demand for ready-mixed paints, as business has been very brisk all this month. Raw materials are still high and likely to advance, which may result in a change in the proposed schedule.

Gasoline.—The market continues very strong and higher prices may be announced any time. The consumption of gasoline is on the increase, and the supply is not equal to the demand, as the production of crude oil is not increasing in the same proportion. Gasoline is unchanged at 28½c, and benzine at 28c per gallon.

Whiting Advances.—Prices of whiting have been advanced; the new quotations are as follows:—Paris, white, $1.50; plain, $1.25, and gilders, $1.40 per 100 pounds.

Putty.—The market is quiet and demand light. Prices are very firm, but unchanged. The following prices are being quoted for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, in casks	$2.65
Bulk, in 100-lb. drums	2.85
Bulk, in 25-lb. drums	2.95
Bladders, in barrels	3.25

Pure putty, 70c per 100 lbs. advance.

FLOOR STAIN EXTRAORDINARY

When William H. Evans, of Montreal, was making a tour of the Turpentine district in the Southern States, he attended one of the criminal sessions where a "Moonshiner" was on trial. Noticing the dark mahogany - like splashes on the Southern red pine floor, Mr. Evans remarked to the colored janitor, "Josephus, is this varnish stain or oil stain, the application seems a bit faulty?" Joe replies, "Boss, 'taint neither oil or varnish. Hit's good ole Vàginny Plug Terbacker juice." Evidently the anti-spitting law was not in force in that assize court!

F. C. Graham, representing the Codville Co., Winnipeg, at Moose Jaw, has been laid up for ten days, but is now back on the road.

NEW HARDWARE GOODS

(Continued from page 44.)

Concealed Transom Operator

The company also makes a concealed transom operator. The operator can be applied to transoms hung at bottom, centre, or top. It will also operate several transoms placed one above the other.

The operator is of simple construction with screw mechanism. The device is made of cold rolled steel, with every bearing bronze-bushed. The operators are furnished with either tee or crank handles. The handle can be located in any position on the casing. Catalogs and descriptive matter will be supplied by the manufacturer on request.

PUSHED APPLIANCES AND SOLD THEM

(Continued from page 38.)

The Christmas trade in this line developed well last year. Possibly the war caused people to wish to combine utility with ornamental value in their giving. At any rate people who wish to make a really smart Christmas present now frequently turn to electrical goods for it.

In this bad year our sales of electrical appliances were four times those of any preceding year. It was because some other lines fell off and we had to make up the deficit by pushing something else. We chose electrical goods. We pushed them. And we sold them.

SALES CONVENTION OF BEATTY BROS.

(Continued from page 51.)

Shots on the Enemy, Keep Firing;" "It is a Patriotic Duty to Sell Labor-saving Machinery to the Canadian Farmers." A number of new propositions on different lines for 1916 were enthusiastically endorsed by the salesmen.

The convention lasted all week, and the salesmen left for their respective territories determined to send 1916 sales away beyond any previous record.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Feb. 18.—Since the announcement of an advance to be made in ready-mixed paints of 10c on colors and 15c on whites, to go into effect on the 1st of March, there have been certain developments in the situation as regards raw materials and certain tendencies of selling policy between different manufacturers made evident, which have resulted in unsettled conditions. Generally speaking, the tendency of the market for raw materials has been to higher levels, and on this account some of the local paint houses have found that conditions do not warrant a postponement of the advance until March 1, and have already put the new schedules into effect. Another manufacturer will make the change next week, and others on the 1st of March.

The explanation of the different policies which have been adopted appears to be in the selling methods employed, and Hardware and Metal understands that there is not the discrimination as between different customers which might at first be implied. Some manufacturers book earlier than others. Those putting on an early campaign find that practically all their customers have had an opportunity to fill ordinary requirements, and they have evidently made the immediate advance to prevent buying for speculative purposes at prices which are not warranted by the cost of production. Others with later campaigns are holding off their advances to give all regular customers a change to book for ordinary requirements at the old prices. This difference between early and late campaigns has been emphasized by the fact that some manufacturers sent out notice of the impending advance by mail and secured direct specifications, while others have preferred to wait until their representatives have had a chance to call. One firm goes so far as to state that with certain customers who have not been called upon there will be protection offered on usual requirements even after the 1st of March if the traveller on the territory has not been able to call earlier. Altogether, there is evidence that the manufacturers are endeavoring to extend to customers in the trade all possible advantages, considering the extraordinary conditions prevailing.

Business during the week has continued very satisfactory, with indications that retailers are not only appreciating the position of the market and booking earlier, but that they are ordering more freely than a year ago; prospects for consumption appear to be better. Retailers who have protected themselves for visible requirements appear to have taken the wise course, for the present indications are that there will be further advances in mixed paints at the end of the present campaign unless there is some material reaction in the prices for raw materials—and such a reaction is not indicated.

Shortage of Chemicals.—The shortage of chemicals, to which reference was made last week, is having the effect of materially advancing the market prices of certain dry colors and colors in oil. Prussian and Chinese blues and chrome yellows and greens will command much higher prices, while some other shades of blues are also advancing. Lampblack has shown further material advances and black paints are affected in sympathy. Following are some new quotations based upon the cost of raw materials, but some difference may be found as to the date when they will be put into effect:

Dry Colors—	Cents per lb.
Imp. green, 100-lb. kegs	22
Chrome green, pure, kegs	35
Brunswick green, pure, kegs	11
Drop black, pure, dry	12
Chrome yellow, 100-lb. kegs	30
Golden ochre, 100-lb. kegs	06
Spruce ochre, 100-lb. kegs	03
Colors in oil—	
Chrome yellow, pure	35

White Lead Very Firm.—With a further advance in pig lead the tone of the white lead market is very firm on the last advance, the base of $11.30 for ton lots being well maintained. Under the circumstances a further advance in the price would be warranted, but an increase may be avoided on account of the easier situation in linseed oil, and the fact that the trade has been pretty well protected as to its needs, and the market is comparatively quiet.

Linseed Oil.—As indicated last week, there has been a more general recession from the high level of the linseed oil market, and this has resulted in a narrowing of the range. The principal quotations are now $1 and $1.03 and $1.03 and $1.06, for raw and boiled respectively, and these figures are generally firm, the flax market having recently been somewhat stronger again.

Crude Oils.—The announcement at Ottawa that there will be a new war tariff on petroleum fuel oil of half a cent a gallon will undoubtedly affect a number of oils handled to a greater or less extent in the hardware trade. However, at writing, definite details had not been received, and no readjustments had been made.

Turpentine.—There is an easier tendency noted in the turpentine market, and some quotations have been reduced a couple of cents a gallon. The figures are now generally 80c to 82c on a single barrel basis, although some firms have not yet reduced their old figure of 84c. The usual allowances are made for larger quantities.

Gasoline and Benzine.—The situation in gasoline and benzine continues firm, without change in quotations. Predictions are still heard of probable advances, but the following figures are still in effect:

Gasoline, in barrels	29c
Gasoline, in drums	26½c
Gasoline, tank wagon	26c

Benzine 1c lower.

Glass and Putty.—Glass continues very firm, but there is practically no change in the situation. Putty is steady at the following quotations:

Bulk in casks	2.55
Bulk, 100-lb. drums	2.75
Bulk, 25-lb. drums	2.85
Bladders in bbls.	3.15

Pure putty, 70c advance above these figures.

DEVELOPMENTS IN PAINTS

New and important developments have occurred in the paint markets during the past week The higher prices, which it was announced would go into effect on or before March 1 have in some cases become effective. The Montreal paint market report on this page gives a summary of events to date.

TORONTO

TORONTO, Ont., Feb. 17.—Business in the paint trade has been very active so far this month, due to the retailers taking advantage of present prices and covering for their requirements before the advance goes into effect on March 1. Prices of all raw materials continue high, and in some cases scarce; in fact, the shortage of raw materials is causing some uneasiness among manufacturers. There is a growing scarcity of anilines and chemicals, and prices are entirely nominal.

Important Changes.—A change has been made in prices of both window and plate-glass, the former being reduced, but the latter is higher. Whiting has advanced, but putty is unchanged. Gasoline and benzine are unchanged, although higher prices may be announced any time, as the crude oil situation shows no sign of improvement. White lead is

The Plan of Campaign for 1916

"A Big Spring Drive"

The plan of campaign to bring more customers, increased business and larger profits to Martin-Senour Dealer Agents is now under way.

Last year our extensive publicity campaign was the most successful ever attempted by paint and varnish manufacturers in Canada. Furthermore, it was the only paint advertising campaign of a national character that was carried out during 1915.

Our plans for 1916 are more extensive. The successful policy which was so aggressively pursued during 1915 will be continued to an even greater extent. Attractive trade-pulling advertisements will appear during March, April and May in upwards of four hundred publications, including newspapers, magazines, farm and religious journals, reaching altogether nearly two million readers.

These advertisements will tell a true story of Martin-Senour quality and service. They will be so conspicuous as to dominate the pages on which they appear, and will result in influencing trade where Martin-Senour products are carried.

Important to Martin-Senour Dealer Agents

Copy of our big consumer spring mailing feature has already been sent you. We have made provision to have this sales promoter go into the home of every prospective paint and varnish consumer in your locality, provided you supply us with the names.

Don't overlook the Special Extra Feature for Wood Lac Stain dealers.

Mailing lists are pouring in on us, and will be acceptable until March 1st. We have planned to reach these consumers just before the big Clean-up, Paint-up Season.

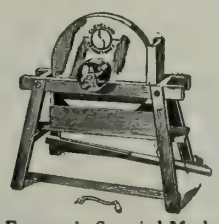
Branches at 48 Colborne St., Toronto, Ont., and 167 Pender St. West, Vancouver, B.C.

Like the onward march of the glacier, the force of example is irresistible, but infinitely slow. Advertising, however, is like the snowstorm that covers the country in a single night—but don't forget that if you want to keep the country covered you have got to keep the snow falling or the heat of competition will melt it.

The Only CLEVELAND TRUE GRINDSTONES Berea Grit

You know that Berea Grit is the best abrasive in the world. Then, why not sell the old grindstones which are made of it—the grindstones which are absolutely even in grit, specially selected for your customers—



Farmer's Special Model

Cleveland Grindstones

Sold only to Hardware and Implement Dealers.

Write for illustrated descriptions of the many models, and copy of our famous book, "How To Keep Mail Orders At Home." Tell us your jobber's name.

It's New
It's Good
It Sells

Three good reasons why you should buy and recommend to your customers

UNIVERNISH **the one varnish for all purposes**

Put up in attractive boxes of twelve quarter pints to retail at 25c. each. Also put up in all the regular larger sizes.

It brushes freely—It flows out smooth—It does not thicken after the can is opened, and it does not clog the painter's brush. It has greater covering power than any other varnish and gives a most beautiful finish—Equally good for any purpose. Manufactured only by

WINNIPEG and CALGARY

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

FACTS

We can perform more functions by our modern wire carrier system, and with a greater degree of dispatch and certainty than can be accomplished by any other of this type of machine, all of which means that we can reach more points in a store and do so in a better and more satisfactory manner than has been accomplished heretofore. Remember our ten days' trial. You are invited to put us to the test.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

WANT VALUE FOR YOUR MONEY?

Then investigate the proposition offered you by the American Broom Works.
Better brooms were never made—and the prices will interest you.

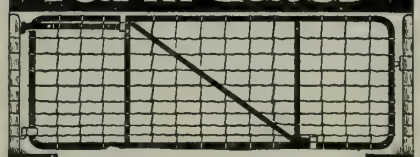
PEERLESS Farm Gates



THERE is no guess work in the manufacture of Peerless gates. The points of greatest strain are scientifically calculated and then we design braces, stronger than actually necessary, to make our gates stiff and rigid—they simply

Can't Sag or Twist

They embody only the best materials. Frame-work of 1¾ inch steel tubing electrically welded together. Peerless pipe braced gates are all filled with No. 9 Open Hearth galvanized steel wire—built for strength and durability weather proof and stock proof.

Send for free catalog. Ask about our farm and poultry fencing, also our ornamental fence and gates. Agents nearly everywhere. Agents wanted in open territory.

The Banwell-Hoxie Wire Fence Co., Ltd.
Winnipeg, Man. Hamilton, Ont.

In Demand

There is a good demand for a reliable, inexpensive Sprayer. Meet this demand and give your customers that come-back satisfaction. You can do this with the

EUREKA
Glass Tank Sprayer

The receptacle of this Sprayer is an ordinary Crown Fruit Jar (one quart size), equipped with a heavy zinc cover.
The pump cylinder is made from L. X. tin and is considerably longer than the ordinary glass tank Sprayer. The solution comes into contact with zinc and brass only, which will not easily corrode, thus giving longer service. This Sprayer is strongly made and attractively finished, and is excellent for spraying potatoes, small shrubs and all disinfectants in poultry houses and on live stock.
Our prices are in your favor and our quality pleases customers. Let us send you our descriptive catalogue. Write—

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance): 2c per word first insertion, 1c per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

"NORCROSS" Cultivator-Hoes and Weeders

A class of garden tool that's rapidly replacing ordinary hoes and weeders. Users recommend them to their neighbors because more work and better work can be done in less time.

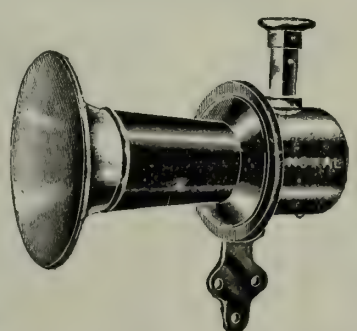
They are imitated (as all good things are) but far from being equalled in quality and service.

BOOSTING THEM MEANS BOOSTING YOUR SALES AND PROFIT.

A postal will get you our 16-page interesting cultivation booklet, with address of nearest Canadian jobber.

C. S. NORCROSS & SONS
Manufacturers
Bushnell Ill., U.S.A.

HARDWARE DEALERS, ATTENTION



Costs you $2.80 **Retails at $5.00.**

A new line for the hardware-man. **Get our large catalogue showing a full line of Automobile Accessories** at prices that sell.

BIG PROFITS. STEADY TRADE.

The results must be increased business for you.

ARE YOU READY TO TAKE CARE OF THIS INCREASED BUSINESS?

SHERWIN-WILLIAMS PAINTS & VARNISHES

A FINISH FOR EVERY PURPOSE

THE SHERWIN-WILLIAMS Co. of Canada, Limited: Montreal, Toronto, Winnipeg, Calgary, Vancouver, Halifax, N.S., London, Eng.

"I am at loss to find words to express my admiration for this wonderful piece of mechanism. I have a large collection of rifles, but I shall never again shoot any other but the Ross. I killed two powerful bulls, in under ten seconds, off-hand, at four hundred yards, each shot once, and both fell dead in their tracks."

Ralph Edmunds,
Lawyer
Idaho Falls, Idaho.

The above extract indicates a few reasons for the great prestige enjoyed by the Ross .280 Sporting Rifle. Accuracy, low trajectory and tremendous power make it an ideal big game rifle.

The Ross .303 Sporting Models are also very popular. They are well finished, accurate and hard hitting guns, superior to anything of their own price on the market. They shoot the easily obtainable .303 British Ammunition.

The demand for the Ross .22 Cadet Rifle is daily increasing, as hundreds of people are taking up target shooting. This rifle is the official arm for Canadian Cadet Corps, and is therefore a safe, reliable and accurate weapon.

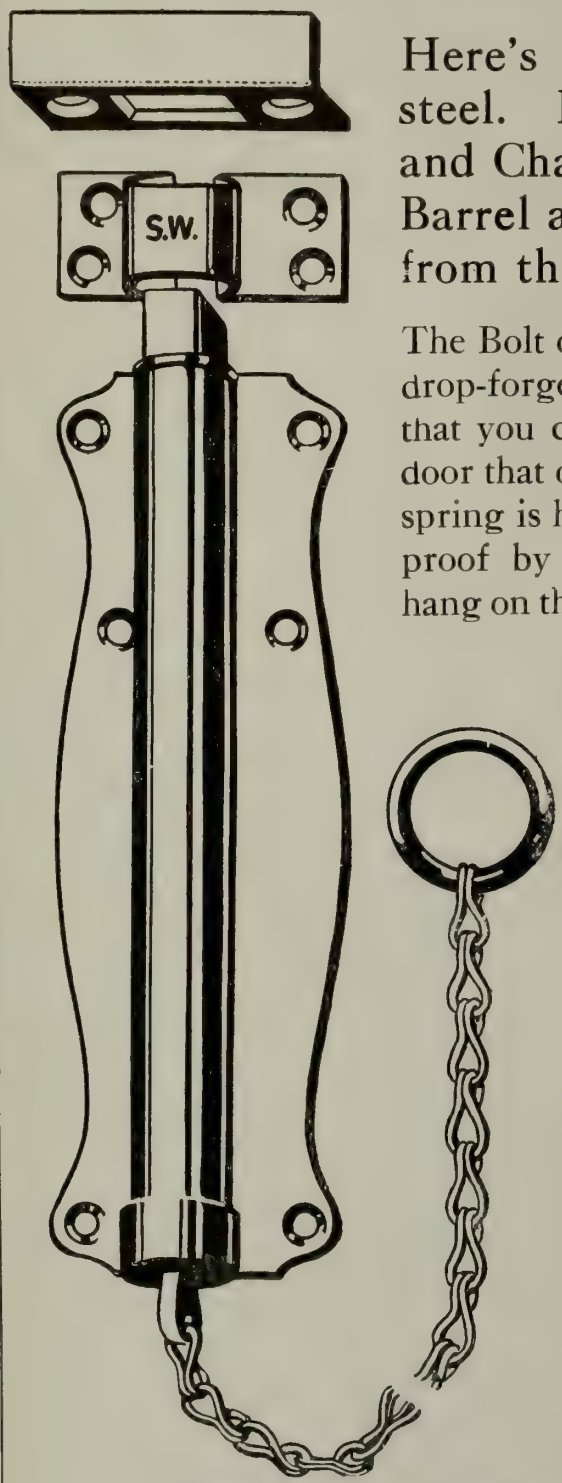
Every Double Door Needs A Foot And Chain Bolt



No. 1055. Cut half size of 10-inch

Here's a pair of Bolts made of wrought steel. Let the doors slam, Stanley's Foot and Chain Bolts don't know how to break. Barrel and plate are formed from the same sheet of steel.

The Bolt of No. 1055 is a solid bar of drop-forged steel. It is reversible, so that you can sell the same bolt for a door that opens either in or out. The spring is heavy piano wire made rust-proof by sherardizing. You could hang on the chain without breaking it.

The parts where you press down and release the foot bolt, No. 1056, are capped with solid bronze. The piano wire springs are sherardized.

The cupped staple is self-centering.

These Foot and Chain Bolts are made in three, six and ten-inch sizes in Japanned and Plated finishes. Ten-inch size is especially designed for garage and heavy door work.

If your jobber can't supply you, ask our Canadian Representative to quote you prices.

Hack Saws for Clean-Cut Work

YOU cannot expect a hack saw that is intended for work on cast-iron pipe to make a clean cut in sheet steel. For this reason the good workman who wants blades that are right for every job buys

Starrett Hack Saws

There is a Starrett blade of just the proper steel composition, number and set of teeth, shape, size and thickness for every kind and shape of metal. Starrett Hack Saws properly selected will do better work and last longer than any general-purpose hack saw. For most satisfactory results with hand frames order by this table:

No. 103 Saws in hand frames, to cut cast steel, cast iron, tool steel and all solid metals.

No. 103B Saws in hand frames, to cut cold-rolled stock and soft metals.

No. 102 Saws in hand frames, to cut sheet metal and tubing 16 to 18 gage.

No. 253 Saws in hand frames, to cut sheets and tubing thinner than 18 gage.

No. 112 Saws for heavy hand frame work and light power machines, on tool steels.

No. 115 Saw for cutting electrical conduit pipe, brass stock, light angle iron and channel iron.

No. 262 Saws for cutting angle iron, brass stock and general line of ornamental iron work.

No. 259 Saws for cutting iron pipe, light structural iron, channels, I-beams, auto frames, etc.

If flexible back saws are preferred, use Nos. 250, 252 and 258 instead of Nos. 103, 102 and 253 respectively. Many other styles for machine cutting. We sell direct to dealers. Write for free catalog No. 20-MA prices and discounts.

Plymouth Cordage Stands The Test

These men are testing a piece of 2½" dia. Plymouth Manila Rope. It has just withstood a 45,000-pound strain, though sold to hold but 43,000.

If this surplus strength were an isolated case, it would mean little. But Plymouth Cordage in general tests "higher than card." The instance cited here is typical.

This is an important fact, for it means that whenever you buy Plymouth you secure cordage that offers a comfortable margin of safety.

Because of this margin of safety —this surplus strength—Plymouth stands up under the most severe strains of service where other kinds fall down.

And since much the same factors which make a rope strong, make it durable as well, Plymouth's length of service is as superior as its strength.

Actual service is the real test and proof of Plymouth's superiority, and that is the test we ask you and your customers to put it to.

Do You Know A Boy Who Is Waiting for This Book?

HE may have the few tools and materials to be found in every household, or he may possess his own complete chest of tools and well-equipped workshop, but something is lacking—He needs ideas—suggestions of things to make or do. He is tired of all the things that he and his companions have been able to think of. Now there are hundreds of other boys scattered all over this big country who have many new and interesting ideas he has never thought of, but how can this one boy ever get in touch with all these others? In just one way—through the pages of

The Boy Mechanic

The Great Book of 700 Things For Boys To Do

These original, practical suggestions have been furnished by hundreds of boys who have actually built and experimented with the devices they are now telling other boys how to build. In no other way could a book containing such a wide and interesting variety of contents have been prepared, for no one author or staff of writers, for that matter, could have possibly gleaned such a wealth of ideas from their own observation and experience.

The Boy Mechanic **Represents the Best Accomplishments of the Mechanical Genius** for the material used in the book is a careful selection of only those articles which are new, practical and of more than ordinary interest; the selection having been made by mechanical experts who still have active recollections of their boyhood interests.

It gives complete directions for making all the things boys love to build and experiment with in the fields of electricity, mechanics, sports, arts and crafts work, magic, etc., such as Electrical Appliances—Steam and Gas Engines—Turbines—Motors—Wireless and Morse Telegraph—Self-Propelled Vehicles—Toboggans—Ice Boats—Canoes—Paddle Boats—Punts — Camping Outfits — Tents — Fishing Tackle — Magic Lanterns — Searchlights—Cameras—Telescopes—Gliders, Kites and Balloons—Electric Furnaces—Lathes—Pottery Kilns, etc.

A boy would be an old man before he could make half the things described in this wonderful book. It is entirely different from any other published and has

A Few Practical Features:

¶ A large number of the things described may be made from old cast-off articles which the average boy has at his disposal.

¶ Many articles involving the purchase of only a few cents' worth of material will be found fully as serviceable as similar ones costing several dollars.

¶ Scores of handy things the family can use in the home are described.

¶ Finally, this book will develop and interest the boy along mechanical lines and educate him at his play.

"Wish I knew what to make"

700 Articles-480 Pages-800 Illustrations

(7 x 10)

Price $1.50 Postpaid to any address

It is clearly printed on high-grade book paper and durably bound in cloth. The cover is of an attractive design in four colors showing a boy building a small boat. There are ten solid pages of index alone. Neither care nor expense have been spared to make this the greatest boys' book published, and to enable as many boys as possible to have one, the price has been made absolutely as low as possible. It would be difficult to think of a way of investing $1.50 that would benefit a boy as much as through the purchase of one of these books.

Sent postpaid to any address upon receipt of price.

The Clipping Machine your Customers Know and Like is this

Stewart Ball Bearing Machine

Stewart No. 1 Ball Bearing Enclosed Gear Clipping Machine in Operation

It sells to the user in Canada for only $9.25

The only satisfactory machine ever offered at the price.

The QUALITY machine, above all others. You can sell more of these machines than of all others put together. Stewart machines are not thrown back on your hands. They please the buyer and help sell more.

A clipping machine that won't cut, nor continue to cut, is a nuisance. It angers your customer, shakes his confidence in you, and spoils your trade.

That never happens with Stewart machines. That's why every jobber carries them; that's why they add to your prestige for selling **GOODS OF QUALITY.**

If you want the cream of the clipping machine business, sell the Stewart Ball Bearing Machine.

Each year we spend more to help dealers and jobbers sell Stewart machines than the gross sales of all other clipping machine makers amount to. That's real co-operation.

Stewart machines cut keenest and last longest. Each Stewart must satisfy the user, or all money paid out will be refunded.

All jobbers have Stewart machines. Order now, and write us for supply of "Helps to Sell" more of these splendid machines.

The Maytag Multi-Motor Washer

Announcement Extraordinary!

What the Maytag Multi-Motor Washer Will Do.

It operates the washer and wringer. It will operate the sewing machine, churn, cream separator, food chopper—or any group of small machines—that do not require more than ½ H.P.

Now Ready! Something entirely new! Looks good—"makes good"—sells on sight! Every woman wants one! No competition! Only Multi-Motor Washer on the market!

In short, Mr. Dealer, what has hitherto been considered impossible in washing machine manufacture has been achieved in the Maytag Multi-Motor Washer.

The secret is in the light, powerful, compact little motor that is mounted right on the washer—burns gasoline, kerosene, gas or alcohol. Guaranteed for THREE YEARS.

The Maytag Multi-Motor Washer is breaking all sales records for us, so it MUST be selling fast for our dealers.

The price fits the moderate purse, but puts a generous profit in your pocket. GET SOME OF THIS GOOD BUSINESS. Be the FIRST one to supply the demand in your town.

Now, listen! Some live, progressive dealer in your territory is going to make **BIG MONEY** handling the Maytag Multi-Motor Washer—and it might as well be **YOU.**

You positively **CAN** sell this washer and, if you don't, your competitor will—and pocket the profits. Remember, the proof of progressiveness is showing new things **FIRST.** This Washer is the same as our regular Power Washer we have sold for years, except that it has attached under the tub a ½ horse-power, 2-cycle air-cooled engine.

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

WISS SHEARS and SCISSORS Stay Sharp

An Odd Test Proves To Be A Great Selling Argument

THERE was a time—perhaps now not wholly passed—when the American people were in danger of forgetting that there would be such a day as to-morrow.

Our forefathers, with the habits and restrictions of the old countries strong upon them, builded carefully and well, with a true estimate of the value of stability and permanence. Whether they made a fence, a chair, or candlestick, their first thought was choice of materials and a method of construction which should withstand the ravages of time and use for generations to come. Much of the beauty of old furniture and utensils lies in their sturdiness—in the evidences of the thought and care given to permanent utility.

"Our forefathers builded carefully and well."

But there came a different day. The American people found themselves surrounded by enormous—apparently inexhaustible—treasures in the way of materials with which to work. Why bother to conserve them? They needed many things quickly. Why take the time to make them carefully? Let to-morrow take care of itself. The very air they breathed was surcharged with energy, and speed is its most direct and natural manifestation. Besides, a rapidly growing population gave rise to a strong demand for goods of every description. "Let's get a hustle on us," said the manufacturers, "and take our profit as quickly as we can get it."

"The very air was surcharged with speed."

Thus we fell into the habit, in this new country, of manufacturing for speed and volume instead of for quality and durability.

But the day of reckoning was inevitable. The law of the survival of the fittest is never suspended. The cheap, the flimsy, the shoddy and the make-believe may have their day—perhaps it may seem like a long day—but in the end they must fall out, go to the rear, and eventually disappear. It is interesting and instructive to go over a list of manufacturers who were in business a half century or more ago, and take note of those who have survived and prospered. Invariably it will be seen that the survivors are those who refused to follow false gods and made their goods the best they knew how. These ancient and honored names in our industrial history are those of men whose watchword was quality, men who would not place their name or brand on an unworthy, meretricious product.

The place which the name of Wiss holds on this roster is a constant source of pride and gratification to everybody connected with the business. The Wiss idea has always been to make a product which would not only do the things which it should reasonably be expected to do, but unreasonable things as well. This, it seems to us, is the highest form of service a manufacturer can render the public—to give them better goods than they expect! We are sometimes told that we go much farther than is at all necessary—that there is no good reason why we should spend time, labor and money in making a pair of shears that will do things they should never be asked to do.

"We are sometimes told that we go much further than is necessary."

We who sell the goods are not of that opinion—far from it. One incident of many will show why.

On the occasion of one of our salesmen's conventions a few of them amused themselves during an idle hour by cutting nails with Wiss Tinner Snips. They would put a nail between the blades, swing the snip high in the air, and bring it down with all their might on the most convenient heavy metal object—again and again until the nail was cut in two.

This innocent diversion nearly drove the superintendent out of his mind, but it was something more than fun for the salesmen. They found that a pair of Wiss Snips would cut a 20d nail and then cut clean a piece of tissue paper, showing that the marvelously keen cutting edge had not been damaged in the slightest.

"They found a pair of Wiss Snips would cut 20d nails."

What a selling argument, what an advertising argument, that was! To be sure, Wiss Snips were not *intended* to cut nails, but the fact that they *can* is the most convincing proof of the presence of every quality that a perfect snip should have.

This business has grown in repute, in magnitude and in prosperity for 67 years, because its products have *more* than made good. And the fact that they will do *more* than they should be asked to do makes them strong in public favor—enables us to offer them to you with confidence—enables you to sell them with ease and satisfaction.

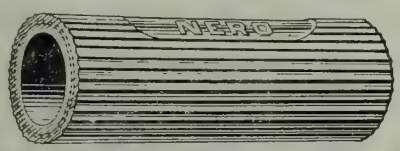
It will soon be hose-time!

Be prepared to give top-notch satisfaction and reap a good profit by stocking

GOODYEAR MADE IN CANADA GARDEN HOSE

It's a hose that has been made to stand dragging over rough surfaces without cutting or tearing. It is non-kinkable. It gives the customer the service that is expected from good hose.

A sale of Goodyear hose to a home will quite often result in one to the neighbor.



"Nero Brand"

"Nero" is an absolutely non-kinking hose. This feature is due to its special seamless construction. There are no joints or seams as the threads are woven right in the hose itself during manufacture by special machinery. Comes in single lengths up to 500 ft. This means that you have no short, unsaleable lengths left over at the end of the season.

"Reliable Brand"

"Reliable" garden hose is made by the same expert workmen as "Nero" hose. It is a lighter grade garden hose of "wrapped fabric" construction. The fabric is stitched together at the edges—not just stuck. Comes in 50 ft. lengths. Made ½-inch diameter, 3 and 4 plies; ¾-inch diameter, 3, 4 and 5 plies.

Goodyear Garden Hose has been extensively advertised to the consumer in the past by means of attractive copy in the newspapers. This campaign will be continued during the coming season.

Hardwaremen's Successful Convention

Sessions Extended Over Tuesday, Wednesday and Thursday—Well Attended and Interest in Matters Pertaining to Trade Was Keen — Association Shown to be in Flourishing Condition

THE first open meeting of the eleventh annual convention of the Ontario Retail Hardware and Stove Delears' Association was held at the King Edward Hotel, Toronto, on Wednesday of this week, at 10 o'clock, under chairmanship of the president of the association, C. W. Conn, Tillsonburg. The meeting gave promise of an enthusiastic convention by reason of the number present. President Conn, in a few appropriate remarks, declared the convention in session, and welcomed all members and visitors on behalf of the organization. He hoped the convention would result in much good. Short speeches were also made by President Adam Taylor, of the Canadian Hardware Manufacturers' Exhibitors' Association; by F. S. Tobin, secretary of the same association; Lieut.-Col. J. B. Maclean, publisher of "Hardware and Metal," A. M. Smith, president of the Canadian Stove Manufacturers' Association; James Hossack, vice-president of the Canadian Hardware Manufacturers' Exhibitors' Association; J. Billinghurst, vice-president of the C. H. M. E. A.; Weston Wrigley, honorary secretary of the Ontario Retail Hardware & Stove Dealers' Association. Reports were also made by President Conn, Secretary Macpherson, John Caslor, treasurer; report of the advisory committee and also of the auditors.

Reports from the various officers of the association, published elsewhere in this issue, show the organization to be in a most flourishing condition. Many out-of-city members registered, and the enthusiasm over the affairs of the association was manifest by the interest taken in the various subjects up for discussion of peculiar interest to the hardware trade. One of the items on the agenda of the convention, which resulted in a great deal of good and some valuable points being brought out, was the discussion over the tenders for the heating and plumbing of a modern house. The secretary's report showed eighty new members were received during the year, which speaks well for the membership contest. Together with the associate members added during the year and other members up to February 19, there is the excellent total of 169 new members added during the time since the last convention met.

The treasurer's report showed the receipts for the year to be $1,910.45, with the expenditures $1,157.62, leaving a cash balance unexpended of $743.05.

President Taylor of C.H.M.E.A.

President Adam Taylor, of the C.H.M.E.A., referred to the fact of the increased membership of the Ontario Association as good news. He expected that the hardwaremen would be greatly interested in their exhibit at London. His address follows:

"Mr. President and Gentlemen:—

"For the C. H. M. E. I wish to congratulate you upon this your eleventh anniversary of your birth year. We are naturally much interested in your health, wealth and prosperity, as we are of the same family, and share with you the good things of the earth, or the lean days of the cold depression of the poor times when they are upon us. In fact we are twin brothers to you, although our date of birth is later than yours as an association, nevertheless, the units that go to make up the interests of each Association, yours and ours, have existed and depended upon one another for a long, long time.

Group photo of Hardwaremen attending the Convention. John Caslor, Treasurer, is displaying some of the Association's cash.

"We are told of your increased membership; this is good news and I hope by the next meeting you will be able to double it.

"This year our Association will meet you, as it has been agreed with your executive officers, at an exhibition and general hardware week at London during June. At that time we expect to find a way to interest you to an extent that you will pronounce your visit to what we will prepare for you, a profit to yourselves of sufficient value to well repay you for the time you spare to make that trip, and the pleasure you will give us to meet you."

Exhibition Better Than Ever

F. S. Tobin, secretary of the C.H.M. E.A., reiterated the sentiments of President Taylor. Continuing, he said:

"We have given evidence as to keeping our promises with respect to exhibitions. In June we promise you something different than it has ever been before. It will be well worth your attendance. We have fixed upon a time in June when it looks as though there

ADAM TAYLOR,
President Canadian Hardware Manufacturers' Exhibitors' Association

would be a week to spare. It is a great pleasure to meet with old friends and see their faces again. It is a great pleasure to be with you again. We extend to you all a hearty invitation to be present in London in June of this year.

Need to Continue Work

Lieut.-Col. J. B. Maclean, publisher of "Hardware and Metal," spoke of the good work which is being done by the association throughout the hardware trade in general. He asked that the members of the association continue in this work for much greater good can result. He said:

"I want to congratulate you on the splendid progress which, I am told, the Association has made during the past year. It gives me, as one of its foster parents, a great deal of personal pleasure to know that it was never in as prosperous a position as it is to-day. A successful association is always an indication of the public-spiritedness of the members. Business men, manufacturers, farmers and mechanics are nearly always benefited by working together. For this reason I have always, since I became associated with the Hardware and Metal industry, more than a quarter of a century ago, supported organizations within the industry. At least two national retail associations were started before the present organization. They lived but a year or so. It is now nearly twelve years since several hardware merchants suggested our organizing an association in connection with—as an adjunct to—our paper, Hardware and Metal. I refused to do this because I found from actual experience and observation that close relationship between a newspaper and an association which the paper was aiming to serve led to abuses, but I agreed to help in the organization of the trade and finance the association until on a self-sustaining basis. A newspaper that cannot get subscriptions and advertising on its merits and has to appeal for support because it is an organ of an association or associated with this or that society has no right to exist. Neither is there a place for a retail association that appeals to the wholesale trade or manufacturers for contributions for excursions, banquets, theatre parties and other forms of entertainment. Happily Canada has been free, or almost free, from this form of graft, which, is unfortunately, not uncommon among the associations in various trades in the United States. Because, unlike former hardware organizations, you put your association on this high plane, and because of the excellent men who have filled your important offices, is the great reason for your present prosperity and the respect in which you are held throughout the trade.

"When your Secretary, Mr. McPherson, did me the honor to come all the way up to my office and personally invite me, not only to be present, but to speak at the annual meeting, I could not refuse and gladly accepted his cordial invitation, but when he asked me to speak on any subject I might select, I demurred, saying I would enjoy the meeting much more if I might be allowed to listen to the discussions.

"I will, however, take the opportunity of saying that not only are the merchants of Ontario, but those of all other provinces, to be congratulated on the development, accomplishments and the present prosperous condition of the Ontario Retail Hardware and Stove Dealers' Association.

"It has undoubtedly been very hard, discouraging work. There have, no doubt, been times when you were inclined to abandon the Association. You have imagined the apparent indifference, if not the opposition, of the great mass of the merchants.

"There is really no foundation for such a feeling. The whole trade of Canada is deeply indebted to those of you who have stood behind this Association all these years, and through which so much has been accomplished for the general benefit. I am sure that the hardware trade, from the Atlantic to the Pacific, appreciates your efforts and is deeply grateful. The fact is that most of us are animated by good intentions, but these are overcome by our tendency to put off the things we are not actually compelled to do.

"There is not a merchant, not a clerk, not a traveller anywhere in Canada—no matter how extensive his business may be—with a receptive mind and an energetic temperament who cannot find material at these gatherings to inspire him to be a bigger and better business man.

"If I were a merchant and could not attend myself, I would send my best clerk. If he is the right man he will repay me many times over for the time and expense. If I were in a distant town, I would get the merchants together, select one to attend the meeting, that he might bring back a report of what he heard and discuss with us the many sidelights of such an important gathering. Matters of a confidential nature that the editors of his trade paper may think it wise to omit from their printed report, the things such a delegate would learn in discussion with other business men or groups of other hardwaremen before and after the meeting.

"I am asserting what I myself practice. Last year, when the outlook was gloomy and every cent counted, I had five of my staff go, at considerable expense, to a very important business gathering in Chicago. They all came back bigger, broader business men as a result. One of these men has since been appointed our general manager, and another promoted to the management of one of our most important departments.

"For years I have gone regularly to New York, London, Paris, Berlin and other centres, where I have met and learned from leading financiers and business men something of present and future conditions. When, in 1912, leading financiers said Canada was in for two years of the greatest prosperity in her history, my papers were able to say, from information thus gathered in the money centres abroad, that instead we should at once prepare for the stringencies which came a few months later. In August and September, 1914, I was called anti-British because we said the war would not be over in three or six months, but would not, unless the unexpected happened, end for three or perhaps five or more years.

"As I said, the whole trade of Canada has been bettered by the work and inspiration of this Association. Much you have attempted is still uncompleted, and new conditions will arise and, I am sure I am voicing the sentiments of business men everywhere when I say they are with you. In details there may be some differences. But you can safely go ahead with the feeling, inspiration and confidence that you have them at your back. You will make no mistake in taking a big view and in discussing and acting upon trade problems as if you were representing all Canada. Through the business press merchants right across the Dominion are every week informed of any action you may take.

"Do not mind a little criticism of your work and your motives. The men who are doing things in this world will always be subject to petty attacks. In the U.S. civil war, when all the great Northern generals had to report continuous defeats, Lincoln

LIEUT.-COL. J. B. MACLEAN
Publisher Hardware and Metal

found one man—away out in the West, who always won—Grant. When he spoke of him for a higher command his advisers said it would never do. 'Grant is a whiskey drinker,' they said. Lincoln replied, 'I wish you would find what brand he uses; I would like to supply it to my other generals.'

"It is time enough to listen to critics when you find they are inspired by the same public spirit as you are.

"I cannot sit down without expressing the pleasure it gives me to see so many old friends who are still active in good works—some who attended the preliminary organization meetings at our office, more than a dozen years ago. One of you, John Caslor, was then elected and still continues to be Treasurer. And, if I mistake not, your President was one of the founders. I had a letter some months ago from the first President, Mr. Humphries, who is now a hardware traveller in the West."

Expect Big Exhibit of Stoves

A. M. Smith, of the McClary Manufacturing Company at London, president of the Canadian Stove Manufacturers' Association, said the members of his organization expected to have a large exhibit at London. He extended an invitation to the members to be present.

"I do not make any pretence as a

public speaker. You will expect something perhaps with respect to the Exhibitors' Association at London. We wish to extend a hearty invitation to you all. We hope to have the biggest exhibition of stoves on any previous occasion, and we will endeavor to make it pleasant for you all."

Need to Patronize Home Industry

James Hossack, vice-president of the Canadian Hardware Manufacturers' Exhibitors' Association, emphasized the need for patronizing home industries.

"There is one thought that occurs to me—the advantage and necessity of dealing in goods made in our own country. While manufacturers are prosperous you are prosperous. I hope you will take this matter up and discuss it at your convention. Arguments are always made against home-made goods. You have heard them. They may be such arguments that goods are not as rigidly inspected as in Europe. I will admit many of these things are true. But the European and American manufacturers have been organized for years. I believe the goods received during the past year, and which were made in Canada, were better than the goods received before the war. I believe they will be even better this year."

J. Billinghurst, vice-president of the C.H.M.E.A., said the exhibition in London, would be one of the best in the history of the association He wished the O.R.H. and S.D.A. every good success "I assure you the association has no more ardent friend than myself. I feel confident the exhibition of our association at London this year will be one of the best in the history of the association."

Believes in Measure of Protection

Weston Wrigley, honorary secretary of the association, thought the Canadian manufacturers should receive a certain amount of protection in the manufacture of Canadian goods. "There is no one more delighted than myself with the excellent progress the Ontario Retail Hardware and Stove Dealers' Association has made during the past year. The rejuvenation of the association during the past year has been one of the notable features of the association's work. The opportunity came a year ago to secure the services of Mr. Macpherson, of Prescott, as secretary. It is exceedingly gratifying to know of the practical work he has undertaken—work which would not be possible except by a practical hardware man. The association has stood on its own bottom. From the beginning it has been financially sound. I hope it will always stand solidly on its own basis.

Secretary Macpherson read a letter from A. A. Bittues, of the Gillette Safety Razor Company at Montreal, regretting that he would be unable to be present. His company was adding considerable new equipment and enlarging their plant to look after the export trade which prevented his leaving the city at the present time. He wished the association a most successful convention.

Increasing Membership Aim in Past Year

President Conn's Address—Membership Increased During Past Year — New Price-Book Favorably Received—Efforts of Secretary Appreciated—Booth at London Exhibition in June

IN his address delivered at the opening meeting on Wednesday, President C. W. Conn, of Tillsonburg, Ont., after thanking the members for having elected him as president last year, referred to the importance of studying the hardware markets with a view to buying to the best advantage. President Conn referred to the changed conditions under which the trade is working to-day, as a result of the war.

The increase in the association membership was also referred to, and the president pointed out that one of the chief aims of the assocation officers during the year had been to increase the membership.

A visit to the London Exhibition in June was suggested. It was also suggested that the association have a booth at the exhibition to be held in June, at London, Ont., under auspices of the Canadian Hardware Manufacturers' Exhibitors' Association. A number of other important matters were referred to in the president's address, which is reported in full as follows:

The President's Address

"Members of the Ontario Retail Hardware & Stove Dealers' Association:

"Gentlemen:—

"At our last convention held in these rooms you did me the honor of electing me as your president. I desire to take this opportunity of thanking you for electing me to the highest office in our association. I can assure you I feel it an honor not only to preside at our meetings but to be associated with such a large and intelligent body of retail hardware men."

C. W. CONN

Tillsonburg, Ont., President Ontario Retail Hardware and Stove Dealers' Association 1915-16

Study the Markets

"On account of the war in which our country has been engaged in for nearly two years, this past year has been for every business man a very trying one, the changed conditions being such that it has made every one of us study the markets more carefully in order that we may buy to the best advantage for our trade, and right here I may say that I think those who attend our conventions are the ones who will be the most benefited by taking part in the discussions also by comparing notes with other retailers as to prices and to the best markets to buy the different commodities in."

Closed Meetings

"At our last Convention our meetings were held in close session for retailers only. This year it has been decided to do the same and every member is free to discuss in full, any matter that is brought up for discussion.

I am pleased to announce to you, that the Canadian Manufacturers' Exhibitors' Limited have remitted to our

treasurer the sum of three hundred dollars which they promised us at our last convention."

Membership Increased

"The increasing of our membership has been our great aim this year and I am pleased to state our efforts have been rewarded as we have more members in good standing before our Convention this year that at any previous year, having added one hundred and fifty new members, ninety seven hardware men and fifty three associate members, this being entirely new blood.

We decided to get out "A service to members campaign", by sending out price lists etc. to the trade, which judging from the replies received by our secretary from all parts of the country have been very much appreciated by the trade and I may state this is only the beginning, we intend to keep on getting out new lists as fast as possible."

The Secretary's Efforts

"Too much credit cannot be given to Secretary McPherson for his efforts in this "service to members' campaign" as upon him has fallen the whole work of getting out these lists. That the efforts have been successful is shown by our large increased membership. I would suggest that a full discussion of "The service to members' campaign" as carried on this past year be held and that suggestions as to improving or adding too be forthcoming at this convention."

Tenders for Hardware

"You have had submitted to you, a plan and specification of a modern house on which we are asking tenders for hardware, heating, plumbing and galvanized iron works. I sincerely trust that we will receive many tenders, as this seems to me to be one of the best educational features of our convention, and full opportunity will be given all members to discuss the different tenders when opened.

The Canadian Hardware Manufacturers' Exhibitors' Limited, have decided to hold an exhibition of "Made in Canada Hardware" at London this coming June, having secured the Western Fair buildings for same and I would like all members of our association to make it a point to attend this exhibition and assist in making it a huge success."

Booth at London

"I would also suggest that an executive meeting of this association be held in London at the time of this exhibition also that we engage space from the Canadian Manufacturers' Exhibitors' Limited and erect a booth for advertising our association, having on display our different price lists, etc., by this means coming in touch with many of our fellow-hardware men, not members of our association whereby we may greatly increase our membership."

"In closing let me again thank you for the honor you conferred upon me. and I sincerely trust at the close of this, our Eleventh Annual Convention, we will go back to our homes feeling greatly benefited from this convention and that we can truthfully say it has been the best ever held, also that we may all be spared to attend many more conventions."

Secretary Reports 169 Members Added

Treasurer's Statement Showed Association in Healthy Financial Condition with Cash Balance of $743.05.

To Members of the O.R.H. & S.D.A.

Gentlemen:

In presenting this my first report as secretary of your association, I must express my gratification at the manner in which my efforts during this term of office have met with your approval, as shown in the many kind expressions as to the services rendered, which expressions I have every reason to believe are sincere.

W. F. MACPHERSON
Prescott, Ont., Secretary Ontario Retail Hardware and Stove Dealers' Association.

I will mention first the results as made apparent in the number of new members enrolled. During the period from March 15th to 31st December, the end of our financial year, 94 full memberships were recorded, of which 14 were renewal and 80 new. In addition, associate members were added, all new. This makes a total given in the nine months of 134 new members. Since January 1st to February 19th there have been added 19 full members and 16 associate, making a grand total of 169 new members secured since last convention. I am also pleased to state that, although the expense in connection with the rendering of "Aid to members," as per your resolution at the last convention, has been considerable, our treasurer will be able to make you a very favorable report as to the financial standing of the association, and sufficient to assure you of the possibility of an extended service during the coming year along such lines as this convention may determine.

During the year there has been distributed through my office from 9,000 to 10,000 mailings, and I am satisfied that during the present year the publicity thus afforded will bear fruit, and that a still larger increase in membership can be obtained by following up the campaign inaugurated.

During the past few months I have received numerous remittances covering old accounts due our members, which were forwarded in response to collection letters. Many of our members have written me stating that some of the accounts collected were actually outlawed. I mention this because it is evident to me that many of our members have not started to use these valuable collection forms, and, as each member has been furnished with a supply, I would strongly recommend their use, as I believe almost any member can collect sufficient to cover his membership fee many times over from, apparently, uncollectable accounts. Any remittance or correspondence regarding accounts forwarded to me are promptly sent to the person sending out the collection letter.

Although every package of lists and supplies sent out contains a form of acknowledgment to be returned, I might state that less than 50 per cent. of these packages were acknowledged. I would appreciate receiving a letter from all the members using these forms as to their value, not for my own satisfaction, but to use in connection with the campaign for new members. Your assistance in this way will ensure a continuance and extension of the service, as only by a steady growth in our membership can the expense in connection therewith be covered.

I must express to you my appreciation of the good services of our two hardware publications, "Hardware and

Metal'' and ''Canadian Hardware Journal,'' in their endeavor to promote the interests of our association, and I am sure that their valuable aid was a considerable factor in our growth this year, and I feel is worthy of more than this passing mention in my report.

I must now pay my respects to our good president, Mr. Conn, who has been most attentive to the affairs of the association and energetic in the duties of his position during his term of office.

As further reports will cover the other activities of your association, I will conclude by expressing the hope that this our 1916 Convention may be one of harmony, full of good fellowship, and that our deliberations and discussions will be of such a nature that each and every member will go back to his business feeling that he has profited by his attendance.

All of which is respectfully submitted.

W. F. MACPHERSON, Secretary.

Financial Statement

The following is the statement of the finances of the Ontario Retail Hardware and Stove Dealers' Association, as presented by the treasurer for the year, January 1, 1915, to December 31, 1915:

Total cash received	$1,900.67
Total cash expended	1,157.62
Cash balance	$ 743.05

Standing of Association

Cash on hand	$752.83
Stock on hand	110.00
Office equipment	40.00
	$902.83

Advisory Committee Thinks Coming Year Will Be Good One

Anticipates an Even Larger Percentage Increase of Membership Than Year That Has Just Closed

February 23rd, 1916.

Gentlemen:

Your Executive Committee held a meeting in Toronto on April 5th when the books and property of your Association were transferred by former Secretary Wrigley to Secretary MacPherson, of Prescott, his successor. Your auditors at that time made an audit of the books and made a satisfactory report. Your Executive at that meeting went into the proposed ''Service to Members'' plan and authorized the Secretary to follow up the plan as per his suggestion. Your Executive also authorized plans for a membership contest, results of which will be announced by the Secretary in his report.

A meeting of Advisory Committee was held in Toronto on 11th October and, on the report of Secretary as to the results obtained through the Price Lists issued so far, authorized publication as early as possible of further additions.

The purchase of a duplicating machine was also decided on for the purpose of issuing frequent price changes to our members. Recently, a machine has been secured, and we are sure that the usefulness of the same will be demonstrated to your satisfaction. At a joint meeting of the Advisory Committee and the Committee of Directors of C.H.M.E.A., it was decided to hold our Convention as a purely business Convention again this year, and to accept an invitation from the C.H.M.E.A. to attend a monster Exhibition to be held in London in June this year. The date will be shortly announced and we would express a hearty desire to have a good, large representation of our members present on that occasion.

At a further meeting of Advisory Committee on January 17th last, plans for the present convention were approved of and we sincerely trust that you will be able to secure some lasting good from the deliberations and discussions on the matters set forth in the program.

We are pleased to note a splendid increase in our membership and have no hesitation in believing that the present year will see a much larger percentage of increase than even the past year shows.

We invite your hearty co-operation during the present Convention to ensure the success which is due an organization founded for the betterment and aid of the Retail Hardware and Stove Trade in our Province.

All of which is respectfully submitted. C. W. Conn, president; H. Occomore, past president; W. F. Macpherson, secretary

To Enlarge Service to Members

Members Suggest Additions to Association Price Book—Members Disagree on Question of Universal Retail Prices—Association Helps Favorably Received

At the opening meeting on Wednesday afternoon the minutes of the last meeting were read and adopted.

The resolution committee was appointed as follows: James McGregor, Oakville (chairman); D. A. McNab, Orillia; R. Hawkins, Smith's Falls; J. Rogers, Atwood; A. R. Bernhardt, Preston.

Nominating committee was appointed as follows:—W. A. Rankin, Ottawa (chairman); S. B. McClung, Trenton; F. W. Hendershott, Mt. Forest; J. D. Smith, Baysville.

Service to Members

President Conn in opening the discussion told of the service to members which had been enlarged during the past year. The Association price book had been favorably received by members of the Association. The officers of the Association would like to receive suggestions as to how the service could be enlarged.

D. A. MacNab, Orillia, and T. J. Thomson, Owen Sound, suggested that new lists be issued on gas fittings and cast fittings. A .J. Wright, Hamilton, Ont., suggested that a list be issued on sheet window glass.

New Lists Suggested

D. A. MacNab, Orillia, suggested that a list be issued showing the sizes usually carried in the average retail hardware store, and that blank spaces be provided for the insertion of cost and selling prices. One member pointed out that the glass manufacturers are now working on a new sheet glass list which would be issued shortly.

Mr. MacNab pointed out that many junior clerks could not figure discounts, and he urged the adoption of a list which the members themselves could fill in with prices.

Mr. Hawkins, of Smith Fall's, stated that he had made up price lists of his own for glass, but he would be glad to have lists issued by the Association.

It was pointed out by a member that matters were unsettled with regard to glass lists owing to the fact that Canada is at present depending largely on the American market for supplies, and the American list is now entering largely into the glass business.

A. J. Wright, Hamilton, suggested that a uniform price for glass be adopted and that members be asked to adhere to the suggested prices.

Mr. MacNab did not agree with Mr. Wright, and stated that a resale price list would not be lived up to, owing to differences in conditions and competition in various towns and cities. Mr. MacNab advised the Association to keep away from any attempt to tell members what they should sell their goods at. Each individual member would have to set his own price. A universal retail price list would not work.

President Conn stated that Mr. MacNab's point was well taken, but pointed out that if a suggested retail price list was issued by the Association, the members of the Association would have to use their own discretion as to its application.

Mr. McGregor, of Oakville, told how a Hamilton firm had gone into Oakville and sold glass at a very low price.

W. W. Bennett, of Gananoque, suggested a glass list with sizes shown, but with blank spaces for the insertion of prices.

Secretary MacPherson stated that it was not the intention of the Association to publish suggested retail prices, but merely to publish a glass list with sizes shown and blank spaces provided for cost and selling prices.

List for Butts and Hinges

A. J. Wright, Hamilton, Ont., suggested a list for butts and hinges.

President Conn suggested a list for dry colors, owing to the fact that it is hard to mark the prices on the original containers of dry paint colors.

Another list suggested was for brass goods, such as bibbs, cocks, etc., or in other words a plumbers' list.

D. A. MacNab asked how many members present were using the Association price list. Those using the lists were asked to rise, and it was found that a large percentage of the

members are using the lists. One member stated that he had only received one set of sheets with the price book cover.

Secretary Macpherson stated that each member should receive sheets in duplicate. One set to be used in the price book for office use and the extra sheet for use in the various departments of the store.

If any of the members have not received two sets of lists with the binder, they are asked to advise the Secretary.

As no further suggestions were forthcoming, it was suggested that the next subject, "Price Maintenance," be taken up.

D. A. MacNab, Orillia, objected to the new subject being taken up until something definite had been done regarding the service to members. "Let us come to some decision," said Mr. MacNab, "and not jump to the second subject on the program until we settle the first one."

It was then moved by Mr. Mosely, Huntsville, and seconded by Mr. Bottum, Bobcaygeon, that the matter be left in the hands of the executive committee. The motion carried.

Take Up Misrepresentation of Paints

Claimed by Members of Association That Pure Paint Cannot be Produced for Thirty-Three Cents a Quart—Discussion on Firearms Legislation

A discussion arose at the Wednesday afternoon meeting, when one of the large department store's advertisements was read quoting paint at 33 cents a quart. President Conn said the point the association wanted to get at was whether the advertising is misleading.

Mr. Phillips, of Toronto, said he took a man from the inland revenue office to the department store and asked if the paint was pure. He bought two cans and sent one to the inland revenue office at Ottawa for analysis. He was awaiting a report.

W. A. Rankin of Ottawa said he knew where the paint was made. A traveler had offered him the same paint and showed where he could make a profit at 35 cents a quart.

John Caslor, Toronto, Ont., thought if the firm could be shown up it would be one of the best things for the retailer.

President Conn said: "Are we going to allow this misrepresentation if it is proved that it is misleading?"

J. N. McGregor of Oakville said if the association can show up this concern it will be one of the best things for the trade. John Caslor thought it was the duty of the Ad. Club to take the matter up.

It was moved by Mr. Wright, of Hamilton, and seconded by Mr. MacNab that the matter be referred to the executive committee for action when the report of the analysis was received from the inland revenue department.

Discussion Re Firearms Legislation

A discussion took place on the law governing the sale of firearms and offensive weapons in Canada. President Conn read the provisions of the Act from last week's issue of Hardware and Metal.

Secretary Macpherson read a letter from a firearms manufacturer who stated that the present law was unjust and prevented many responsible persons from securing revolvers.

The chief discussion centred around the sale of air guns. W. J. Carter, of Picton, could not see why the sale of air guns should be prohibited.

Roy McGregor, Oakville, Ont., pointed out that there are some very powerful air guns manufactured—some that had sufficient force to deliver a bullet that would penetrate six inches of wood. Mr. McGregor thought that a man with a powerful air gun could do considerable damage without being detected, owing to the fact that there would be little or no report.

Another member told how he had been shot on two separate occasions by some person with an air gun. He had nearly lost the sight of one eye as a result. Owing to the fact that no report of the discharge was heard, the shooter was not detected. This member was heartily in favor of any law that would prohibit the sale of air guns.

John Caslor, Toronto, told of an experience he had with an air gun, which might have proven serious, and he was not in favor of selling air guns.

Mr. Thomson of Owen Sound thought the Act in its present form was unfair. He also stated that his firm had been prosecuted and fined for selling a hunters' knife, but merchants are allowed to sell French cook's knives, and the law does not affect their sale.

Secretary Macpherson reported he had been told that the Provincial police department would oppose any change in the law as it stands.

A. J. Wright, Hamilton, Ont., told of the red tape necessary if a man wanted to purchase a revolver, and stated that he had stopped handling them as a result.

Quite a number of those present at the meeting did not seem inclined to express an opinion on the subject and it was decided that no action be taken.

Rebate on Stoves.

President Conn brought up the matter of a bonus or rebate on stoves, offered by the Canadian Stove Manufacturers' Association, which, it is claimed, gives the real stove dealer the advantage of the price that he is entitled to, instead of making a price to him, the same as any general store buys one stove for.

The main feature, it was pointed out, that should appeal to the dealer is that the bonus or rebate is made up to apply on the aggregate purchases from several manufacturers. This enables the dealer to select the lines best suited to his market and taste, or as many different lines, or parts of lines of the associated manufacturers, and in this way obtain the maximum rebate his purchasing power entitles him to. The notice issued by the Stove Manufacturers' Association reads as follows:

"Your combined purchases for the year from Jan. 1 to Dec. 31, 1916, from the following manufacturers (names deleted) will be added together to make up the amount that will determine the amount of your rebate. All your purchases of coal or wood stoves, ranges and heaters are included in making up the amount when ordered from (names deleted). Furnaces, gas heaters, gas stoves or ranges and electric heaters, electric stoves or ranges are not included. Your combined purchases of $250 or over entitle you to a rebate of 2½ per cent. and up, according to amount you buy from all or any of the above manufacturers."

A COMPLETE REPORT

A complete report of the proceedings of the Eleventh Annual Convention of the Ontario Retail Hardware and Stove Dealers' Association appears in this issue. Although the convention was not concluded until Thursday night, a full report of the discussions, question box sessions, election of officers, together with the annual reports, appear in this issue. To issue a complete report in such a short period of time requires the energy of several trained men. The effort was undertaken in order to give readers what Hardware and Metal has always striven to give — the best possible service.

ADDRESS ON INSURANCE

Mr. Wright of Wright & Ross, insurance adjusters, gave an address on Wednesday afternoon with respect to insurance policies. His address was preceded by a short talk from W. J. Carter, telling of his recent experience in having his fire losses adjusted. "Fire on our premises was very interesting to us. But it may not be so to you," said Mr. Carter. "We were meandering along in a very lax way with respect to insurance policies."

Had Co-Insurance Clause Cut Out

"We had $24,000 stock and carried $15,000 insurance. One part carried insurance of $1,000. The adjuster walked in and said he would call it $1,000. In the main part of the building water had done great damage. There was no hesitancy about allowing all the insurance this part carried.

"By all means put police at your doors when fire comes. The mob would have overrun and stolen a lot. It is beneficial also in stopping pilfering. One farmer had an axe, hatchet, dozen knives and forks. He was fined $30. The adjuster told us we were more than fortunate in having the co-insurance clause wiped out."

Mr. Carter said his office had been destroyed and price books were destroyed. The stock sheet prepared in August last year were preserved in the safe, but at the time of stock-taking the prices had not been entered. The sheets had to be filled in for the insurance adjusters, and Mr. Carter had secured his prices by taking them from "Hardware and Metal." "One of your valuable assets then is 'Hardware and Metal'," said President Conn. "Yes," said Mr. Carter, "it is our hardware bible."

Opposed to Co-Insurance Clause

"One gentleman says the co-insurance clause is the best thing. I am at absolute variance with him," said Mr. Wright.

"Mr. Carter possibly did not consider that stock is the same value on day of fire as when bought. You cannot tell two months after your inventory what your stock is.

"I represented a company in which the chartered accountant had put on a value of $23,280. That loss was finally settled for $47,808. The loss in that case was $135,000 altogether. I have seen many stung by co-insurance. The co-insurance clause is the best asset the fire insurance companies have. Enhancements are one of the things you have never thought of. When you have a loss do not leave it to your local agent to give notice of loss. There is no such thing in Canada as a broker who has no connection with the insurance company. The law requires that you give notice of loss to the company in writing. The next step is the notice of separation. You must get notice by yourself to the company. Notice from the agent is not notice from you.

"We are going to save the goods of our client in the best possible way. The law says you must protect it. You should not take the position that if the insurance companies want it you should let them have it. They do not want it. You are wrong in neglecting it. They do not have anything to do with goods except those on which there is a loss.

Should Notify of Loss

"Companies send their man down, presumably representing all the companies. We often have cases where companies say the adjuster represented them on one policy but not on another. These things you should do:

1. Notify the company of loss.
2. Save everything you can.

Allowance for Obsoletion

"A lot of you do not get your stock-taking up-to-date. It is a big thing. Depreciation of equipment is another big thing. Put them on your books at the actual cost to you. If a five-year life, set off 20 per cent. as contingent fund. Don't write off depreciation at all, but throw it into a contingent reserve fund. There is obsoletion. The adjuster makes his statement on value less actual wear and tear. This remark applies to machinery. Machines worth $6,000 a year were obsolete because of new inventions. They had been carrying $10,000 insurance and were not worth a snap because of their obsoletion.

"It has been argued that unless you are carrying co-insurance you cannot get a policy which will cover all goods. A policy should be broad, general—goods, wares and merchandise—and such as usual to a general hardware business. You should not get a whole lot of permits.

Must Get Permits

"One permit you must get is for coal oil. There is a law that prohibits a man carrying more than five gallons of coal oil without a permit. This is an Ontario statute. You cannot carry more than five gallons of lubricating oil without a permit.

"But do not get permits unless they conflict with statutory provisions. Do not get anything on your policy that you do not need to have. Insurance is a tremendous problem. I am continually running against something new. If a building is destroyed to such an extent that it cannot be repaired, it is a total loss in Ontario, but not in Manitoba, Alberta and British Columbia.

When to Move Stock

"When shall he move his stock when a fire is threatening?" was asked by Secretary Mac

pherson. "That is a question on which you must use your own judgment," replied Mr. Wright. "If goods were mine, every dollar would get out of there as soon as possible. Then the insurance companies would pay for damage to goods by removal or through being stolen."

D. A. MacNab said a number of years ago the association took up the matter of mutual insurance. He opposed it then on the ground that they were not insurance men. "I think our policies should be placed in hands of someone who knows more about it than we do."

A resolution thanking Mr. Wright for his address was moved by A. J. Wright, of Hamilton, and seconded by R. W. Hawkins, of Smith's Falls.

Co-operation to Maintain Prices

Discussion Brought Out Advisability of Members of Trade Getting Together to Avoid Cutting Prices

The question of maintaining prices brought out some interesting experiences of members in their particular town. In opening the discussion Secretary Macpherson said he was in a pretty good town for keeping up prices. There was a time when they did cut prices. But that was before he attended the conventions. They got together on cement first, and that was the thin edge of the wedge.

"One of the main things is friendly relations with your competitors. We buy our dry cells together, our glass, our kalsomine and other things. I think this can be done in many more cases."

Mr. Bernhardt, of Bernhardt & Spalding, Preston, Ont., said they had come together there on certain things and had been selling glass from list for past three years.

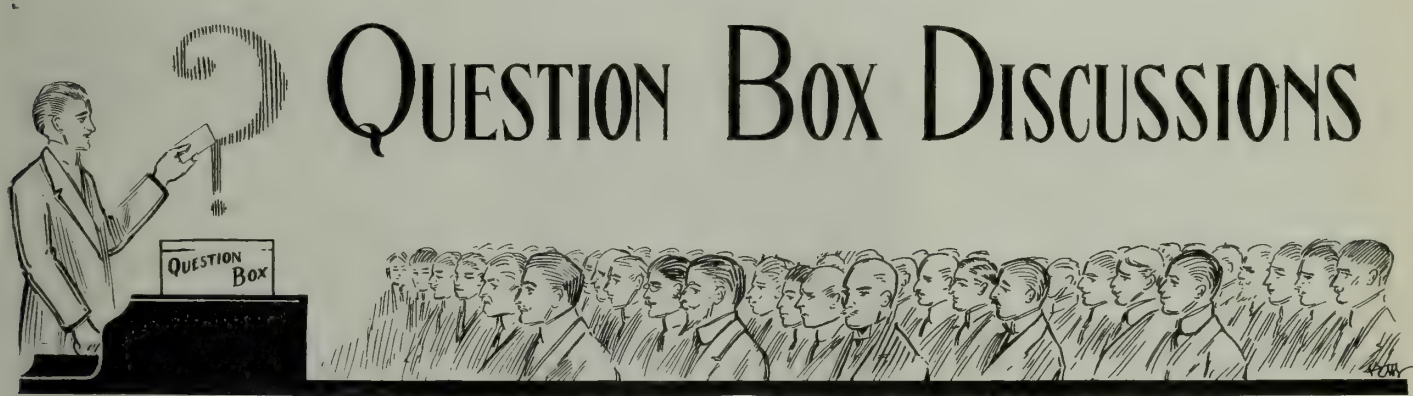
Ed. Wanless, of J. C. Wanless & Co., Chatham, said it seemed almost impossible to get together in his city. Two out of seven had promised to attend a meeting. Four others would not promise at all. "If anyone can line up seven hardware men there I would be glad to present him with a gold medal."

Mr. Billings, of the Windsor Hardware Co., Windsor, Ont., said they have more to contend with on the border owing to the nearness of American cities. The hardwaremen of Windsor get along very well. About the only thing they have done is to get acquainted. "So far as prices go we use our own judgment. Some of us get together and buy glass. So far as co-operation, we are getting along very well. We have gained nothing more than friendship. That is worth a whole lot."

F. W. Hendershot, Mount Forest, said it had been the custom of merchants in his town to meet and discuss the wholesale situation. "It has been customary for my competitors to telephone and arrange prices. It has been a very pelasant place to work on this account.

Dan. Cinnamon, Lindsay, Ont., stated as follows: "We try to maintain our own price as much as possible and meet the other fellow's price when we have to. We find it hard to get together. I run my business the same as if the other fellow was not there. If they cut prices we meet them and grin and bear it. It is a nice thing to maintain prices when you have congenial competitors. If you have not it is best to run your own business to suit yourself."

The discussion was here intercepted to allow Mr. Wright of Wright & Ross, to give an address on insurance adjustment.



QUESTION BOX DISCUSSIONS

Some interesting discussions developed at the first question box session at the Wednesday evening meeting. One of the questions asked was, Why do hot water pipes freeze quicker than cold water pipes? One of the members wanted to know if it was a fact, to which President Conn replied "Yes." Another member wanted to know if the water was hot when the pipes froze. As no one seemed able to volunteer the information Secretary Macpherson moved that the matter be referred to "Hardware and Metal" for a reply. The question will be taken up and answered through these columns next week.

Prevailing Prices of Galvanized Iron

What is the prevailing price of galvanized iron, sheet and half sheet? President Conn asked all those getting 10 cents a pound or over to stand up. Five members responded. Secretary Macpherson suggested that their photos be taken and preserved. He was unable to get any such price. President Conn, in the absence of further information, said the prevailing price was 9 cents a pound in his town for sheets and 10 cents per pound for cut sheets.

Where is Profit on Nails?

Another questioner wanted to know if any dealer was getting a profit on the present price of wire nails. Secretary Macpherson said in Prescott they have been selling them without a profit. He was at a loss to know why it should be so, and was of the opinion that the dealers who are making a profit are very scarce. A. J. Wright, of Hamilton, said the dealers in that city were making a fair profit when the nails were sold by the pound. In that city they were selling them at 6 pounds for 25 cents and 5 cents for a single pound. The reason that they could not get a profit on nails in kegs was because the jobber stepped in. Dealers in Hamilton had come together and arranged the price of such articles as wire netting and screen wire cloth, and he saw no reason why dealers in towns and districts should not try to get together on articles where they found there was no profit.

Collection Department Successful

Is collection department of Association successful? Members reported considerable success in collecting accounts through the department conducted by the Association. Mr. Hendershot, of Mount Forest, had succeeded in getting two accounts out of three that had long been considered doubtful. He thought where the merchants selected his cases judiciously for collection by this means it was an excellent scheme. Mr. Oldham, of Weston, reported that he had used the Association's collection forms with success. A. H. Wideman, of Markham, said he had very good success in collecting by this means.

Some Expensive Leaks

One of the questioners wanted to know what was the most expensive "leak" in the hardware business. A. J. Wright, of Hamilton, said he had lost a barrel of linseed oil from a storage house which contained twenty-five barrels. The staves of the barrels seemed to spring and allow the oil to escape. It had been suggested that he put in a tub of water to keep the staves from shrinking. John Caslor, Toronto, thought the installation of a storage tank was a solution of the difficulty. Mr. Rankin, of Ottawa, said he thought if the floor of the storage house was sprinkled with water occasionally there would be no shrinkage in the barrel staves.

H. Occomore, of Guelph, thought another serious "leak" was through the spoiling of glass in cutting by inexperienced men or juniors in the employ of the concern. They would naturally hide glass spoiled in the cutting and not let the proprietor know of the leak.

Opinion as to Special Sales

The question of whether special sales paid was asked. W. J. Carter, Picton, Ont., said he had put on a special sale after his recent fire and had found it paid well. President Conn said the results of the dollar day sales in Tilsonburg were conceded by the merchants to be the largest of any day in the history of the town. H. Occomore, of Guelph, the said the dollar day sales had enabled him to get rid of a lot of stuff which it would have been impossible to sell otherwise. J. E. Moseley of Huntsville, had tried the scheme, but had given it up after a short experience.

Re-sale Prices.

Will it benefit members of our Association if a general re-sale price is adopted?

One member in answer to the above expressed the opinion that there would be no benefit until all retailers were memebers of the Association.

A. M. Smith, of the McClary Mfg. Co., was asked by President Conn to speak from the manufacturers' standpoint. Mr. Smith replied that the question was rather a vague one. "Our line," said Mr. Smith, "is so extensive that it would be almost impossible to have re-sale prices on all articles. We are starting this year to place re-sale prices on a few lines."

F. M. Tobin, secretary C. H. M. E. A., stated that he had listened to a good many discussions on re-sale prices, and related some of his experiences when he was a travelling salesman some years ago. "Price does not govern the sale always," said Mr. Tobin. "I would advise retailers to encourage manufacturers to adopt legitimate re-sale prices on goods of reputable quality and when conditions were satisfactory to all concerned."

Mr. Hawkins, of Smith's Falls, was in favor of re-sale prices on a fair basis, on goods well known and well advertised. Mr. Hawkins also suggested that manufacturers, when selling to department stores and mail order houses should try and get these firms to accept the goods under a label which would be different to the labels supplied to the retail trade. Mr. Hawkins did not ask the manufacturers to stop selling to the large firms, but he thought steps should be taken to protect the retail hardware merchant.

Edwin Johnson, of Boissevain, Man., was in favor of national advertisers having legitimate re-sale prices.

Mr. Hawkins stated that he was selling a line of skates, on which re-sale prices had been fixed, and had no trouble in securing the re-sale price adopted by the manufacturer. Secretary Macpherson stated that he had seen same line of skates being sold at a cut

price. A number of other retailers stated that they had been able to secure the re-sale price on skates.

F. M. Tobin told how some of the large department stores and mail order houses cut prices below their cost, in order to use them as leaders. This, said Mr. Tobin, is a common practice in many of the large stores.

Cost of Doing Business

What is the percentage cost of doing business on various lines using sales as a basis?

Mr. Reddick, of Napanee, referred to lines such as nails, twine, etc., on which very little profit was made. These lines were sold at a loss. It is hard, said Mr. Reddick, to get the proper percentage on each individual line. What per cent. should we make on our sales? Mr. Reddick also stated that the merchant had to take into consideration the many leaks in a hardware store, as they all had to be paid for.

A. J. Wright, Hamilton, was of the opinion that it would be impossible to fix stated profit percentages on the hardware lines referred to. Profits in a hardware store range from 1 to 100 per cent.

Value of Stock

What is customary in taking an inventory—to take in goods at present cost or cost at time of purchase?

The consensus of opinion was that the goods should be taken in at the actual value or cost at the time the inventory is taken.

Mr. MacGregor, Caledonia, was of the opinion that the goods should be taken into the inventory at the actual cost or value at the inventory period.

Collections

Who has best plan for keeping collections up?

This question was not answered.

Eaton Competition

How does the Eaton competition affect your store trade? Why can Eaton sell scales at the price they cost us? What do you pay for a 240-lb. scale—10-lib. scale—4-lb. scale?

No replies were forthcoming to the above questions.

Association Forms

How many members are using the Association forms?

The above question had been answered at the afternoon session, and it was not thought necessary to again take it up. (Answer will be found in article referring to Association's service to members elsewhere in this issue.)

Convention Dates

Is the third week in February the best time in which to hold the convention? The majority of those present were of the opinion that the third week in February was the best period in which to hold the convention.

Cement Sacks

How can a member secure full value for cement sacks returned to manufacturers?

One member complained that the cement manufacturers always deducted a certain percentage, usually ranging from 7½ to 25 per cent., on cement sacks returned, which meant loss to the retailer.

Another member stated that on one shipment he had made in which he knew for a certainty that all the sacks returned were in good shape, the manufacturer deducted 7½ per cent. for damaged sacks. On another occasion he made a shipment containing a large percentage of torn and damaged sacks, and the deduction was just the same as in the previous shipment—7½ per cent.

It was felt generally that the retailer could secure very little redress, and that he would have to make a profit on cement sufficient to cover loss on sacks in addition to the regular profit.

How Net Profits Are Figured

How do you figure net profit? was answered by Mr. MacGregor, of Oakville. The net profits for the year could be secured by finding the difference between the cost price and the selling price. This would give the net profit. Mr. Reddick, of Napanee, thought the man who keeps the books should be able to answer the question of net profit. It was very necessary that expenses be considered with a view to finding possible leaks. The difference between assets and liabilities at the end of the year will be the present worth of the merchant. Edwin Johnson, of Boissevain, Man., said the difference between the debit side and credit side of the merchandise accounts should give the gross profits for the year. The difference between the assets and liabilities is the net profit for the year. In some years he found the overhead expenses had run as high as 22 per cent. On the average it had been 19 per cent. of the gross profits.

Using the Inventory.

What use do members make of the inventory? This question, although a very important one, did not bring forth a great deal of discussion. Mr. Reddick, of the Madole Hardware Company, Napanee, who had placed the question in the box, stated that he had been inspired to do so by an article on "the inventory" which had recently appeared in Hardware and Metal.

PRESENTATION TO MESSRS. WRIGHT AND HAWKINS

A. J. Wright, of Hamilton, and R. Hawkins, of Smith's Falls, were declared the winners as the leaders in the membership contest. President Conn, on behalf of the Association, presented them with handsome umbrellas.

Messrs. Wright and Hawkins made suitable replies.

TENDERS ON DWELLING KEENLY DISCUSSED

Hardwaremen Go Through Various Tenders and Argue Pro and Con for Figures Submitted.

One of the most interesting discussions to the members of the Association took place on the tenders for the plans and specifications for hardware, plumbing and heating of a new dwelling. The discussion took place Thursday. Tenders for the work were received by Secretary Macpherson and read by President Conn. The discussion arising out of the subject will appear in next week's issue, together with the plans and specifications and tenders submitted.

J. N. McGREGOR
Oakville, Ont., elected 1st Vice-President Ontario Retail Hardware and Stove Dealers' Association.

RESOLUTIONS COMMITTEE REPORT

The Resolutions Committee's report was submitted on Thursday afternoon, as follows:

The committee would recommend that the O.R.H. and S.D.A. would co-operate with the Sanitary and Heating Engineers' Association in endeavoring to secure a uniform plumbing by-law. We feel this would protect those in the legitimate trade, and also be a protection to the public.

The committee would recommend that the Secretary be instructed to get out lists on malleable and cast pipe fittings, butts and hinges, machine bolts, wood screws, and glass, and would suggest getting them out in the order named, except any lists which are almost completed.

We would recommend that every member of our Association make use of the collection forms and report any gratifying result to our Secretary. This can be used to good effect by him in his inducement to new members.

We would recommend our members to take advantage of the offer of Ross & Wright as to the examination of insurance policies and the adjustment of any losses.

In the matter of the advertising brought to our attention in reference to the quality of paints being sold, if the investigation proves that the article did not prove as advertised, the matter be referred to the Ad. Club and the fullest publicity given.

As it is stated by the Canadian Hardware Manufacturers' Exhibitors' Association that they intend holding an exhibition in London in June, and have extended an invitation to this association to attend, we would recommend that the Secretary send notices to each member of the Association, with an urgent request to attend same, and that our Association have a booth at London, giving the benefits of membership.

That in view of the increased work of the Secretary in getting out lists, and the many other helps to the members, we would recommend that his salary for the coming year be made $450.

That the hearty thanks of our Association be tendered to the two trade papers, Hardware and Metal, and the Canadian Hardware Journal, which have assisted us so materially during the past year.

Jos. McGregor
D. A. Macnab
R. Hawkins
A. R. Bernhardt

TO BE REDUCTION IN RATES

The address of G. W. Kingston, of the Workmen's Compensation Commission, confirmed in almost every detail the leading article in the Jan. 22 issue of Hardware and Metal, which announced that a reduction would shortly be made in the rates of the Workmen's Compensation Act tariff. Mr. Kingston stated that although the Act had only been in operation for one year, a great deal had been accomplished in that time. The officials have been working hard in order to announce the 1916 rates at the earliest possible date. It is expected that the rates for 1916 will be promulgated for this year by the end of next week. Mr. Kingston was glad to say that the rates in most cases would be downward. The rates in 1915 were higher than was necessary to carry all burdens, and with a surplus on hand it will be quite in order to make a substantial reduction this year. No money is being used uselessly. Not much over five per cent. on assessment will be found chargeable to expenses.

Class 35, in which most of the members present were interested, had four cases which came before the board in the past year. One case was rejected.

Some changes in the classification are taking place and will be announced shortly.

One member wanted to know if a chauffeur who delivered goods entirely and did no other work, came under the Act. The reply was that he did, provided the branch of industry in which he was employed came under the Act.

All employers who have not yet been included owing to their neglect, are subject to the provisions of the Act. Merchants should by this time be conversant with the provisions owing to the publicity given through the trade press and in other ways. The rate of compensation is always based on an employee's wages.

An employer who carries himself on the payroll at a certain fixed figure can be included and will be as much protected as his men.

The ordinary retailer is not included in the provisions of the Act unless he has a tinshop or plumbing department. No compensation is allowed unless a man has been disabled for seven days or more, and then compensation is allowed from beginning of disablement.

Provision has been made for including casual employees, and can be arranged by the employer.

A hearty vote of thanks was voted Mr. Kingston for addressing the meeting and the kind and courteous manner in which he had acted towards the association during the year.

DO DEPARTMENT STORES INFLUENCE PRESS?

During the discussion on alleged misrepresentation of paint in the advertisement of a Toronto departmental store, some members suggested that the department stores and mail order houses had a great influence over the press. One member told how a department store in his city had been prosecuted for fraudulent advertising and a conviction was secured, but the newspapers would not publish a report of the prosecution and conviction. Another member said it was a strange thing to him if the press of Canada was subsidized to such an extent that their editorial policies were influenced by department stores or mail order houses. Still another member thought there would be little satisfaction in prosecuting, because the press would ignore the matter.

One member suggested that if the firm in question was prosecuted and a conviction registered, the Association could have large display circulars printed, giving details, and display them in the store windows.

John Caslor, treasurer of the Retailers' Association, was of the opinion that at least some papers would publish a complete report of the proceedings should the firm be prosecuted and a conviction secured. Turning to G. D. Davis, editor of Hardware and Metal, who was present, Mr. Caslor asked, point

blank, if a conviction was secured would Hardware and Metal publish a report of the trial and conviction.

Mr. Davis replied: "If your Association prosecutes the firm in question and secures a conviction, we shall be very glad to publish the details in Hardware and Metal. Reference has been made here this afternoon to the influence the department stores and mail order houses have on the press of this country. I can assure you that they have no influence on Hardware and Metal. The paper I represent is only one of fifteen papers published by the MacLean Publishing Company, and they cannot be influenced editorially by any firm. We have one large national magazine and a farmer's magazine. To the best of my knowledge they have never carried advertising from any department stores, or large mail order houses, although I am of the opinion that such advertising has been offered."

Geo. Honsberger, representing the Canadian Hardware Journal, stated that Treasurer Caslor had evidently overlooked the Canadian Hardware Journal, but he felt sure that his paper would also publish a full report of the court proceedings, should a prosecution take place and a conviction be registered.

NEW OFFICERS ELECTED

The election of officers took place on Thursday afternoon, the following being elected:—President, W. J. Carter, Picton, Ont.; 1st vice-president, J. N. McGregor, Oakville, Ont.; 2nd vice-president, D. A. Macnab, Orillia, Ont.; secretary, W. F. Macpherson, Prescott, Ont.; treasurer, John Caslor, Toronto; auditors, Geo. Matthewson, Toronto, and J. W. Peacock, Toronto; executive committee, W. W. Bennett, Gananoque; A. J. Wright, Hamilton; A. Wideman, Markham; E. Wanless, Chatham; A. E. Bottum, Bobcaygeon; A. B. Bernhardt, Preston, Ont.

Following the election of officers, President Conn asked President-elect Carter to come forward and take charge of the meeting. Mr. Conn congratulated the association on securing such an able officer. President-elect Carter, in taking the chair, was given a hearty round of applause. He asked for the hearty support of every member, and that they all be boosters for the association. He had come to these conventions and had received untold benefit each year. The friendships made here had caused him to look forward to the convention for weeks in advance. He thanked the members most heartily for the honor they had conferred on him.

D. A. MACNAB
Orillia, elected 2nd Vice-President, O. R. H. & S. D. A.

The invitation of Chester S. Walters, Mayor of Hamilton, to the association to meet in that city next year was then read. A. J. Wright, of Hamilton, said they were trying to make Hamilton a convention city. If you decide to go to Hamilton they will have open arms to meet you.

H. Occomore, Guelph, Ont., thought the matter should be left with the executive committee. Personally, he would like to see the convention go to Hamilton. Mr. Cinnamon, of Lindsay, thought Toronto was more central, and that a better attendance can be secured by holding it in this city. He could not see any good reason why it should go to Hamilton. The matter was left with the executive.

HARDWAREMEN ATTENDING CONVENTION

The following hardwaremen registered at the King Edward Hotel on the register of the Ontario Retail Hardware and Stove Dealers' Association, in convention this week:

Charles Conn, Conn's Hardware, Tillsonburg; H. Occomore, H. Occomore & Co., Guelph; John Caslor, Toronto; W. F. Macpherson, Prescott; W. R. Billing, Windsor Hardware, Windsor; Clarence Ney, T. J. Ney & Son, Port McNicoll; Alfred J. Wright, Wright's Hardware, Hamilton; W. J. Carter, Carter Bros., Picton; A. Wideman, A. & H. Wideman, Markham, Ont.; W. H. Bennett, Bennett & Son, Gananoque; D. A. MacNab, MacNab Bros., Orillia; J. A. McGregor, Oakville; Morris Phillips, Phillips Hardware Co., Toronto; Blake L. Booth, Welland; Gordon Colton, Colton & Lorimer, Burlington; R. Hawkins, Smith's Falls; J. Roger, Atwood; Thomas Phillips, Orillia; F. F. Balsdon, Cargill; F. A. Coons, A. Sweet & Co., Winchester; C. E. McCaffrey, The Williams Chemical Co., Ltd., Russell; John Billinghurst, Boeckh Bros. Co., Ltd., Toronto; R. A. Edington, A. Ramsay & Son, Montreal; W. E. Jackman, Coldwater; A. R. Bernhardt, Bernhardt & Spalding, Preston; W. Holland, Culloden, Ont.; J. E. Hedley, J. E. Hedley & Son, Clarksburg, Ont.; J. J. Cain, Alliston; Norman Batty, Richmond Hill Hardware, Richmond Hill; O. S. Reddick, Madole Hardware Co., Napanee, Ont.; J. O'Hagan, Canadian Hardware, Paint and Stove Journal, Toronto; W. L. Edmonds, Canadian Hardware, Paint and Stove Journal, Toronto; T. Walden Thomson, T. I. Thomson, Ltd., Owen Sound; A. M. Oldham, Oldham's Hardware, Weston; Will H. Boyle, Boyle & Son, Napanee; Fred. W. Otton, H. H.

(Continued on page 43.)

W. J. Carter Elected President O. R. H. & S. D. A.

W. J. CARTER

At the election of officers on Thursday afternoon, W. J. Carter, of Carter Bros., hardware, Picton, Ont., was elected President of the Ontario Retail Hardware and Stove Dealers' Association for 1916-1917. *At the convention held a year ago, Mr. Carter was elected First Vice-President. Previous to that time he was Second Vice-President. Mr. Carter was born at Picton, Ont.,* 58 *years ago. At the age of* 12 *years, he started in the hardware business in his uncle's store. He has therefore been* 46 *years in the hardware business in Picton. In* 1882 *Mr. Carter started in business for himself in his home town. The business was first started as a tinshop, but under Mr. Carter's direction grew rapidly, and a hardware stock was added. About a year ago a number of alterations were made in the store and a handsome, yet practical and novel store front was installed, in addition to a number of improvements in the store interior. About two weeks before last Christmas, a disastrous fire broke out in nearby premises, and the Carter store and stock was practically destroyed. No time was lost in getting a new start in another store. The work of rebuilding the original Carter store is now under way, and it is the intention of Mr. Carter to make it one of the best equipped stores in the smaller towns of the Dominion. The work will be completed in about* 3 *months' time. Mr. Carter has for many years taken a deep interest in the work of the Ontario Retail Hardware and Stove Dealers' Association.*

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, FEBRUARY 26, 1916 No. 9

THE CONVENTION

THE eleventh annual convention of the Ontario Retail Hardware and Stove Dealers' Association, a full report of which appears in this issue, while not the largest from an attendance standpoint, was one of the most successful in the history of the association.

Many members were unable to be present, owing to the fact that some of their best employees had enlisted for active service, thus leaving their staffs shorthanded.

The "Question-Box" discussions were exceptionally interesting and instructive. The discussion on tenders for hardware, tinsmithing, plumbing, etc., for a dwelling house, was one of the most practical features of the convention.

That the "Service to Members" was meeting with the approval of association members was clearly demonstrated at the convention, and it was decided to enlarge the service during the coming year.

Owing to the splendid work carried on by the officers during the past year, the membership has been increased to a considerable extent. The association is in a good condition financially and the outlook for the coming year is exceptionally bright.

Many matters of vital interest to the trade were taken up and discussed at the convention, as will be learned by reading the detailed reports. Every retailer should read the various reports in this issue.

EMBARGO ON OIL CAKE

OWING to the dearth of ocean tonnage an embargo has been placed on the export of oil cake from Canada. Railway companies and steamship companies will carry this commodity now only where shipping contracts have heretofore been entered into. The value of the oil cake shipped to foreign countries during the year 1915 was $262,229. This is just about half the amount exported during the previous year of 1914, when the total value of the exports was $515,386. In the year 1913 the value of the exported product was $591,940.

A considerable quantity of oil cake was shipped to Germany before the outbreak of hostilities. The United Kingdom is by far the biggest consumer of this product. France, Denmark, Holland and the United States have in the past also bought quantities of this product.

Oil cake is a by-product of the manufacture of linseed oil. It is a determining factor in fixing the price of linseed oil. If manufacturers are unable to dispose of this by-product it will possibly mean a still further increase in the price of linseed oil.

There is a good crop of flaxseed, from which linseed oil is made, recently harvested in Argentine. If ships can be secured to bring the seed to Canada and the United States the situation may be relieved. Otherwise the price of linseed oil seems destined to go higher in price.

UPWARD FLIGHT OF CORDAGE

THE upward movement of cordage, like that of metals, seems to have no limit and the industry is passing through an era of advancing market prices. Six months ago pure Manila rope was quoted at 16c basis, and the price to-day is 21c. British Manila was quoted six months ago at 13½c lb. basis, and the price to-day is 17c lb. basis. Sisal is to-day 1¾c per lb. higher than the price quoted six months ago.

The 1916 prices for binder twine have not yet been issued, but it is expected that when they are announced next month they will be considerably higher than the prices quoted last season.

In referring to the advancing prices of cordage, the Cordage Trade Journal, an American authority on matters pertaining to the cordage industry, states that during the past four or five months it has reported more advances in quotations on rope, twine, yarn, cord, oakums, duck, etc., than in any other like period, in the past twenty-six years.

During the past few years there has been a gradual increase in the labor cost, in certain supplies used in manipulating fibre, such as cordage oil and other items representing mill cost. During the past year there has been a decided increase in the cost of burlap, used in large quantities by rope and twine manufacturers for covering purposes. Binder twine manufacturers this year will have to pay high prices for burlap, such as is used for sacking on binder twine.

The greatest increase in cost is in the raw mate-

rials. The scarcity of ocean tonnage and the abnormally high freight rates that prevail in consequence have caused extraordinary advances in the value of Manila, jute and other fibres. The cost of fibres at the beginning of this month shows increases roughly estimated from 50 to 75% over the cost for the corresponding date in 1915. The conditions which have produced the extraordinary high prices are still in full force, and their effects have by no means spent themselves, nor have yet, it is claimed, exerted their full influence.

TRADING STAMP CONVICTION UPHELD

SOME weeks ago HARDWARE AND METAL announced that the voting contest as conducted by Business Boosters Ltd., in Toronto, was found to be in contravention of the Trading Stamp Act. It was further stated at the time that the promoters of this contest were going to appeal the case and take it to a higher court. This has been done and the Appellate Court at Osgoode Hall has upheld the conviction of the previous Judge, declaring that the method used was not in accordance with the provisions of the Trading Stamp Act. Chief Justice Meredith sat on the case and maintained that the coupon given to the purchaser was a premium that came under the Act as it did not state on the face of it its exact value, nor was it redeemable at any time.

A Toronto newspaper, referring editorially to this case stated as follows:

> Our freak law against trading stamps has resulted in a conviction which has been sustained by the Second Divisional Court. There is no likelihood of any diminution in the number of offences that may be committed.

Evidently this paper is not in touch with retail conditions or it would not call this a freak law. It is usually the case that when a daily newspaper assays to discuss retail problems, it displays a lack of knowledge which brands its discussion as ridiculous. Any retail dealer who remembers the old Trading Stamp question prior to 1905 will appreciate the present conditions as a Godsend to the trade. Retailers had to purchase Trading Stamps from the company manufacturing them, and gave them out to customers who purchased certain quantities of goods. It meant a great scramble for Trading Stamps on the part of many with the result that they were purchasing goods, the value of which was very doubtful taking into consideration the price. The consumer frequently got stung as well as the retailer who had to buy the trading stamps. They were a discount from the price of the goods, or they meant that the retailer had to charge more for his goods. Yet the newspaper which affirms a warm spot in its heart for the poor people actually upholds a system that is certainly not in the interests of the general public.

Why should not business be done on a straight business principle? If a man has something to sell, let him sell it on its merits and get behind it with his selling power. If he has got to give something away in order to make a sale, there is something lacking somewhere. It is high time that every publication, whether daily or trade, recognize this fact.

DIFFERENCES OF FARMERS AND MERCHANTS

THE report of the recent Saskatchewan Grain Growers' Association Convention is of special interest to the retail trade. It was asserted at this Convention that an Eastern manufacturer who had contracted to supply the Co-operative Wholesale Department of the Saskatchewan Grain Growers' Association with a large order was compelled to cancel the contract, owing to what is termed as a threat on the part of the Retail Merchants' Association of that province. It is declared that the threat meant that all orders with the manufacturer in question would be cancelled with members of their Association.

This brings us back to the oft-discussed problem of the organization of Farmers' Clubs to purchase direct. It is too bad that the retailers and the farmers who are both so well organized in Saskatchewan cannot come to some definite arrangement with regard to this matter. It really should be easy to explain to the Grain Growers and Western farmers that in order to build up a community they should purchase their goods at home. The farmers, no doubt, have certain criticisms to make of the retailers. They may well ask about many of them, as to why they do not give a better service in the matter of assortment, settlement of claims, and possibly in some cases from the standpoint of price. It is an undoubted fact that farmers can purchase direct from some wholesalers and manufacturers who will sell to them at lower prices than they can from the retailer. This is natural and needs no explanation. However, it is only right and fair that the home town merchant should get the business, unless there is some very great reason why he should not have it.

ANYONE who makes a study of the retailing of automobile accessories cannot fail to see that the business is rapidly working into the hands of the retail hardware trade.

* * *

THE COLLECTION of accounts is not always a pleasant duty, but it is a necessary one. Allowing debts to continue until they come within the "no good" class has caused the downfall of many a merchant. A man should go strongly after that which belongs to him. He knows that when his own bills become due he has to meet them promptly. He should give his customers to understand the same thing.

WHAT OTHER PAPERS SAY

TAKING ON NEW LINES

From National Hardware Bulletin

One of the several good ways to increase your business is to add new lines. This idea, however, carries some problems of its own. A member told us recently that he got stuck oftener with new specialties than in all other ways combined.

It is noticeable, though, that this same member is not missing any good bet of this kind and that his store has the latest of everything in stock. There must be value in the idea even if we do sometimes choose articles unwisely.

This drawback, however, is rather too common and somewhat expensive and is one of the chief causes of dealers following the lead of other merchants instead of taking to the open, and pioneering it with lines where they would be freer from competition.

Usually a new line is taken up first by a live, progressive dealer, who, being on the lookout for such things, has noticed its possibilities as a seller; if he makes good with it, one after another of the competing dealers take it on also until all are handling it.

The latter add it to their stocks either because they have had some demand for it or more likely because they have noticed that the first dealer is making money out of it.

Now, there are articles which all can handle profitably and there are other articles which cannot be so handled.

In the latter case the sale is limited, perhaps there is just about trade enough so that one dealer could afford to handle it and carry a satisfactory assortment, but as the others take it on the trade is divided and subdivided, profits are cut to encourage sales and the time comes when there is no money in it for anyone.

We know of a dealer who found himself in this situation with a good stock of implements on hand; he held an auction and closed them out, and with the money thus acquired opened a first class furniture department. There was not another furniture stock worthy of the name in town—that was why he chose this line; we have also seen harness, gas engines and tractors, and five to twenty-five cent departments taken on in the same way and these dealers made good because they had these fields practically to themselves, the other dealers staying out largely because of the considerable first cost.

Also we have seen forsighted dealers refuse certain lines offered them because this particular trade was already developed to a degree which they recognized as being about the limit of profitable business.

This is a point which should enter into the plans of every dealer who is branching out and working to build a new trade. Think and investigate for yourself. Find the new and undeveloped fields. Things may not always work as you might desire even then, but your chances of realizing that fine business you are dreaming about will be better then than when you blindly follow the other fellow's lead.

EFFICIENCY IN SELLING

From American Artisan

Some would-be-clever newspaper paragrapher has defined an ideal salesman as a man who can sell things not needed to those who do not want or cannot afford them.

It would hardly be possible to compose a definition of an ideal salesman which is as far from the correct as is this one, for the one point that the ideal salesman keeps in mind all the time is that a true sale is one which gives full value in quality, use and satisfaction to the purchaser, and surely if the person cannot afford to buy the article or does not want it, there can be no satisfaction on his part, even though he may be importuned into purchasing the article.

No. True salesmanship consists in so emphasizing the good points of the article that the prospect comes to an appreciation of the greater comfort, convenience, luxury, pleasure, ease he or she may secure by its possession. This creates desire on the part of the prospect, and the truly efficient salesman makes certain that proper consideration is given to the cost, so that the prospect may carefully weigh the advantages that come with the ownership against the outlay of money which the purchase involves. Not until all this has been settled satisfactorily in the mind of the possible customer will the "ideal" salesman consider his work well done.

It is true that in many instances, for instance, the writing out of an order or a sales check and presenting it to the customer for signature, is seized upon as a means of closing the purchase, but the "ideal" salesman never does that except when he is fully convinced that the customer is thoroughly satisfied as to the merits of the proposition, and is simply in the attitude of indecision which so many of us habitually fall into, because we dislike to make a decision.

The "ideal" salesman knows and acts upon the rule that in order to have a sale truly satisfactory there must be a mutual benefit—to the purchaser and to the seller—which must be recognized at the time of the sale, so the "ideal" salesman does not sell things that people do not want nor those which they cannot afford.

PICRIC ACID

From the Brass World

Benzene, a redistillation product from benzol, is used in the manufacture of carbolic acid or phenol; this in turn is the basis of picric acid, which latter is the base of most of the high explosives used at the present time in the European conflict. When phenol (carbolic acid) is treated with nitric acid, a nitrate called tri-nitro-phenol is formed. Its only use is as an explosive. It is not only an expolsive of itself, but more particularly is used as an ingredient of special explosive mixtures. Most of the new so-called shell-filler explosives are either picric acid or mixtures of picric acid salts called picrates. Among these are ecrasite (Austrian), lyddite (English), melinite (French), shimose (Japanese), etc. The exact compositions of these are secrets carefully guarded by the different governments.

AVALANCHE OF INQUIRIES

From Iron Age

With further price advances, and the end not yet in sight, withdrawals and postponement of new steel-taking projects occur, but they are as nothing in comparison with the avalanche of inquiries which are expected in early weeks from non-belligerent nations. The vague and general feelers from these sources are fast giving way to requests specific as to kind, amount and delivery. They come from quarters which have been waiting, for one reason and another, until the war should close, and their needs are urgent. The peace and war demands from the outside thus are calculated to keep the mills busy if domestic consumers are not willing to pay present high prices. There are numbers who have counted on softer prices in the last part of the year, but the trend of recent weeks has convinced some large consumers they have overstayed.

HOW EGYPTIANS SAWED STONE

From Simonds Saw News

The ancient Egyptians cut granite by means of long copper saws fed with emery powder. Blocks as long as seven and a half feet were sawed out with these saws. In the sides of some of these ancient sawcuts are deep scores, probably caused by fixed cutting points of emery inserted in the copper blades. A fragment of a broken copper saw was discovered in the saw cuts in the hard limestone composing the Palace of Tiryns, together with chips of emery which were evidently used for fixed saw teeth. To cut circular holes the Egyptians used tubular drills, either fed with powder or having fixed teeth. All kinds of stone from alabaster to carnelian were cut in this way, and the inside of the holes was smoother than the cores in modern rock-drilling.

STEEL AT DOUBLE PRICE

From American Metal Market.

For a long time the metal trade has been more or less familiar with prices doubling. Tin, in fact, doubled the first week in the war, and spelter later rose to more than five times its old low point, but until very recently there have been no cases of any common steel product doubling in price. Now cases of doubling begin to appear. We append a list embracing some of the steel commodities that have thus far doubled in price, giving the low and the present price. It should be noted that the present price is for forward delivery, whereas at the low points, generally in December, 1914, though in some cases at later times, forward and prompt deliveries were at the same level, or else prompt was a trifle lower than forward. If present prices were taken for prompt instead of forward delivery the advances shown would be much greater.

Steel at Double Prices.

	Low	Present
D. H. billets	$18.75	$38.00
Plates	1.05c	2.10c
Structural rivets	1.35c	2.70c
Shafting	70%	40%

Common iron bars at Chicago make a corresponding showing, having been down to 90c, while they are now quoted at 1.90c.

The average of all important finished steel products, as shown by our composite finished steel, has advanced from 1.4225c to 2.275c, this being equivalent to precisely 60%, and amounting to $17.05 per net ton.

DO WE WANT A BANKRUPTCY ACT

From the Credit Men's Journal

Our Association has gone on record as opposing a Bankruptcy Act established along lines where the cost of operating will eat up most of the assets.

Our objections are:

That at the present time we have Assignments Acts in the Provinces, which have worked out fairly satisfactorily, practically the only two objections being that no provision is made for compelling a debtor to assign, and that the Acts in the various provinces are not uniform:

That there would have to be Bankruptcy Courts formed and officers and judges appointed in numerous districts to deal with insolvency matters:

That this would be very cumbersome and expensive in the working out of estates and realization of the assets:

That the fact of every important step having to be approved by the court would retard the winding up of estates. This is amply demonstrated in the Province of Quebec as compared with the prompt handling of estates in other Provinces:

That the fact of having to make these applications to the court would necessitate the employment of solicitors to attend such applications—more expense.

We have submitted to the Minister of Justice that if any change is to be made, we would suggest a National Assignment Act, incorporating the best features of the present Provincial Assignment Acts and having a clause covering applications for compulsory assignments when the debtor has been proved as having committed acts of insolvency and carrying with it the discharge of an honest debtor.

The Chief Justice has been good enough to promise that any proposed Act will be submitted to the Association for our consideration.

THE NATION'S BUSINESS

From Financial Post

Sir Thomas White has broken new ground in Canadian revenue gathering by proposing the bold step of directly taxing profits of business. Most significant and commendable of all the features of the budget is the Government's determination to pay a greater share of the cost of carrying on the war as it progresses. Canada should respond to this necessity as readily as to the demand for men.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

ARTICLE V.

IN previous articles of this course the problems taken up have only required the use of a compass and rule. It was not even necessary to have a drawing board.

In this article it will be necessary to procure and use a drawing board. A **T** square and a number of triangles of various degrees, as well as the compass.

Fig. 1. To Divide a Circle Into Four Equal Parts

First draw a circle, and with the **T** square draw a line through centre of circle as shown. Now take the triangle which by the way is a 90 and 45 degree triangle, A being the 90-degree angle and BC the two 45 degree angles, by allowing AC to rest along edge of the **T** square, the line CD may be drawn thus dividing the circle in four equal parts.

Fig. 2. Divide Circle in Eight Equal Parts

Having divided the circle, Fig. 1, into four parts, the triangle may now be used in another way, by using the angles CB, and placing the triangle in the position shown, always cutting the circle at centre in every case.

Fig. 3. Divide Circle Into Six Equal Parts

Draw another circle and make use of another kind of triangle, that of a 60 x 30 degree triangle. By allowing this triangle to rest against the edge of the **T** square and cutting the circle at the centre alternately, the circle will be divided into six equal parts.

Fig. 4. Inscribe a Hexagon in a Circle

Draw another circle, follow out instructions given in Fig. 3, and join the various points developed as shown by using the same triangle. This will complete the desired hexagon.

Fig. 5. Divide a Circle Into Three Equal Parts

First draw a circle. Now draw three lines from centre to cut the circle at different points by placing the same triangle as used in Figs. 3 and 4, the parts A B C will be equal.

Fig. 6. Inscribe an Equilateral Triangle in a Circle

To work out this problem, draw a circle, and follow out the instructions given to describe Fig. 5. And, by again using the same triangle it will be found that the points will be in true alignment with each other and simply require to be joined, thus forming a true equilateral triangle.

Fig. 7. Divide a Circle Into Eight Equal Parts by Using a 22½ x 67½ Degree Triangle

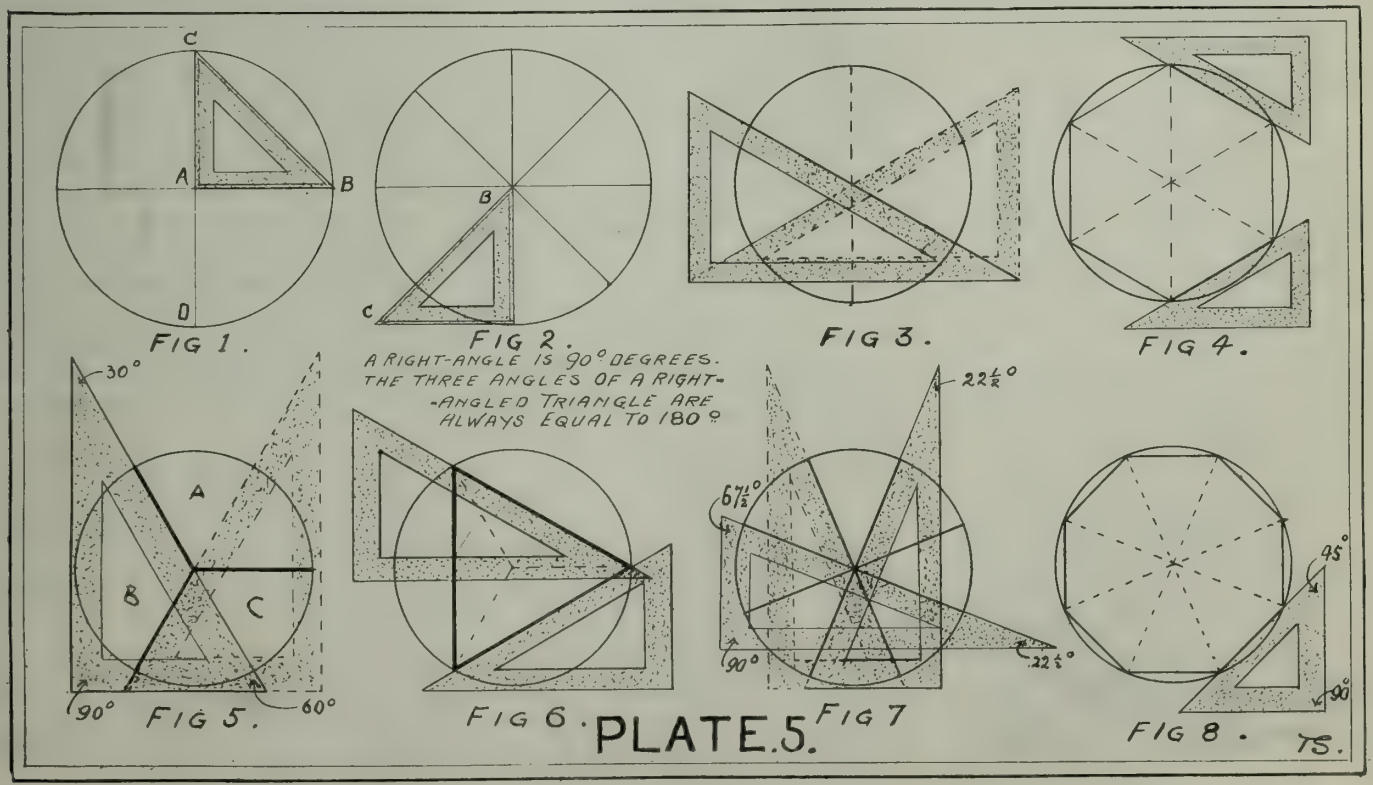
Draw a circle, and by placing the 22½ x 67½ degree triangle in the various positions shown, then drawing lines through centre of circle, the circle is divided into eight equal parts.

Fig. 8. Inscribe an Octagon in a Circle by the Use of Triangles

First draw the circle, then follow out the instructions previously given in Fig. 7.

Then take a 90 x 45 degree triangle and join all the points shown on circle by the dotted lines. This will complete the desired octagon.

(Continued in next issue.)



EVENTS IN THE TRADE

The Stratton Level

Goodell-Pratt Company, Greenfield, Mass., is distributing free to the trade an attractive 16 page booklet entitled: "The story of the Stratton Level." A supply of the booklets will be furnished to dealers for distribution if desired.

Western Canada Personals

L. J. Morris, of the Estevan Hardware Co., Estevan, Sask., returned last week from Winnipeg, where he has been staying for the past four weeks, transacting business and visiting friends.

Business Changes

Ninga, Man.—Arthur Reiger, hardware, has been succeeded by R. L. Mitchell.

Forget, Sask.—S. E. Dohlquist, hardware, has been sold to Forget Implement Co.

Business Changes

Harris, Sask.—The partnership heretofore existing between A. E. Jones and Chas. A. Trapp, under the name of Jones & Trapp, has been dissolved. All debts against the firm will be settled by A. E. Jones, who continues the business.

Metal Statistics, 1916

The ninth annual edition of "Metal Statistics" has recently been issued by the American Metal Market and Daily Iron and Steel Report. The book consists of 368 pages.

Western Canada Notes

W. J. Wilson, sales manager of the Winnipeg Ceiling & Roofing Co., Ltd., Winnipeg, arrived back from a month's business and pleasure trip in Ontario last week end.

Walter B. Ramsay, President

Montreal, Que.—A. Ramsay & Son Co., Ltd., will continue business under the following directorate, a change being brought about by the death of Alexander Ramsay:—Walter B. Ramsay, president and managing director; Arthur D. Brown, manager; Evan Jones, secretary-treasurer.

Five Employees Enlist

Hamilton, Ont.—A farewell party was recently given to five employees of Kent, Garvin & Co., Ltd., who have enlisted for active service. The event took place at the residence of Fred Garvin, and wrist watches were presented to the following who have enlisted: J. S. Richardson, E. Graham, J. Hill, F. Packman, N. Miles.

Fire Losses

Toronto, Ont.—Fire did $200,000 damage to the seed warehouse of Wm. Rennie Co., Toronto.

Moncton, N.B.—Fire destroyed the main building of the Record Foundry & Machine Co., but did not reach the munitions factory or buildings being fitted up for barracks.

Will Make Billets

The Manitoba Steel Foundries, Ltd., Winnipeg, which was incorporated last week with a capital of $100,000 is a branch of the Manitoba Rolling Mills Co., Ltd., whose plant at Selkirk, Man., is completed, but has not yet commenced operations. The Manitoba Steel Foundries, Ltd., will instal an electric steel furnace, of which there are as yet only one or two in this country. They intend to make billets. Peter J. Smith is the general manager, and has offices at 1006 Electric Railway Chambers, Winnipeg.

Personals

Geo. Ramsden, hardware traveler, Toronto, is spending the winter in Southern California.

S. L. Adolph, hardware merchant, Listowel, visited the Toronto office of Hardware and Metal, this week.

M. F. Gay, sales manager of the Seattle branch of the General Roofing Mfg., Co., called on the Vancouver trade last week.

G. S. Kilbourn, of Calgary, who has been in Owen Sound for some time has accepted the position of managing director of the Canadian Malleable Iron Company, and will in future reside in Owen Sound. Mr. Kilbourn is an ex-president, having lived in Owen Sound up till six years ago, when he moved West to look after the interests of the Canada Cement Company in the West. He was at one time secretary-treasurer of the Portland Cement Co., and was interested in other manufacturing enterprises.

Obituary

Halifax, N.S.—The death occurred, after several months' illness, of George E. Smith, hardware merchant, of the old-established firm of G. E. Smith, Cheapside and Bedford Row. Mr. Smith was one of the most experienced hardware merchants of the city, having been in the business here for about forty years. For years his son—Major Albert Smith, was associated in the business with his father after the firm located in the present stand, where years before and for a long period the P. Walsh Co. built up and conducted a most successful establishment in the hardware line. The death of Major Smith some few years ago added to the burden of the senior partner and required his constant close attention.

The late Mr. Smith was well known throughout the Maritime Provinces. Interment took place at Halifax last week.

Winnipeg News Items

The following is a list of some of Westerners who visited Winnipeg during bonspiel week:—C. G. Cram, Moore Park; Theo. Dennison, Rosebank; H. M. Hall, LeRoss; J. F. Campbell, Miama; D. A. McIlquham, Alexander; Sutherland & Stelck, Dauphin; H. W. Davidson, Brookdale; J. M. Taylor, Travers; M. A. Boyd, Duval; W. R. Lavery, Newdale; C. Ralph, Neepawa; J. A. Mooney, Wadena; M. Goldman, Roblin; John McElrea, Sidney; J. G. Hallson, Kamsack; D. Hall Sutherland, Canora; R. L. McNaughton, Craik; W. V. Stevens, Harding; P. Wegener, McNutt; Geo. Zimmerman, Swan River; A. Babb, Portage la Prairie; I. H. Culvert, Moosomin; E. Worden, Weyburn; J. A. Fraser, Kenton; L. D. Osborne, Oak River.

Jos. A. Merrick, secretary of Merrick-Anderson Co., Ltd., Winnipeg, leaves California on February 25 for home. Geo. A. Merrick will remain there several months longer.

W. H. Sparling, of Minnedosa, was in Winnipeg curling, and was a prize-winner. E. B. Williams of the Miller-Morse Hardware Co., Winnipeg, was one of the rink which was in the jewelry class. He played third for Gunn, Elmwood.

Peter J. Smith, general manager of the Manitoba Rolling Mills Co., Ltd., Selkirk, Man., will not be back in Winnipeg until March 10.

"The retailer has driven more business away by allowing some of his customers to build up their accounts to too large an amount, and then pressing settlement, than from any other reason."—Harry Annis, vice-president of Marshall-Wells, Winnipeg, in a recent address.

ST. JOHN, N.B. NEWS

W. H. Thorne & Co Rebuild

W. H. Thorne & Co., Ltd., wholesale and retail hardware dealers, who recently suffered a fire loss of $200,000 have decided to rebuild and extend their premises. It is understood that, for a while they contemplated a change in site and the erection of a new building but finally decided to remain in the spot where their big business has been developed. Of their three adjoining and communicating buildings only the central one was gutted and this will be rebuilt on more modern plans and with greater safeguards against fires. Improved fireproof doors will separate all departments and additional fire fighting apparatus will be installed. It was in the packing and shipping rooms in this building that the fire broke out and, to prevent a recurrence of this a new addition to be erected in the rear where these departments will be located, with absolute fire protection between them and the main buildings.

Chairman Board of Assessors

Clarence B. Allan, for many years one of the leading hardware merchants and ship chandlers of the city, has been appointed chairman of the board of assessors of the city of St. John, N.B. and will soon enter upon his new duties. Owing to temporary ill-health Mr. Allan closed out his business a couple of years ago and retired.

Candidate for Office

C. Fred Fisher, roofer and dealer in roofing supplies, has announced that he will be a candidate for the office of city commissioner at the elections in April. Mr. Fisher ran at the last election, two years ago, and came within a few votes of being elected. The city government is carried on under the commission form, St. John being the first city in the Dominion to adopt this system. The mayor is elected for two years and four other commissioners serve four year terms, two retiring every two years.

New Publication

The first number of the "Maritime Retail Merchant", the official organ of the Maritime Retail Merchants' Association has made its appearance. It will appear monthly, the secretary of the association acting as editor. The first number has forty-eight pages of reading matter, with an attractive cover, and deals with matters of interest to retail merchants generally, with special attention to the work of the association.

HARDWARE FIRMS HANDLE AUTO ACCESSORIES

Following are extracts from letters recently received by Hardware and Metal from hardware firms handling auto accessories:

F. W. Jeffery & Sons, Midland, Ont.—"We are putting in a stock of automobile accessories, and will be ready for business in this line by April 1."

C. P. Moore, Sydney, N.S.—"We handle auto accessories and auto tires. These we found a good line last year, and we expect to go into them more extensively during 1916."

H. H. Otton & Son, Barrie.—"We have been gradually working into the auto accessory business, and this year we are placing in stock automobile tires and accessories."

Thompson & Sutherland, Ltd., North Sydney, N.S.—"We handle auto accessories, and are gradually going into this line pretty largely."

CATALOGUES AND BOOKLETS

Presto Electrical Specialties

Metal Specialties Mfg. Co., Inc., 730-738 West Monroe Street, Chicago, Ill., have issued an attractively gotten up 27-page catalogue featuring Presto electrical specialties and "Anchor" bayonet type connectors, plugs, lamp sockets, switches, etc. Copies will be supplied on request.

Gas Making and Consumption

The latest booklet of the Tirrill Gas Machine Lighting Co., manufacturers of the Tirrill "Equalizing" Gas Machines, high efficiency gas burners and gas appliances of every description for every conceivable purpose, is just off the press, and will be mailed FREE to any one, addressing the Company at their New York Office, 103 Park Avenue, New York.

Motor Car Accessories

Humboldt Machine & Stamping Company, Long Island City, New York, has issued a 20-page catalogue featuring motor car accessories including shock absorbers, tire holders, oil gauges, foot rests, robe rails, mirrors, bar bumpers, license brackets, foot accelerators, wheel pullers, hub caps, valve lifters, etc. Copies will be mailed on request.

HARDWARE LETTER BOX

Cut-A-Way Disc Harrow

Wagstaff & Vestrup, Nakusp, B.C.—"A firm in Quebec makes an implement known as a Cut-a-way disc harrow. Will you endeavor to locate the name of this firm and send the name and address to us?"

What is described as the only Double-Action Cut-a-way Disc Harrow made in Canada, is manufactured by A. Belanger, Montmagny, Quebec.—Editor.

Manufacturers of Cotton Waste

The Glenwood Hardware Co., St. Mary's Rd., Winnipeg, Man. — "Will you kindly give us the names of firms manufacturing cotton waste?"

Scythes & Co., Toronto, Ont; Montreal Cotton & Wool Waste Co., Montreal, Que.; Factory Waste & Metal Co., Montreal, Que.; Canada Wool Stock Co., Dundas, Ont.—Editor.

NEW HARDWARE GOODS

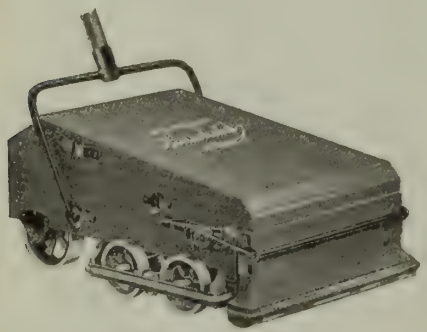
OFFERED TO CANADIAN HARDWAREMEN

NEW VACUUM SWEEPER

The Bissell Carpet Sweeper Company, announce that a new, low priced Vacuum Sweeper, to be known as the "Household" is now ready for the market. It will retail in Canada at $7.00 and $7.50.

The Company announces that the low price is made possible by various economies in manufacture affecting the case and some of the mechanical details without sacrificing, however, the elementary mechanical principles for efficiency and convenience that characterize Bissell's entire vacuum line.

The "Household" has a rear-emptying dust-bag (said to be an exclusive Bissell feature) a finger movement can dump and abundant suction power. It is somewhat lighter in weight than Bissell's other model, but is of sturdy construction.



Bissell's Vacuum Sweeper

The makers state that the near machine has been gotten out in accordance with the usual Bissell policy of developing, cleaning, machines to meet every reasonable demand.

28 IN. ALUMINUM LEVEL

J. Sand & Sons, Detroit, Mich., announce their new No. 28—28 inch aluminum level. The makers state that the new level fills a want in a size between 24 and 30 inches. The same features are retained in the 30 in., having four plumbs and two levels reversible, works either end or edge up. It can be used, high or low, up or down, no matter how it is picked up, it is always in correct position for use.

The two center levels can be used to level work in the ordinary way by using bottom edge, or the top edge can be used under the work to level ceilings, beams, girders, etc. This the makers claim is handy, convenient and saves time, and on account of the original designed frame it is easily handled.

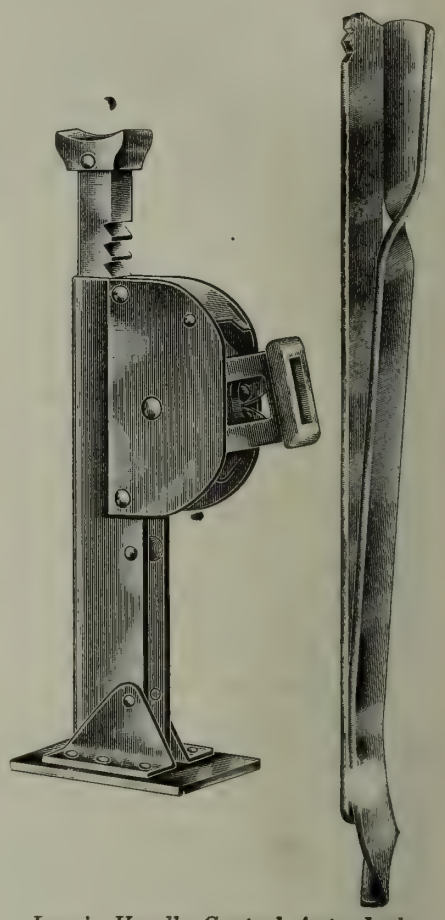
The levels are light, strong, non-rusting and proof against warp. All spirit glasses have wire bands instead of indelible lines that are cut in the spirit glasses. The spirit glasses are covered by plate glass which makes the parts dust, dirt and waterproof. Descriptive matter regarding the new line will be supplied on request.

Sand's 28-inch Aluminum Level

JACK CONTROLLED FROM HANDLE

A new jack, the movement of which is said to be entirely controlled by the detachable handle, has been placed on the market by the Lane Brothers Company, Poughkeepsie, New York. The accompanying illustration shows the jack and handle; when ready for use, the handle is placed on the jack, which is then pushed under the car, thus eliminating, it is said, the necessity of crouching beneath in an uncomfortable position. Then, according to the manufacturers, the jack is raised by pushing the handle all the way into its socket and pumping a short stroke in the usual manner, and lowered by pulling it back a short distance and pumping. A spring catch in each position is said to hold the handle securely and can be quickly released to remove the handle from the jack, by pinching the trip lever. The handle is jointed in the middle and can be folded in convenient form for stowing away. Price three to four dollars, depending upon the size.

Further particulars of the new jack and similar devices may be secured from the Lane Brothers Company, Poughkeepsie, New York.



Lane's Handle Control Auto Jack

SHAVING BRUSH DISPLAY

The Boeckh Bros., Company, Toronto, are now supplying along with their "steel grip" shaving brushes, an attractive display case for counter use.

The case shown in the accompanying illustration has a glass front. A separate compartment has been provided for each brush. Provision has been made for showing thirteen brushes at one time.

Boeckh Bros. counter display case.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

The feature of the week has been the continued upward movement in the price of iron and steel products. Many Canadian wholesalers find that stocks of some lines are already becoming diminished, with no assurance as to the availability of future supplies. Business continues active and there is a good demand for most staple lines. Following last week's announcement of further advances in the American wire markets, there have been many price advances here. Some of the lines affected are bails, staples, smooth steel wire, annealed hay wire and bale ties, stove pipe wire, picture wire. Other lines affected, nearly all in an upward direction are Canada plates, terne plates, tinned iron, black and galvanized pipe, tee and strap hinges, oakum, blocks, files, paper, butts, japanned wares, toe- calk steel, lead sheets, stove boards, coal hods, padlocks and lock sets. The paint markets are very firm, with some further advances predicted. A good number of Ontario hardwaremen attended the hardware convention at Toronto this week.

The market reports this week are full of valuable information on market conditions. It would be impossible in the space devoted to markets at a glance to give a complete summary. Every hardwareman should read all the following reports:

MONTREAL

MONTREAL, Feb. 25.—Continued upward movement of manufactured steel and iron, and the higher products of these metals, is the feature of the week in the hardware trade, although first place should hardly be given to price changes without commenting at the same time upon the very satisfactory manner in which business is being maintained. Just where the advances in steel and iron will end seems to be problematical. For a time there was a comparative lull in local price changes, following a period of feverish buying on the part of the trade, but recently there have been material increases recorded on several lines by the American mills and these have again forced up quotations. Canadian dealers say that they are keeping prices as low as conditions warrant but that with diminishing stocks and indefinite assurance as to future supplies they are forced to move quotations up. They submit that at present prices the goods could not be bought in the States and brought into Canada at the figures they are quoting and survey of the two markets bears out this contention.

Business activity continues in general staple lines and the manner in which goods are being ordered indicates that the average retailer will have a good, substantial stock when the spring opens. Recently the movement of wire cloth and some of the other lighter commodities which were booked forward commenced. From this time on the volume of shipments on bookings will increase, although it will not be until after the opening of navigation brings about the adjustment of freights to lower levels that the big movement will take place. A good seasonable demand for sugar utensils is noted.

Following the announcement last week of further advances in the American wire market there have been increases in bails, staples, smooth steel wire, annealed hay wire and bale ties, as well as in stove pipe and picture wire. Other advances this week cover Canada plates, tin plates, terne plates, tinned iron, black and galvanized pipe, tee and strap hinges, oakum, English blocks, files, Kraft paper, butts, japanned ware and certain old materials.

In view of the American advance recently on bars, plates and shapes and tin plates and a strong situation in galvanized sheets, some further advances in departments affected thereby may be looked for.

The metals have been comparatively quiet after the activity of the past couple of weeks. Generally the increases have been well maintained, but there are indications that the movement is approaching its apex. Lead and spelter are marked up and tin and copper are fractionally higher, although there has been no general change in quotations.

Tin.—Although the same quotations hold in the tin market as were given a week ago, there has been a continued display of strength and advances are to be expected. However, there are indications in the reports from outside markets that the upward movement is at the top; in fact there has been some reaction in futures. Large consumers who bought heavily on the upward movement seem to have been impressed with the fact that the high levels on futures did not hold when the buying stopped and are, therefore, inclined to wait developments before going into the market again. Foreign advices indicate a firmer situation than is now forecast in the States and London is comparatively strong. Locally present prices may be expected to hold or advance unless there is more marked reaction in Southern markets than is now in evidence. Montreal quotation: 47-47½c, firm.

Copper.—The rapid upward movement in the copper market seems to have been checked during the week and, although business has been done at fractionally higher prices than during the previous week, the basis of quotations at writing are practically unchanged from last report. A measure of reaction on the part of the London market was the chief factor in putting on the brakes, it having been the British buying which was chiefly responsible for the rise. The check in the English situation came after a movement which commenced about the middle of December and has been consistent ever since. That some reaction should come after such a steady advance was logically to be expected and there is now considerable speculation as to whether it indicates that the apex of the market has been reached or whether the lull is a temporary one. American producers have as yet shown no change in their attitude and they are so well sold up that bearish talk is not likely to have much effect on them for the time being; their strength is that the consumption of copper is such that there is a demand for practically every pound that can be offered. Montreal quotation: 32-32½c, firm and steady.

Lead is Again Higher.—Lead has again scored a gain of another quarter cent in the local market, the advance following a further fractional increase on the part of the American Trust. New York reports the situation as being quiet, but firm. This is not an indication of weakness, but rather there is a pause following the heavy buying movement which has been in evidence for some weeks. There is some talk of higher prices, but for the present this appears to be rather on the part of second-hands than producers. Montreal quotation: 8¾-9c, steady to strong.

Spelter Again Higher.—Following the strength of the spelter market reported last week, on which the prediction of higher prices was made, local quotations have advanced a half to one cent and the situation is firm on these increases. The American situation has not shown much change, but late quotations indicate a gain of nearly one cent on last report. The consuming demand as noted in that market has not been quite so active of late but, in combination with export orders, there is said to be enough business in sight to keep the producers busy until June; so that it is not likely that there will be any material weakness develop. On the other hand certain future periods are receiving more attention with fractionally higher values indicated. Montreal quotation: 24-24½c, firm.

Antimony Steady.—There is practically no change in the local situation as regards antimony and the market remains nominal. Advices from outside sources indicate that there is a moderately active demand at fractionally higher prices than at last report. Montreal quotation: 50c, nominal.

Aluminum and Zinc.—Following several small advances recently in the American market—to which reference has been made—there has been an advance made in the local quotation. However, prices may still be regarded as of a nominal character, owing to the fact that the value of the metal puts it beyond the level of ordinary domestic consumption. Montreal quotation: 69c.

Zinc has remained steady after the several recent advances recorded and the market is now firm on the basis of last report. Montreal quotation: 31c for casks and 31½c for part casks.

Solder Scores Advance.—Following the recent advances in raw materials entering into the manufacture of solder, there is recorded this week an increase of 1 cent for several grades of manufacture. However, as has been previously pointed out, the unsettled conditions in the metal markets have resulted in the production of a number of new grades in which proportions are fixed to suit special purposes. Generally the situation is indicated as follows: Commercial half-and-half, 28c-29c, and Strictly half-and-half, 30c-31c.

Iron and Steel Situation.—There is little or no improvement in the situation as regards deliveries of manufactured iron and steel and, on the other hand, the upward movement of prices continues. Locally, last week's advance on wire has been followed by other advances on nails, staples, etc., and there are higher quotations for Canada plates, wrought iron pipe—black and galvanized—tin plates and several kindred lines. Local dealers state that not only are the advances warranted by decreasing stocks which it is very difficult to replace, but that, on the basis of the present cost at American mills, the goods could not be brought to Canada and sold at the quotations being given to the Canadian trade. A comparison of Canadian and American markets gives justification for this statement. Recently there have been further increases made in the States on bars, plates and shapes and tin plates, with a very firm market for galvanized sheets and these indications may be taken as a forecast of probable developments in the local situation. Some check to the rapid advances in Canada has been afforded by less activity in buying, but even though the demand is not so feverish as some weeks ago, it is still very strong and there will be very heavy shipments with the opening of navigation.

The Spring Movement. — Already wholesalers in the hardware trade are beginning to get out their booked shipments on wire cloth and this may be regarded as the first of the spring movement on the heavier goods. From now on the volume will increase, but it will be comparatively small until the opening of navigation with its readjustments of freight rates for the open season. Bookings this year, especially on the heavier goods, have been unusually heavy, owing to the advancing prices and the shortage of supplies threatened.

Canada Plates Advance. — Following the announcement of higher prices for tin plates on the part of American mills, there has been a material advance on Canada plates in the local market, the price of ordinary being up 50 cents and of all bright $1.05. The galvanized are not yet affected, but will probably advance before long. New quotations:

Ordinary, 52 sheets	$4 50
All bright, 52 sheets	6 30

Charcoal Tin Plates.—Charcoal tin plates are higher, following the American advance, the increase being 25 cents for each quality. New quotations follow:

IC 14 x 20 base	$6 25
IX 14 x 20 base	7 25
IXX 14 x 20 base	8 25

Another small advance is also recorded for charcoal terne plates, the IC 20 x 28, 112 sheets, 216 lbs. being up 25c to $10, and the 200 lbs. 25c higher, to $9.75.

Sheets.—There is no change this week in the quotations for black or galvanized sheets, but, in view of the advances recorded this week for tin plates, terne plates and Canada plates, it may be expected that there will be higher prices quoted in the near future. The American situation in galvanized sheets is very strong at present with advances predicted.

Tinned Iron Up Too.—Under the influence of the advance on tin plates referred to, there has been a material increase in the prices of tinned iron, quotations being up $1.00 on all gauges. New figures follow:

72 x 30, up to 24-gauge, case lots	$12 50
72 x 30, 26 gauge, case lots	13 00

Less than case, add 25 cents.

PRINCE OR PAUPER ?

The insert appeared in The Star a year ago depicting the state of the steel trade. At present the situation is completely reversed.

—From The Montreal Star.

Pipe Again Higher.—Wrought iron pipe has again advanced under the influence of the increased cost at the mills. The new quotations for Montreal and the Eastern market are given in panel.

Nails Still Higher.—The upward movement of nails continues. Following the advance in the States on wire rods referred to last week, there has been a further increase on cut nails of 10 cents, the Montreal basis now being $3.30. Cut nails remain at the former quotation of $3.10.

Staples Also Advance.—Under the same influence as nails, staples have shown a further advance of 15 cents a keg. Quotations are now as follows:

Fence staples, galv., in kegs	$4 35
Fence staples, galv., 25-lb. boxes	4 60
Fence staples, bright, in kegs	3 50
Fence staples, bright, in 25-lb. boxes	3 75

Smooth Steel Wire.—The base for smooth steel wire has been advanced 15c, the quotation for No. 0-9 gauge being now $3.45, with the following extras: No. 10 gauge, 6c extra; No. 11 gauge, 12c extra; No. 12 gauge, 30c extra; No. 13 gauge, 30c extra; No. 14 gauge, 40c ex-

tra; No. 15 gauge, 55c extra; No. 16 gauge, 70c extra.

Common sizes of O & A wire are quoted as follows: O & A No. 10, $3.61; O & A No. 11, $3.67; O & A No 12, $3.75.

Annealed Hay Wire.—In the general movement of wire products, annealed hay wire has been advanced 10 cents. New quotations follow: No. 13, $3.40; No. 14, $3.45; No. 15, $3.55.

Cut Hay Baling Wire.—Annealed cut hay baling wire has been advanced at the same time. Following are the list prices for Montreal which are now net as compared with a discount formerly of 2½ per cent: No. 9, $3.90; No. 10, $3.95; No. 11, $4.05; No. 12 and 13, $4.15; No. 13½, $4.25; No. 14, $4.40; No. 15, $4.65.

Wire Bale Ties.—Wire bale ties have also been advanced, the increase here being 15 cents all round. New quotations are as follows:

Single Loop—	Per cwt.
No. 12	$3 75
No. 13	3 85
No. 13½	3 90
No. 14	4 00
No. 15	4 15

Stove Pipe Wire.—Stove pipe wire has not escaped in the upward movement of wire products. New quotations follow:

Number 19	4¾c lb.
Number 18	4½c lb.

Picture Wire.—Likewise there are higher prices quoted for picture wire. New figures follow:

25-foot coils:	
Number 0	19c doz. coils
Number 1	26c doz. coils
Number 2	38c doz. coils
25-yard coils:	
Number 0	37c doz. coils
Number 1	52c doz. coils
Number 2	75c doz. coils
Number 3	95c doz. coils
Number 4	$1.20 doz. coils
Brass, 25-yard coils:	
Number 10	$0 90 doz. coils
Number 11	1 15 doz. coils
Number 12	2 05 doz. coils
Number 13	2 85 doz. coils
Number 14	3 85 doz. coils

Manufactured Metals.—In a number of lines of manufactured metals the indications are that there will be higher prices. This not only applies to sheets, but to boiler plates and tubes and similar products, while the high cost of copper is almost certain to have an early effect upon brass and copper sheets and tubes. Lead pipe and lead sheets are also very firm in view of the high and strong position of the lead market.

Oakum is Higher.—Still higher prices are being quoted for oakum. Plumbers spun has advanced from 5½c to 6c and United States Navy (English) from 8½c to 9c. Other qualities are also affected.

Tee and Strap Hinges.—Higher cost of the materials of manufacture is the reason for another advance on tee and strap hinges, both heavy and light. The discount on the heavy is now 27½ per cent. and on the light 57½ per cent. On this basis the new prices are as follows:

Heavy.	Strap.	Tee.
4 in., doz. pairs	$1 37	$1 16
5 in., doz. pairs	1 66	1 24
6 in., doz. pairs	1 81	1 38
8 in., doz. pairs	2 46	1 85
10 in., doz. pairs	4 35	3 04
12 in., doz. pairs	5 40	5 00
14 in., doz. pairs	6 16	5 36
London price figured net at 33 1-3%.		
Light.		
3 in., doz. pairs	0 43	0 43
4 in., doz. pairs	0 51	0 47
5 in., doz. pairs	0 60	0 55
6 in., doz. pairs	0 72	0 64
8 in., doz. pairs	1 06	0 76
10 in., doz. pairs	1 48	1 02
12 in., doz. pairs	2 55	1 91
14 in., doz. pairs	....	2 34

English Blocks Advance.—With many lines of hardware imported from England, there has been an advance on English blocks. The English iron pulley blocks and English gin and snatch blocks —all iron—are up about ten per cent. on former quotations.

NEW PRICES ON WROUGHT IRON PIPE

(In effect Feb. 18)

Montreal and Eastern List.

New File Discount.—As the result of recent adjustments by makers the discount on practically all files in the local trade is now on a basis of 72½ per cent.

Kraft Paper Higher.—Kraft paper used for wrapping purposes has been advanced in price ¼ to ½ cent per pound, according to former quotations. The new price now generally prevailing is 6c per pound.

New Discounts on Butts.—New discounts are announced on butts. In the local market these will now be as follows: No. 804 and 840, 57½%; No. 800 and 838, 50 and 5%; No. 802, 47½%; No. 808, 50%; No. 810 and 814, 45%.

Cutlery Short.—Wholesalers report that there is a general shortage of English cutlery, owing to serious delays in getting shipments through. This appears to be not only the result of delays in transportation, but also of difficulty in getting the goods themselves with so many of the metal manufacturers engaged in turning out munitions. Materially higher prices are being paid on new supplies.

Sugar Utensils Moving.—A very good business is being done at the present time in sap spouts, pails and bitts, indicating that the sugar season is approaching and that there will be considerable activity in the industry this year.

Japanned Ware Higher.—An advance has been made on japanned ware by the manufacturers, the new discounts to the trade being 35 per cent. on the colored items and 30 per cent. on the white lines. Manufacturers of kitchen utensils in general report that business is brisk and generally satisfactory, considering the prevailing conditions.

Old Materials.—Further advances for a number of scrap metals are noted in sympathy with the continued rise in the metal markets. New quotations are as follows: Zinc, heavy, 15c lb.; Copper, heavy, 20¾c lb.; Mach., compos., No. 1, 16¼c lb.

TORONTO

Toronto, Ont., Feb. 24.—The Annual Convention of the Retail Hardware Association has been the principal feature of interest this week. The Convention opened as scheduled and the large attendance of retailers from all parts of the Province was evidence of the interest taken by the trade in the proceedings. Full particulars of the meetings will be found in another section of the paper.

The general situation in the hardware trade is unchanged and business continues to move in good volume. The outlook however, is uncertain owing to the probable shortage of many lines and steady increase in prices. The situation in this regard seems to indicate that the high point has not yet been reached and that high prices are likely to continue for the balance of the year judging from reports emanating from manufacturers and sources from which raw materials come. A comparatively new development is the restlessness amongst workers in various trades in the States which is becoming daily more apparent. Strikes have already occurred at some factories and it is feared that the discontent will spread which may lead to decreased output and a corresponding shortage of goods in all lines. Wages have gone up and cost of production has therefore increased while the cost of raw materials is also increasing. The freight situation in regard to overseas shipments is becoming more acute with resultant increases in freight rates. The shortage of tonnage is serious and is causing much inconvenience to shippers. These conditions tend to further increase in prices.

Many Price Changes.—There are as

usual a number of important price changes to announce this week and indications point to further advances. Raw materials are becoming scarcer and higher and deliveries from manufacturers are getting further behind. All the changes this week are to higher levels and include the following products. Wrought iron pipe, boiler tubes, shafting, iron bars, tire steel, toe calk steel, steel angles, band steel, sleigh shoe steel, horseshoe iron, lead sheets, galvanized ware, Japanned ware, stove boards, coal hods, fence staples, sprinklers, wire, hay wire, bale ties, zinc sheets, oakum, padlocks and night latches, locks, lock sets and door knobs, etc. Pipe and other lines of wrenches have taken another advance while all malleables such as plough clevices and kindred lines have also advanced. Gasoline benzine and castor oil are also higher. Prices of lumbering tools have been withdrawn. As already stated the general trend of the market is upward and a continued advance in prices may be looked for, some lines one week and other lines the next. All raw materials are advancing. Finished and semi-finished steel, and ingot metals are all going up thus affecting many lines of hardware. The effect is so general that it is impossible to pick out any particular line for notice.

Iron and Steel Strong.—The unprecedented situation in the steel trade continues and the market is very strong with prices still advancing. It is impossible to even guess what level prices will eventually reach but as the majority of the mills are booked up until the end of the year there is every probability of considerably higher levels and little chance of a break in the market during this period. The most serious feature is the possibility of a steel famine which is now threatening and may be an accomplished fact in the not far distant future especially if the consumption continues to increase at the present rate. The upward tendency of prices in the United States and higher prices on a number of steel products have been announced following advances in the States. Boiler tubes have advanced 10 per cent. Discounts on black and galvanized wrought iron pipe have been lowered two points for the former and three points for the latter. Cold rolled steel shafting has again advanced, the warehouse price being now net list. Steel angles are now quoted at $3.00 per 100 lbs., bar iron at $2.75, horseshoe iron at $3.00, steel bars, band steel and sleigh shoe steel at $3.00, tire steel at $3.15 and toe calk steel at $3.60 base.

Pig Iron.—There is no change in the pig iron situation and quotations are at the same level as last week. Grey forge Pittsburgh iron is unchanged as is also Lake Superior charcoal iron the latter with an unusually wide spread of quotations. Hamilton and Victoria irons are unchanged.

Old Materials.—The market is steady with higher prices for copper, lead and zinc which have moved up in sympathy with the ingot metal market. The scarcity of aluminum has increased the value of scrap metal and prices have again advanced. Dealers have so far been unable to get a reduced freight rate on shipments of scrap from western points.

Machine Tools.—The machine tool market is quieter and enquiries have fallen off. Canadian machine tool builders are very active and have sufficient orders on their books to keep them busy for some time. Deliveries from American builders are still very backward as many of these concerns are sold up for several months. Standard tools are particularly difficult to obtain and deliveries run well towards the end of the year. The demand is almost entirely for machinery for munitions, normal requirements being very light.

Metals.—The metal markets continue strong and prices are still moving upward for copper, lead, tin and spelter. The copper situation continues abnormal and the trade is asking where the present movement will lead to. The persistant advance in copper is the most prominent feature in metal circles just now and the comparative scarcity of supplies will tend to force the market still higher. The tin market is quiet but a considerable volume of business has been transacted and prices are higher. Spelter is also moving up gradually following higher quotations in London for both prompts and futures. The lead market is strong following the advance by the "Trust" to 6.30c New York and quotations are also higher locally. The antimony market is active and well sold up on spot and nearby futures. The supplies of aluminum are very scarce and the market is very firm. Solders have advanced following the increase in cost of tin.

Copper Strong.—The remarkable situation in the copper market continues and the prices are still advancing. Copper producers are steadily selling their output farther ahead and spot metal is practically unobtainable. The consumption of copper is very heavy and is increasing rather than otherwise and indications point to still higher prices. Copper has advanced ½c locally and is now quoted at 31c per pound.

Tin Active.—The demand for tin has improved and quotations are higher. The market is quiet but firm and indications point to higher prices as the position of this metal is a good one. It is reported that considerable quantities of tin have been purchased in the East at comparatively high prices principally for American account, which may also have a tendency to raise prices. Tin has advanced 1c and is quoted locally at 48c per pound.

Spelter Firmer.—The market is strong and higher following an advance in London. There is an improved demand for spelter and the market appears to be entering on another buying movement. Spelter has advanced 1c and is now quoted at 26c per pound.

Lead Strong.—The market is very strong, the "Trust" having advanced price to 6.30c New York. This price is abnormal but another advance would not be a surprise as Independents are well sold up and the market is in the hands of the "Trust". Local quotations are higher at 8½c being an advance of ¼c per pound.

Antimony.—The market is active and well sold for spot and early future. Prices remain unchanged on early deliveries at 47c per pound.

Aluminum.—The market is strong and unchanged but higher quotations are probable owing to the great scarcity of aluminum. Quotations are unchanged at 60c per pound.

Solders.—Prices have advanced as was anticipated owing to the recent increase in cost of tin. Half-and-half is now quoted at 25c per pound and other prices are given in the selected market quotations.

Galvanized Sheets Strong.—The situation in the galvanized sheet trade does not improve and the market is very strong. Some of the mills have withdrawn prices their action being attributed to the further advance in spelter. Black sheets are also higher and the mills are behind on deliveries on account of the heavy demand for this material. Prices of galvanized sheets are very firm and an advance may be looked for in the near future.

Cold Rolled Shafting Up.—Prices of cold rolled steel shafting have again advanced, warehouse prices being now net list while mill prices carry a discount of 10 per cent. The mills are sold out for five to six months, specifications are very heavy and consumers are only getting about half of the shafting called for in their contracts.

Boiler Tubes Up Again.—Prices of boiler tubes both seamless and lapwelded have advanced again, quotations being now about 10 per cent. higher. The extraordinary strength in the steel market in the United States and high cost of raw materials is the reason for this advance. The mills are very busy and in many cases the output is sold for three or four months, deliveries consequently are very backward.

Lead Sheets Higher.—The steady increase in cost of pig lead has naturally resulted in higher prices for lead products, including lead sheets which are quoted as follows: Sheets 3 lbs. per sq. ft., $10,25; 3½ lbs. per sq. ft., $10.00 and 4 to 6 lbs. per sq. ft, $10.00.

Pipe Wrenches Up.—Prices of pipe and other lines of wrenches have advanced approximately 10 per cent. The cost of producing goods such as these is now out of all proportion to their value partly owing to high wages and also cost of raw materials.

Fence Staples Advance.—Higher prices for both galvanized and bright fence staples have been announced this week. The new prices are 15c per 100 lbs. higher than formerly and are as follows: Galvanized fence staples in kegs, $4.35 and in 25 lb. boxes $4.50. Bright fence staples in kegs are $3.40 and in 25 lb. boxes, $3.75 per 100 pounds.

Builders' Hardware Up.—Many lines of Canadian made builders' hardware

have advanced owing to the increase in prices of raw materials and cost of production. The advances range from 5 to 7½ per cent. according to the class of goods. "Yale" padlocks and back latches have advanced approximately 10 per cent. Higher prices have also been made on nail hammers.

Utensils.—The new discounts on galvanized and Japanned ware are given in another paragraph. No change in the meantime has been made in other lines of ware but higher prices may be expected any time. All raw materials such as sheets, copper and tin are higher and cost of production is thus increasing. Manufacturers of ware will therefore be obliged to raise their prices.

Stove Pipe Ware.—New prices have been issued for stove pipe wire which are as follows; No. 18, $4.50 and No. 19, $4.75.

Wire Again Advances. — The market is very strong and prices continue on the up grade. Smooth steel wire, No. 0-9 gauge is now quoted at $3.45 base, being an advance of 15 cents.

Hay Wire Also Advances.—The advance in the base price of wire has affected wire products among these being hay wire in coils which is now quoted as follows: No. 13, $3.40; No. 14, $3.45; No. 15, $3.55 and No. 16, $3.60 per 100 pounds. These prices are 10c. higher than previous quotations

Wire Bale Ties Up.—The advance in wire has affected single loop wire bale ties which have advanced 15c and are now quoted as follows: No. 12, $3.75; No. 13, $3.85; No. 13½, $3.90; No. 14, $4.00 and No. 15, $4.20 per 100 pounds.

Japanned Ware Higher. — Prices of Japanned ware have also advanced, the new discounts being as follows: Colored 35 per cent and white 30 per cent. The discount on Japanned coal hods is now 30 per cent. and on Japanned sprinklers 30, 10 and 5 per cent.

Stove Boards Advance. — The discounts on stove boards have been lowered and are as follows: Wood lined 60 and 5 per cent., paper lined, 60, 10 and 5 per cent.

Galvanized Ware Advance. — Higher prices for galvanized ware predicted in Hardware and Metal last week have materialized, the new discounts being as follows. Galvanized pails and washtubs are now 20 per cent. as against 20 and 10 per cent. formerly. Galvanized coal hods are now 12½ per cent. while other lines are for the present unchanged at 20 per cent.

Oakum Advances.—An advance of 5c per pound in the better grades of oakum is the biggest advance that has been made in this material for a long time. The higher grades are composed principally of Russian and Italian hemp and as both these fibres are practically unobtainable supplies being very scarce and prices high. For this reason it is feared that there will be very little American oakum on the market towards the end of the year. The cheaper grades of oakum are composed largely of jute which although higher in price than it used to be is fairly easy to obtain, these grades therefore have not advanced so much. The various grades of oakum are now quoted as follows: Best American, 16c; U. S. Navy, American 15¼; new hemp; English, 10½c, and plumbers, spun, 6c per pound. U.S. Navy English is unchanged at 8½c per pound.

Rope Firm.—Prices of rope are firm at the advance noted last week and the market is still very strong. There is no change in the situation and conditions in the raw materials markets are causing considerable anxiety in the cordage industry. Scarcity of tonnage and the abnormally high ocean freight rates that prevail in consequence have caused extraordinary advances in Manila jute and other fibres and further advances in cordage are anticipated.

LONDON

LONDON, Ont., Feb. 23.—Business continues very fair in this district, and compares favorably with the corresponding period last year. Merchants are preparing for a big spring business. Dealers are placing large orders for paints, and a good volume of business is anticipated. There are many price changes this week, and the upward tendency in values continues. Collections are good.

Linseed Oil.—The market here is very firm and higher prices are expected. Quotations are as follows:

	Raw.	Boiled.
1 to 2 barrels	$1.02	$1.05
3 to 5 barrels	1.01	1.04
6 to 9 barrels	0.99	1.02

Turpentine.—Prices of turpentine are unchanged locally and are as follows: 1-bbl. lots, 87c; 2 to 4-bbl. lots, 86c, and 5-gallon lots, 94c per Imperial gallon.

White Lead.—The market is very firm and prices unchanged at $11.45 for pure lead in ton lots, with 30c extra for less than ton lots.

Putty.—Prices are firm and unchanged as follows:—Standard putty, $2.85, and pure putty $3.35 in 100-lb. drums.

Wire Nails.—The market is strong and higher prices are expected. Present quotation, $3.15 per keg base. Cut nails are unchanged at $3.10 per keg base.

Iron Washers.—Prices of iron washers have advanced, the new discount being 35 per cent.

Brass Butts Up.—A new price has been issued for brass butts, narrow, middle and desk butts are now net list.

Thumb Latches Up.—Prices of steel thumb latches have advanced 10 per cent., No. 2 being quoted at $1, and No. 3 at $1.40 per dozen.

Tacks Higher.—Brass-headed tacks have advanced about 40 per cent.

Fence Staples Up.—Prices of fence staples have advanced 15c per 100 lbs., and are now quoted as follows:—Bright, in 100-lb. kegs, $3.50, and in 25-lb. boxes, $3.75. Galvanized, in 100-lb. kegs, $4.35, and in 25-lb. boxes, $4.60.

Fence hooks are higher, and are now quoted at $4.35 in 100-lb. kegs, and $4.60 in 25-lb. boxes.

Wrought Iron Pipe Up.—Black pipe has advanced 2 points and galvanized 3 points. The new prices are given in panel.

O. and A. Wire Up.—Advance of 15c per 100 lbs. No. 10, $3.61; No. 11, $3.67, and No. 12, $3.75. Hay baling wire, No. 14, is quoted at $380. Prices of galvanized wire are unchanged.

Barn Door Rollers.—Prices have advanced, and are as follows:—No. 843, $6; Nos. 021 and 545, $8; No. 542, $9.85; Nos. 20 and 21, $10.35, and No. 321, $13.20. Trolley track, 11c per foot.

Butts Higher.—The new discounts are as follows:—Nos. 804 and 840, 57½ per cent.; Nos. 800 and 838, 50 and 5 per cent.; Nos. 810, 814 and 842, 45 per cent.

Tee and Strap Hinges Up.—Discount for light tee and strap hinges is 57½ per cent., and for heavy tee and strap, 27½ per cent. The net prices, which are figured at 27½ per cent., are as follows per dozen pairs:

	Tee.	Strap.
4 in.	$1.16	$1.38
5 in.	1.35	1.67
6 in.	1.38	1.82
8 in.	1.85	2.47
10 in.	3.05	4.35
12 in.	5.01	5.41
14 in.	5.37	6.17

Glass.—Glass is unchanged at 30 and 10 per cent. discount. Cut lights are net list.

Miscellaneous.—The discount on harvest tools is 40 and 12½ per cent. Poultry netting 30 per cent. Spades and shovels, 1sts, 50 and 10 per cent.; 2nds, 50 per cent.; and 4ths, 40 per cent.

Screen Wire.—Painted screen wire, 100 ft. rolls, $1.87½; in 50 ft. rolls, $1.92½. Bronze screen wire, in rolls, 8c per sq. ft.; less quantity, 9c per sq. ft.

Builders' Hardware Up.—Bit braces have advanced 10 per cent.; boxwood rules about 20 per cent.; and auger bits are now quoted at a discount of 65 per cent. Locks are up about 5 per cent., and the new discount is 47½ and 10 per cent. for steel and iron locks, and 40 per cent. for brass locks. All padlocks have advanced about 10 per cent.

Iron and Steel.—Bar iron is now quoted at $2.65, and steel bars at $2.90 base.

Rope.—Pure Manila, 21c; British Manila, 17c; African hemp, 17c. Cotton rope, 3-16 in., 25c; ¼ in. and larger, 24c. Market strong.

Nipples.—New discount, 75 per cent.

WINNIPEG

WINNIPEG, Feb. 24.—During the week just passed there have been a great many customers of the various jobbers throughout the West visiting Winnipeg during bonspiel activities. It is estimated that about 20,000 visitors have been here, and they were certainly greeted with exceptionally fine weather, and it would appear that they were looked after very well socially, although it is usually figured that retailers who come to the city during bonspiel refuse to talk business. There has been considerable business placed with the jobbers for next fall's requirements. It

(Continued on page 52.)

WEEKLY PAINT DEPARTMENT

Better Use of Color Cards in Paint Business

Merchants Should Make Good Use of Color Cards—They Embody a Compendium of Main Facts of Most Scientific Knowledge Gleaned by Manufacturers—Valuable to Merchants, Clerks and Customers.

DOES the average dealer make the best use of the color cards which are sent to him each year by the paint manufacturers? Manufacturers with a wide experience say he does not. Therefore, the dealer's sales are not as large as they should be. It is increased business that every hardwareman is endeavoring to get. A little time and attention paid to this small business detail may be one of the very features that will assist materially in bringing this about.

Paint manufacturers have been sending these color cards out from time immemorial; or, to use a legal expression, since the time when man's memory runneth not to the contrary. That is perhaps one reason why they have come to be considered lightly by the dealer. Year after year they have been sent to him from the head office of the paint manufacturer. Sometimes he looks upon them as an advertising medium and distributes them indiscriminately to people who come to his store. He may even give them to the youngsters to amuse them, in the hope that they may take them home.

Cost of Color Cards

Paint manufacturers each year prepare these color cards with a great deal of care and at a big expense. The best scientific knowledge which they command is condensed and put into a few small pages of reading matter on these color cards. True, each paint company will also place a certain amount of "boost material" for their own paint on them. But when this is sifted out the meat of the cocoanut will be found in the scientific paint knowledge, which is also contained therein.

There are certain principles of paint manufacture on which all the best makers of paint agree. For instance, the makers will tell you that there is only one formula for durable paint, namely, white lead, zinc and linseed oil. One of the color cards in question put out by a well-known and reputable firm tells why this blending of certain ingredients is needed. As an example of the scientific knowledge which these little folders may contain, the following quotation is taken from one of recent issue:

"It is a well-known fact that of all known white paint pigments carbonate of lead (commonly called white lead) has the greatest body or hiding properties. Unfortunately, it lacks almost every other essential that goes to make durable and efficient painting material. First, it lacks the properties of carrying the necessary amount of oil to make it a durable and weather-resisting paint material, and second, it is not what might be termed a neutral pigment. By this is meant that it is chemically active with linseed oil, and this chemical action begins from the time the lead and oil are put together, and continues after the paint has been applied, gradually destroying the life of the oil.

"The proof of this chemical action may be observed on any painting job done with pure white lead and oil. Investigate this by rubbing your thumb over a painted surface exposed to the weather a short time, and you will see that it chalks—rubs off quite easily. These weaknesses of white lead are overcome by the addition of a correct proportion of zinc oxide. Pure oxide of zinc adds life and durability. Its whiteness, elasticity, spreading and oil-carrying capacity, when woven with white lead and linseed oil by means of powerful grinding and mixing machinery, strengthen and reinforce the natural weaknesses in white lead.

"Pure oxide of zinc is neutral in its action with linseed oil, and all other pigments, and the fact that it carries more oil than white lead, makes its use essential to good painting. While it is an acknowledged fact that linseed oil is the life of paint—the binder that grips the wood and holds the pigment on, it is also true that linseed oil must be correctly balanced with the proper proportion of white lead and zinc. An excess proportion of either oil or pigment will decrease the durability of the paint.

"These two pigments—lead and zinc—when incorporated with pure linseed oil produce a paint that is not only pure, but also efficient. This combination—white lead, zinc and linseed oil—forms into a leathery and elastic paint film, that stretches in summer, and contracts in winter without breaking. Any adulteration destroys this elasticity, weakens the resistance to extreme changes of temperature, and finally results in the paint cracking and scaling."

How to Apply Paint

Here is a basis for a scientific knowledge of the paint business which any dealer can acquire in a few minutes of concentration. And it is all embodied in that little folder called the "color card." It is true that each manufacturer has his own particular choice of material that he embodies in his color card. There is one feature which they all contain, namely, instructions on the application of paint. These are points which the dealer should be thoroughly familiar with. If he can first direct his customer in the best way to use the paints, the paints are sure to give the best satisfaction. If the dealer can "off his own bat" give the necessary instructions that will insure the proper use of the paints it will mean business for him in the future. Invariably dissatisfied customers result through a failure to observe proper precautions in the application of paints.

If the dealer can give these instructions in a few brief words, they will "soak in" to a certain extent on the first application with the customer. If this kindly advice is followed up by the presentation of one of the color cards with the request that the instructions be thoroughly digested before proceeding with the application of paint it is safe to say that the customer's mind will be sufficiently charged with his subject to insure a proper application. Of course, there are minds and minds. It is perhaps safe to assume that the average mind will be able to absorb a little bit.

Here, then, are ways in which the little color card can be turned to real value by the dealer. First, he should acquaint himself with the scientific knowledge they contain in an abbreviated form. This is valuable as talking points. Secondly, he should give instructions as to the proper application of the

paints. This is always contained in the color card folder. When a customer purchases paint he should furthermore be directed to read carefully the instructions contained in the color card. Thirdly, the dealer should insist that his clerks also acquire this knowledge from the color card. It is also essential that they be well primed with talking material.

WEEKLY HARDWARE MARKETS

(Continued from page 49.)

would appear that the retailers appreciate more than ever the value of booking their orders in advance, and many times in these columns has there been mention made advocating this step. With the unsettled condition of the market, retailers cannot go far astray in anticipating their wants a long way ahead.

The jobbers report that business during the past week from their travellers and through the mails has shown considerable improvement, and they expect from now on to have all the orders which they can take care of conveniently.

The markets during the past week have shown very little change, and, although jobbers report increased prices on a great number of minor lines, the items which are usually affected, such as nails, barbed wire, galvanized sheets, etc., have not altered.

There has been a revised price issued on cut nails, however, the base now being $4 per keg.

Planished copper also shows a slight increase, and to-day's ruling price on 14 and 16-oz. is 44c per lb.

Wrapping paper also shows an advance, and to-day's price on the kraft is 6½c per lb.

During the past week revised prices have been made on various lines of tinware and Japan ware, this advance averaging from 5 to 10 per cent.

The latest price issued on standard patent stove pipe and elbows is given below. Even at the prices mentioned it would seem to be very good buying, and all retailers should protect themselves as early as possible. It is estimated by some of the jobbers that there may be a shortage of Canada plate, and if such is the case, retailers can readily appreciate why they should protect themselves in ordering their supplies now.

Standard Patent—	Per 100 lengths
6 in.	$10.50
7 in.	11.25
Elbows—	**Per doz.**
Heavy—6 in.	$1.66
7 in.	1.86
8 in.	2.76
Light—6 in.	1.20
7 in.	1.35

Black wire cloth has also come in for an advance in price, and the ruling price to-day is $2 per 100 square feet.

WEEKLY PAINT MARKETS

(Continued from page 54.)

ronto for turpentine:—1-barrel lots, 87c; 2 to 4-barrel lots, 86c; and 5-gallon lots, 95c per Imperial gallon.

Paris Green, New Prices.—The new prices for the coming season for Paris green are out, and are given in panel on page 54. It will be noted that prices are very much higher than last year, which is due to the heavy increase in cost of raw material, particularly copper sulphate.

Gasoline Up Again.—The advance in gasoline and benzine predicted in Hardware and Metal is now in effect, quotations being now 2c higher. The demand for gasoline is steadily increasing, and the supply of crude oil appears to be stationary. All grades of Pennsylvania crude have advanced 5c per barrel, Pennsylvania crude being now quoted at $2.40. The gasoline market is very strong, and a further advance is probable. Gasoline is now being quoted locally at 30½c, and benzine at 30c per gallon.

White Lead Firm.—The market continues very firm, and prices are unchanged at $11.45 for pure white lead in ton lots. The pig lead market is very strong and higher, which, if continued, may result in another advance in white lead.

Castor Oil Advance.—Higher prices are being quoted for castor oil on account of the great shortage and difficulty in obtaining supplies from England. Castor oil is now being quoted at 44c per pound.

Glass.—New and lower discounts are being considered for both sheet and plate glass. Last week a change in discounts was announced, sheet glass being 30 and 10 per cent. and plate glass 35 per cent.; these are still in effect.

Mixed Paints.—As announced last week, some paint manufacturers advanced their prices on February 15, but others will wait until the date that was originally decided upon, March 1. As cost of raw materials continue to advance, it is highly probable that a further advance will be made in mixed paints before the season closes.

Putty.—Business is quiet, and although whiting advanced last week and linseed oil is still high, there is little possibility of any change in prices of putty in the meantime. The following prices are being quoted for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, in casks	$2.65
Bulk, in 100-lb. drums	2.85
Bulk, in 25-lb. drums	2.95
Bladders, in barrels	3.25

Pure putty, 70c per 100 lbs. advance.

STEEL TRUSS BARNS

The Metal Shingle and Siding Company, Ltd., Preston, Ont., recently issued catalogue No. 1916 on steel truss barns. The catalogue is an exceptionally attractive one, well illustrated, and contains a valuable fund of information on barn building and equipment. All the problems likely to be encountered in barn building are worked out in detail in the catalogue. In one section of the catalogue complete plans are shown for a barn, 36 x 70 feet. Capacity tables also shown in the catalogue tell how many animals can be housed in certain sized stables; how much hay and grain can be stored; how many windows and doors are needed; how much ventilation should be provided, etc. Copies of the catalogue will be supplied on request.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

81. **Handles.**—A Birmingham firm inquires for "D" shovel handles in three grades XX, X, and No. 1's; also ash stems for crutch handles in lengths from 28 inches to 36 inches. Prices should be c.i.f. Liverpool or Bristol.

103. **Steel Tubes.**—A Birmingham firm is open to purchase close-joint steel tubes for bedsteads or electric conduit work. Prices should include delivery Bristol or Liverpool, the former preferred. Samples may be inspected at the Department of Trade and Commerce, Ottawa.

104. **Graze Fuze.**—Canadian firms in a position to manufacture what is known as graze fuse, War Office number 100. finished or casting, are inquired for by a munitions contractor in Birmingham.

106. **Wire Nails and Wire.**—The foregoing firm is also open to purchase wire nails and galvanized wire 12 to 20 w.g. for the Canary Islands and the Spanish markets.

107. **Tinned Wire and Enamelware.**—A Birmingham firm is open to purchase tinned wire for mattresses and enamelled house utensils. Prices must include delivery Birmingham.

108. **Agency.**— An old - established South African commission house is prepared to take up Canadian agencies and requests full particulars for manufacturers prepared for export in shovels, picks, shelf hardware, locks, tools, dairy implements, cream separators, ploughs, rakes or any agricultural implement.

109. **Asbestos Fibre.**—A French firm is anxious to get in touch with companies operating asbestos mines in Canada. They state that the product which interests them is not the raw ore, but what is known as short fibre ("fibre courte") which could be shipped, in bags, directly to Marseilles. They also state, however, that if there exist in Canada manufacturers who triturate the stones and do carding they would also be interested in the long fibre for mattresses (fibre longue a matelas").

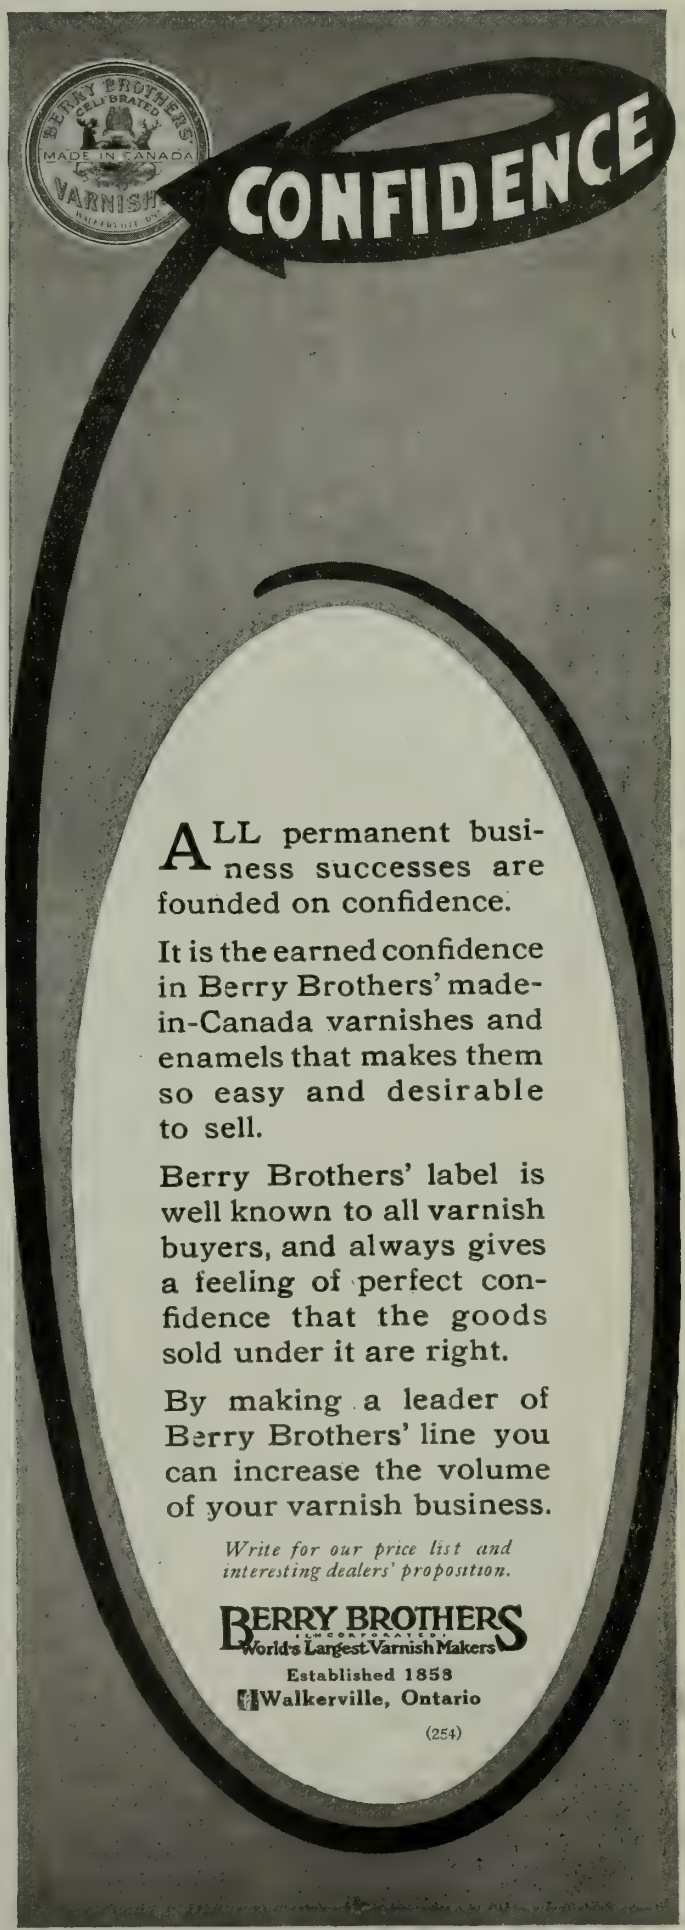
BADEN — TORONTO — MONTREAL



WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Feb. 25.—With the approach of the first of March when the advances on ready-mixed paints will be formally in effect with all local houses, there is evidence of other factors making for unsettlement in the situation in addition to the different selling policies as between different firms referred to last week. Not only have some manufacturers put their advances into effect earlier than others but some firms with late selling campaigns state that they will give all customers who have not yet been called upon by their travellers a chance to buy at the old figures in ordinary amounts. And now comes another development which indicates that the price changes will not be the same with each company even on the standard general colors. For instance while the general basis of the increase was 10 cents a gallon on general colors and 15 cents on whites, at least one firm will advance 20 cents on colors and 10 cents on whites, which will bring all colors and whites to the same basis It will thus be seen that the makers are not necessarily acting together as regards the details of the advances themselves any more than they did with regard to the date of their application.

Business throughout the week is reported as being altogether satisfactory in view of conditions in the building trades. Retailers have continued buying in very good quantities to get their purchases made prior to the advances. The situation as regards prices has continued strong in all departments and the conviction grows that still higher prices on mixed paints are inevitable unless there is some unforeseen reaction in the markets for materials.

Ready Mixed Paints.—In connection with the new quotations on ready mixed paints now going into effect, it is noted from the price list of one manufacturer that the increase on general colors is 10c and on whites 15c—pure, outside and inside whites now being 15c above ordinary colors. At the same time it is noted that flat white and varnish white are 35c above the general color basis, that window blind green is 40c above and that crimson and vermilion are 65c above the general level. This gives a fair indication of the basis of the adjustments being made but mention might be made again of the fact that one firm is making a flat price for colors and whites as compared with the 15 cents spread referred to.

Linseed Oil.—There is practically no change in the linseed oil situation and the range of prices continues as at last report, being from $1.00 and $1.03 for raw and boiled respectively to $1.03 and $1.06 for the two varieties mentioned. Usual allowance is made for quantities.

White Lead Very Strong.—Last week it was stated in connection with the white lead market that higher prices were warranted by the position of the pig market. This strong situation has been emphasised by another slight advance in pig by the American trust. Manufacturers state that the only reason for not making advances is that the price is already abnormally high and that there is little business passing at the present time.

Turpentine. — Nothing new can be said of the turpentine situation. The bulk of the business passing is on a basis of 80c to 82c a gallon although some quotations of 84c are heard. Usual allowances are made for quantities.

Paris Green—New Prices.

	C. P. Co.
600-lb Barrels	38¾
250-lb. kegs	39
100-lb. drums	40
50-lb. drums	40
25-lb. drums	40¼
1-lb. pack., 100 case	42¼
½-lb. pack., 100 case	44¼
1-lb. tins, 100 case	43¼

Prices f.o.b. Toronto, Hamilton and London.

Lubricating Oils.—Higher prices may be expected on lubricating oils. This will not come as the effect of the new tariff which only applies to fuel oil but will be the result of general developments in the market in the United States where the consumption appears to be surpassing the demand.

Gasoline Goes Up.—The big advance in gasoline predictions of which have been made for some weeks has finally taken place, the increase for the week being 2 cents a gallon. The new tariff is not a factor in this, the advance being the natural result of conditions in the States. New prices follow:

Gasoline, in barrels	31c
Gasoline, in drums	28½
Gasoline, tank wagon	28c

Benzine ½c lower.

Glass is Steady. — Despite reports from the west of reductions in glass the local situation remains firm and dealers say that any change should rather be in an upward direction. Cutting is believed to be the result of competition for the small business passing. Putty is steady at the prices which have been in effect for some time.

TORONTO

TORONTO, Ont., Feb. 24.—Spring bookings this year are reported to be well ahead of those for the corresponding period of 1915, which is a satisfactory feature. The contemplated advances in ready-mixed paints had no doubt something to do with this, but the prospect of a good demand no doubt influenced retailers to cover for their requirements early. Some manufacturers are now booking at the advanced prices, but others are still working on the old schedule until March 1, when the higher prices will go into effect. There is a possibility of a further advance in paints before the season closes owing to the continued advance in raw materials. White lead may also take another jump, as pig lead is higher than at the time when white lead was last advanced.

The anticipated advance in gasoline and benzine has materialized, and the market is very strong. Another change in discounts for both sheet and plate glass is under consideration, and may be announced shortly. Linseed oil is firmer, but prices are unchanged, and turpentine is quoted at the same level as last week.

Linseed Oil Firm.—Prices of linseed oil are unchanged this week, but the market is firmer. The flax market is firmer at Winnipeg, but there is little seed moving. Prices of Argentine seed are steady, and it is reported that some seed has been shipped to New York, but the shortage of tonnage, which is getting more acute, will likely restrict shipments of seed from the Argentine. Business locally continues light, and quotations are firm at the same range as last week. The following prices are being quoted in Toronto for linseed oil:

	Raw.	Boiled.
1 to 2 barrels	$1.02	$1.05 per gal.
3 to 5 barrels	1.01	1.04 per gal.
6 to 9 barrels	0.99	1.02 per gal.

Turpentine Easy.—The market is slightly easier, but quotations are unchanged. The market is quiet and unchanged at Savannah, and there is very little turpentine being exported. As the new turpentine will be coming in about the end of March, and no great demand springing up before then, it is probable that the market will remain steady for some time. Stocks of turpentine locally are light, and business is quiet. The following prices are being quoted in To-

The "C. P." on each can means—

More Sales—

Quicker Sales—

More Profits

Canada Paint

will be more than half sold to your customers and to practically every other paint user in Canada because our big and convincing consumer campaign will make them want the "C.P. Full Value" products.

All you need to do is to become a "full line" Canada Paint Agent and take advantage of *the complete selling service* that

Increases Profits

The first shot will soon be fired in our big campaign and far-sighted dealers who know a good thing when they see it are "linking up" their stores to get the full benefit. Now is the time for you to get our complete selling story.

Canada Paint Company, Limited

572 William Street, Montreal

Better heed the call to

"Get out and get under" the profits.

P&L Magazine Advertising Brings the Buyers to this Dealer's Store

AS if they literally stepped out of the pages of the magazines right into the store, is the experience of Mr. McMullin, Manager of the Paint Department of Asam Brothers, Philadelphia. Recently he was asked by a special writer of the "Painters' Magazine and Paint and Wall Paper Dealer": "Do you really believe that all the national advertising which has been done by the manufacturers has benefited either jobbers or retailers?" Mr. McMullin replied: "Well, I'll answer that question from my experience in this store. After the Saturday Evening Post or some other large circulating medium has run an advertisement on Pratt & Lambert Vitralite, for example, *we always* notice an increased demand — were we to market a brand of our own and try to market it as a substitute for a nationally advertised product, we would have a hard time."

Make your varnish selling problem easier by handling Pratt & Lambert Varnishes, the most widely advertised line of varnishes, proven by space used and money expended for magazine advertising.

4 Big Sellers

Ottawa quality and service appeals very strongly to practical painters everywhere.

It is a wonderful good paint, yet our spendid manufacturing facilities enable us to sell it at a very popular price.

See what a really good line it is by giving it a trial.

Write for proposition.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

71 ST. JAMES ST. MONTREAL

Aylmer Superior Lever Force Pump

Made in 1½ and 2-inch. Fitted for hand use only. Six, eight and ten-inch stroke.

This style of lever is superior to the ordinary style. Having longer stroke the power is greater, making it work easier. The handle being wood, they are not so liable to break in frosty weather

Base is adjustable, admitting of top being raised or lowered to any position desired.

A GOOD SELLER. IT PAYS TO HANDLE AYLMER PUMPS.

J. H. McCOMB, LIMITED Manufacturers of all kinds of Building Paper, Pitch and Coal Tar **MONTREAL**

In Demand

There is a good demand for a reliable, inexpensive Sprayer. Meet this demand and give your customers that come-back satisfaction. You can do this with the

EUREKA Glass Tank Sprayer

The receptacle of this Sprayer is an ordinary Crown Fruit Jar (one quart size), equipped with a heavy zinc cover. The pump cylinder is made from L. X. tin and is considerably longer than the ordinary glass tank Sprayer. The solution comes into contact with zinc and brass only, which will not easily corrode, thus giving longer service. This Sprayer is strongly made and attractively finished, and is excellent for spraying potatoes, small shrubs and all disinfectants in poultry houses and on live stock. Our prices are in your favor and our quality pleases customers. Let us send you our descriptive catalogue. Write—

The Easy Way to Display and Sell Wire Cloth

The awkwardness in unrolling wire cloth is done away with the instant you instal

The BOWSER Wire Cloth Display Rack

and besides, your stock is displayed in a very attractive and effective manner;—your store will have a neater and more up-to-date, business-like appearance which attracts the better class of trade.

Once known—always used.

It will pay you to get full particulars.

R. M. BOWSER & SON
Renfrew, Pa.

COSTS LESS

than aluminum and zinc wash boards, is just as good and is more serviceable.

The All-Canadian
All-Wooden
Wash Boards

are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped washboard sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.

The finest grained hardwood is used for rubbing surface.

Retails at 20c and leaves a BETTER profit.

Standard zinc, glass and enamel wash boards always on hand for prompt delivery, until notice to the contrary.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance): 2c per word first insertion, 1c per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

WANTED

WANTED AT ONCE—EXPERIENCED TINsmith. Apply with references and state salary. Patterson & Park, Dummer, Sask. (9)

WANTED—HARDWARE CLERKS 2 TO 4 years' experience; state references, also salary desired. Mills Hardware Co., Ltd., Hamilton. (9)

WANTED—A WESTERN HARDWAREMAN wants position in retail or wholesale store in the West. Experienced in managing a retail business. Best of references. Apply Box 257, Hardware & Metal, Toronto. (10)

HARDWARE DEALERS — SEND YOUR leaky automobile radiators to us. We specialize on radiator repairs; prompt service. Burrowes Mfg. Co., Toronto.

WANTED — POSITION AS HARDWARE clerk, with Western experience; steady employment. Can furnish best of references. Box 253, Hardware and Metal. (14)

IMPORTANT BRITISH FIRM MAKING cycles and motor cycles need first-class wholesale agent (or agents) for Canada. The goods are of first-class British workmanship and material, at competitive prices, and enjoy a high reputation in the Old Country. Address: Cycles, care of Hardware and Metal, University Avenue, Toronto. (10)

SALESMAN, CLEAN CUT, AMBITIOUS, with successful record of thirteen years' retail and wholesale hardware experience, at present employed as travelling salesman in British Columbia and Alberta, would like to make a change and represent some Eastern cutlery, paint, stove, specialty or hardware house in Western Canada. Apply Box 500, Hardware & Metal, 22 Royal Bank Bldg., Winnipeg. (10)

BRITISH HOUSE MAKING SYRINGES AND spraying machines for every possible use, need Canadian agents. The line is the most complete in the world, and include knapsack and ordinary spraying machines for fruit growers, lime-washing machines for farms, factories, etc. Disinfecting machines for all purposes. Anything in the way of spraying and washing machines made to suit the market. Agents must be aggressive and ready to work the line thoroughly. Write: Spraying Machines, Hardware and Metal, University Avenue, Toronto. (10)

FOR SALE

FOR SALE — HARDWARE BUSINESS IN southern Saskatchewan, on Soo line. Best wheat growing district. Town having five elevators and large trading territory. Present owner wishes to leave for family reasons. Apply to Box 248, Hardware and Metal. (12)

MISCELLANEOUS

FIRE INSURANCE. INSURE IN THE HARTford. Agencies everywhere in Canada.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

BARGAINS IN PAINTS—A LARGE STOCK of mixed paints, varnish stains, oil stains, colors in oil, enamels, etc., offered in lots to suit, at lower than manufacturers prices, on account of labels and tins slightly rusted and soiled. Fine for advertising job lots or bargains. List on application. J. R. Walker & Co., Montreal. (11)

HARDWARE WINDOW DRESSING—THIS IS the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

How Many of Your Customers Possess a

SWEEPER-VAC.

You can make many sales with little effort if you go about it right. The profit is well worth while. Why don't you try it out?

Arctic ARCTIC METAL **Metal**
FOR HIGH SPEED
Try It.
FOR HEAVY PRESSURE
Every Pound Guaranteed.
Tallman Brass & Metal Co.
HAMILTON, ONT.

PEERLESS ORNAMENTAL FENCING
It's Made of Heavy Open Hearth Steel Wire
with all the impurities burned out and all strength and toughness left in. Heavily galvanized. Every intersection is locked together with a Peerless clamp. Top and bottom wires of Peerless Poultry Fencing are extra heavy—extra strong. Consequently fewer posts are required. **Peerless** fencing can't sag—can't rust—can't get out of shape—can't help giving absolute satisfaction.
You can sell our fence with a clear conscience and make money, too.
Send for our dealer's proposition. It's attractive. It will interest you. It's well worth a stamp. Send today.

A STRAIGHT TALK FROM THE MANAGER

No. 34

Mr. Billings, of the Windsor Hardware Co., Windsor, Ont., is using Hardware and Metal in a way that makes his subscription pay him fabulous dividends.

While attending the Convention in Toronto this week, Mr. Billings told of the money he made by placing big orders for iron pipe when Hardware and Metal predicted an advance. "We had been in the habit of buying pipe just as we needed it," he explained, "but, when I began studying Hardware and Metal's market predictions, I saw where we were making a mistake. So when I read that an advance was expected in iron pipe, my partner and I immediately made up a specification and sent it to the manufacturers."

"Sure enough the price went up, just as Hardware and Metal had predicted and, if we hadn't bought just when we did, we would have been out a good many dollars."

"We have had a number of similar experiences, but our profits on that one deal will pay our subscription to Hardware and Metal for years to come."

Hardware and Metal is a business paper published by business men for business men, and its one object is to promote the prosperity of the Canadian hardware trade. As a hardwareman you should read every page of every issue, with the idea of making every page a profit-producer.

J. G. L.

"No more misses within shooting distance; no more long tramps after wounded animals. I can now go out with the satisfaction of knowing that if I hold the gun true I can kill any of our animals as far as I can see to hold a rifle. And I want to tell you another thing, you hold the gun better and shoot better when you have the confidence that the Ross inspires."

Ralph Edmunds,
Lawyer
Idaho Falls, Idaho.

This extract is only one among many. We are continually receiving letters from hunters and sportsmen from all parts of the world, who have no words too enthusiastic to picture their experiences with the Ross .280 Sporting Rifle.

The Ross .303 Models also offer special advantages. They are powerful, accurate and use the easily procurable .303 British Ammunition. Dealers find these rifles very popular and good sellers.

In placing your order for Ross Rifles do not forget the .22 Cadet Model. It is a well built, reliable and accurate rifle, and is in great demand for indoor target shooting.

THE above interior view is one of the 17 illustrations in four colors that appear in our new edition of "Homes, Healthful and Beautiful." Every dealer now handling Alabastine, or who will put in a stock this season, can have a free copy for use on his counter, to show customers that Alabastine is the simplest and most effective means of interior decoration. We have many other effective advertising helps for the wide-awake dealer. Get in line for your share of this desirable business. Alabastine has greatly improved quality—is supplied you on the same base as for 30 years—takes the place of paints and paper that are rising rapidly in cost. Dealers can insist on getting the full list price, 50 cents per 5 lb. package, making Alabastine a very profitable line to carry.

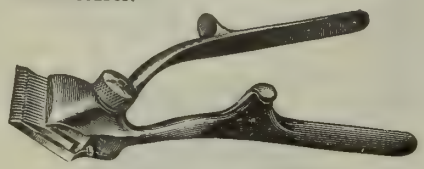
PRIEST'S HORSE and TOILET CLIPPERS

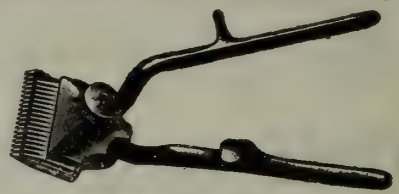
Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.

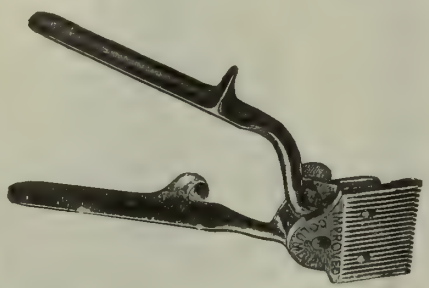


STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.



SPEED
Best low-priced Clipper made. Retailing at about $1.00.



IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.

If you are not familiar with these goods, send for samples and compare them with others.

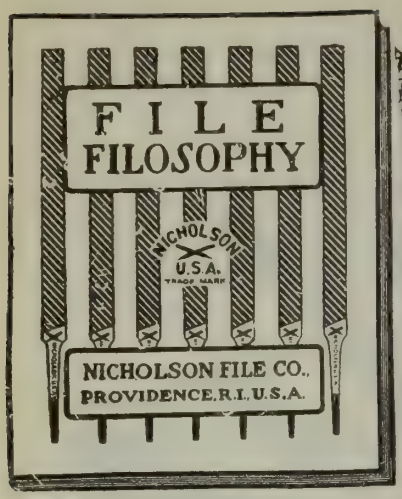
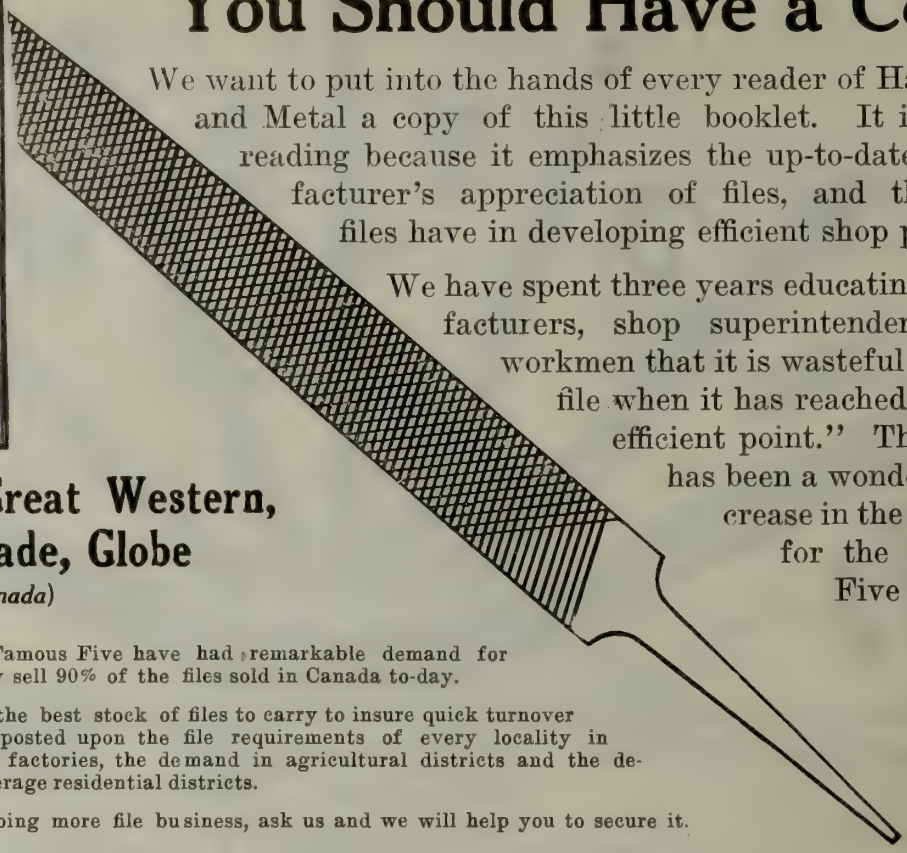
When writing advertisers please mention Hardware and Metal.



You Should Have a Copy

We want to put into the hands of every reader of Hardware and Metal a copy of this little booklet. It is worth reading because it emphasizes the up-to-date manufacturer's appreciation of files, and the part files have in developing efficient shop practice.

We have spent three years educating manufacturers, shop superintendents and workmen that it is wasteful to use a file when it has reached its "inefficient point." The result has been a wonderful increase in the demand for the Famous Five files.



Kearney & Foot, Great Western, American, Arcade, Globe

(Made in Canada)

Dealers who have been selling the Famous Five have had remarkable demand for their full lines, so much so that they sell 90% of the files sold in Canada to-day.

Write us. We will advise you of the best stock of files to carry to insure quick turnover from a small outlay. We are well posted upon the file requirements of every locality in Canada. We know the demands of factories, the demand in agricultural districts and the demand for files for domestic use in average residential districts.

If you think that you should be doing more file business, ask us and we will help you to secure it.

DO YOU KNOW WHAT

SIMMS SET IN RUBBER

STAMPED ON A BRUSH MEANS?

Are they just words of an indefinite meaning, or do they tell you that the invention of the "Set in Rubber" process was the greatest single event in the history of brushmaking?

That it gives to the public a brush that can be used in anything in which a brush should be used without in any way affecting the composition that holds the bristles in the ferrule?

That turpentine, grease, crude oil, linseed oil, paraffine, alcohol, amyl acetate, tar, carbon tetrachloride, hot water, kalsomine, paint removers, or anything else in which a brush is ever used, has no more effect on the setting than a dewdrop on a prairie fire?

THAT SIMMS ARE THE ONLY SET IN RUBBER BRUSHES

MADE IN CANADA?

That the methods used in the making of these brushes are the development of over thirty years of careful study and experiment in the setting of brushes in rubber?

That the machinery used represents the investment of many thousands of dollars?

That they are made in a modern reinforced concrete building, the finest building in the world, exclusively used in the making of brushes?

That the makers are specially trained in the art of making real brushes?

That the bristles in them are far superior to the "Just as Good" kind?

That they are absolutely guaranteed by a firm of international reputation, to hold the bristles in the ferrule for ever?

These and many others are the things that Simms' "Set in Rubber" brushes represent. Keep them in your mind when buying brushes; it's money in your pocket.

The Children of Purity

Rust-Resistance, Welding Quality, Enameling Property and Electrical Conductivity are the children of PURITY and SCIENTIFIC CARE in iron manufacture.

Chapter III

ENAMELING PROPERTY

A short time ago, a young business man happened to mention to his brother-in-law that he was going to purchase an enameled kitchen range.

This relative is a hustling Armco Iron representative, and one who has made a special study of enameling stock. He said at once, "Why don't you get a stove in which all the enamel work is on an Armco Iron base?"

"Why, I don't know," was the reply, "What's the odds to me? The iron is covered with enamel anyway."

"Because you'll get better and more lasting enamel," shot back the Armco man, "and because such a range is a quality proposition all the way through. You look it up now, and see if it isn't so."

The prospective purchaser is of an investigating turn of mind. A few days later he said to his brother-in-law—

"Say you were dead right about that enameling business! I never dreamed there was such a difference; but there is just as much as between wool and shoddy. I'm going to have an Armco Iron Stove."

Armco (American Ingot) Iron is far superior to ordinary material as an enameling base because of its evenness and the comparative absence of impurities both solid and gaseous. The tiny gas bubbles which form one of the most vicious impurities in modern steel are productive of numberless enameling culls, since the heat of the baking oven expands them and results in cracks, pinholes and fish-scales in the enameled surface.

The American Rolling Mill Co.

AMERICAN ARMCO INGOT IRON

The trade mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

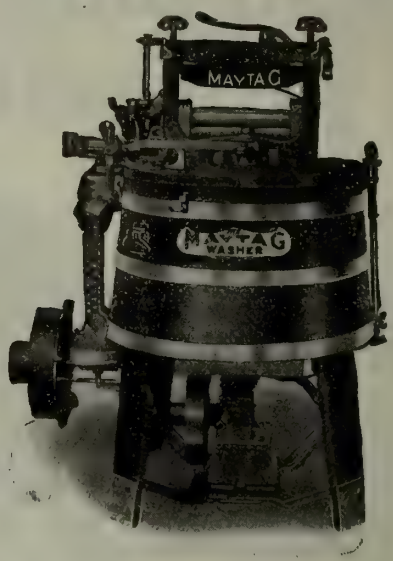
The Maytag Multi-Motor Washer

Announcement Extraordinary!



What the Maytag Multi-Motor Washer Will Do

It operates the washer and wringer. It will operate the sewing machine, churn, cream separator, food chopper—or any group of small machines—that do not require more than ½ H.P.

Now Ready! Something entirely new! Looks good—"makes good"—sells on sight! Every woman wants one! No competition! Only Multi-Motor Washer on the market!

The secret is in the light, powerful, compact little motor that is mounted right on the washer—burns gasoline, kerosene, gas or alcohol. Guaranteed for THREE YEARS.

The price fits the moderate purse, but puts a generous profit in your pocket. GET SOME OF THIS GOOD BUSINESS. Be the FIRST one to supply the demand in your town.

Now, listen! Some live, progressive dealer in your territory is going to make **BIG MONEY** handling the Maytag Multi-Motor Washer—and it might as well be **YOU.**

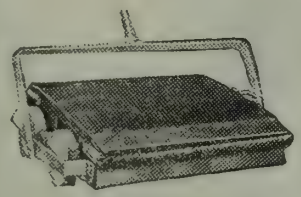
You positively **CAN** sell this washer and, if you don't, your competitor will—and pocket the profits. Remember, the proof of progressiveness is showing new things **FIRST.** This Washer is the same as our regular Power Washer we have sold for years, except that it has attached under the tub a ½ horse-power, 2-cycle air-cooled engine.

The Merchants Hardware Specialties, Ltd., at Calgary, sole agents for Alberta. If in business in Alberta, write them.

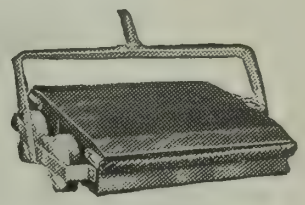
THE MAYTAG CO., LTD.

WINNIPEG, MAN.

A Real New Carpet Sweeper



The "MAISONETTE"

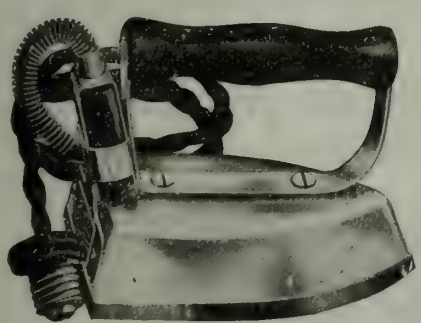


Just the thing for apartments or as an aid to the vacuum sweeper. Light in weight, easier to handle than other sweepers, strong, effective and durable. With such a sweeper and an O-Cedar Mop, many a family could save the cost of a maid.

O-Cedar Mops & Polish

Buy the genuine. Imitations are hard to sell. Both triangular and round, small and large sizes.

Colborne Electric Irons



Beautifully nickel-plated, improved contacts, weight 6½ lbs. It is the Iron to buy, because it is well made from high-grade materials, and will give your clients every satisfaction. Compared with the quality, the cost is low.

Manufactured by

GEO. WOSTENHOLM & SON

4618T 4618T

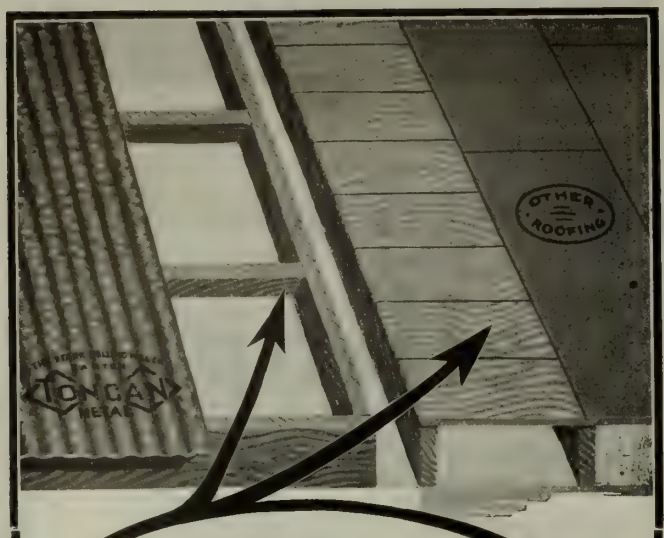
Stainless steel table cutlery requires no cleaning or rubbing. It positively does away with all bath brick and knife-cleaning boards.

Can be used on fruit or anything containing acids without fear of rust or terrible stains.

Has every feature desired in table cutlery. No rust or stains, will not become scratched or shabby, always holds its lustre. Can be sharpened on ordinary steel.

GET SAMPLES FROM YOUR JOBBER AT ONCE AND BE IN LINE

A. MACFARLANE & CO., Montreal, Canadian Representatives.



Note the difference

Here is a saving in material and labor cost which is usually overlooked.

Note that Corrugated Toncan Metal Roofing can be fastened directly to the rafters or purlins (wood or iron), while for most other roofings tight board sheathing must be laid over the rafters first; then the Roofing is applied to the sheathing.

This means a great saving to your customers in lumber, cost of superstructure and labor cost.

Besides

TONCAN METAL

ROOFING, SIDING AND ACCESSORIES

Resist Rust and Corrosion

Years of service have proved Toncan Metal's ability to withstand the most severe corrosive influences better than any other sheet metal made from iron ore.

And Toncan Metal's fire-proof, lightning-proof and weatherproof properties, together with its very moderate cost, means true economy to the user.

Can you see how you can gain friends and increased business by recommending Toncan Metal to your trade?

STANDARDIZATION

of Quality—Price—Policy

Solves Selling Problems of Merchants Who Handle BISSELL'S

Confidence in Bissell products, gained through 40 years of manufacturing integrity, has given the name such prestige in the minds of the purchasers that no argument can weaken it. Thus it is easier to sell BISSELL'S sweepers (regulation or vacuum) than not to sell them—price, or, rather, cheapness, is practically the only argument you can use in selling other cleaning devices against any BISSELL. And as the BISSELL line, with this *standardized quality,* in the long run pays the best profits, why waste this energy?

Which brings us to the subject of *price standardization,* an almost equally important question; allowing you, if you concentrate on the BISSELL line, to forget the general cleaning device market. Cut prices and vacuum "sales" need cause you no concern — you don't have to meet them. BISSELL'S are advertised in every national publication of importance with the retail prices always plainly stated—so Mrs. Jones *knows* that Mrs. Smith cannot buy a BISSELL to-morrow for less money, at the same store, than Mrs. Jones paid to-day.

This joint *standardization* of *quality* and *price* is *standard BISSELL* policy. A policy which *protects* the *public, protects* the *merchant,* and *protects BISSELL prestige.*

Important Notice

Write for a copy of our *Special Spring Offer Announcement,* now in force, and full details regarding our new *Household Vacuum Sweeper,* manufactured especially to retail at $5.00, and thus meet all low-priced competition. It sells at $5.50 in the extreme West, $7.00 and $7.50 in Canada.

HARDWARE AND METAL

Published Every Saturday Since 1888

Vol. 30 TORONTO, MARCH 4, 1916 No. 10

Advance in Oil Prices Likely to Continue

Diminishing Sources of Supply and Shutting Off of European Fields Make Oil Situation an Ever-Perplexing One—Great Need for Discovery of New Oil Fields in Canada.

WHAT is the situation with respect to oil is a question of vital importance to many people in the hardware business these days. It is also of more than passing interest to users of automobiles. Gasoline was quoted a year ago at 16 cents a gallon in drums. To-day it is quoted at 27½ cents in drums. In tank wagon lots of less than one hundred gallons the price a year ago was 15½ cents. To-day in tank wagon it is quoted at 27 cents. And so it goes.

And the end is not yet in sight, if the oil refiners can be considered as authority on the subject. With the increase in the price of gasoline and benzine there has been almost a corresponding increase in all other grades of oil. Machine oil and cylinder oil have advanced in price from 10 to 20 per cent. Paraffine wax has gone sky-rocketing with an advance from 60 to 100 per cent.

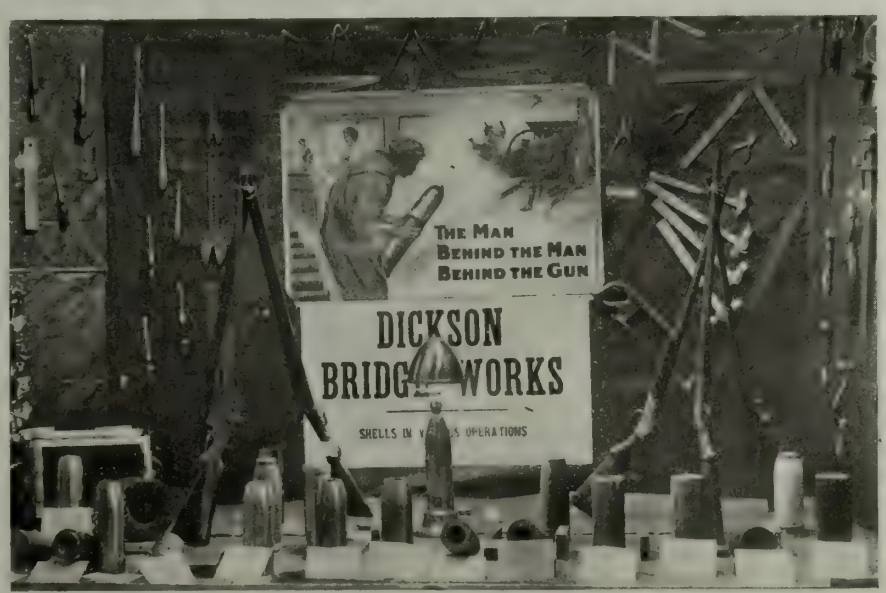
Supplies Shut Off

The situation which has brought about such a condition is somewhat complicated. First of all, there has been the shutting off of the European sources of supply for the crude oils, notably in Russia, Roumania and Sumatra. Secondly, there has been a great increase in the number of automobiles for war purposes and for pleasure and general utility. In America alone it is estimated the number of cars in use was increased last year by some 500,000. Thirdly, there has been a decrease in the available source of supply on this continent. Oklahoma oil fields, which a year ago were producing 300,000 barrels of high-grade crude oil, are to-day furnishing only 100,000 barrels a day. This has been the case of the Cushing well in Oklahoma. The Cushing is practically the only oil in Oklahoma capable of being manufactured into the high-grade fuel oils, for use in gasoline engines. Oil fields in Pennsylvania, Illinois and California also showed a decrease in their output some years ago. With the discovery of oil in Oklahoma, the situation was relieved greatly. Now that that source of supply has commenced to peter out, and with no new fields in sight, there are grave questionings as to where the soaring prices are likely to reach a limit.

Predict Higher Prices

Oil refiners can see no prospect of a diminution in price. They frankly state they look for them to continue their upward course. Not alone do they look for a steady increase in the price of gasoline, but also in almost all oils in which the hardware trade is interested. With the diminishing supply of the high-grade crude oils from which the benzine is taken, the by-products, such as machine oil, lubricating oil, and paraffine, logically must advance in price also.

Until the war ends and some relief is secured through the curtailment of oils for war purposes and the opening of former fields, there is every indication that almost every class of oil will continue to advance in price. Refiners are booking orders for



EIGHTEEN pounder high explosive shells in the various processes of manufacture are shown in the above window display, arranged by Frank Menzies for Owen & Birmingham, hardware merchants, Campbellford, Ont. The background of the window was used for displaying machinists' tools. The cards placed in front of the shells in various forms, explain each operation. The operations as shown in the display are as follows: The shell blanks arrive in a piece of solid forged steel, and are heated to a certain temperature, marked in the end of the blank. Then the steel is placed in a machine, and centred at each end. The next operation takes place on a machine and the metal is rough turned. The drill is then brought into operation and a hole 1¾" x 8½" deep is drilled. The shell is then taken to a lathe and the hole is finished to size. The shell is then nosed, and the fuse seat is cut. The outside and nose are then finished down to size, and an undercut and wave is cut in, to hold the copper bands. The base of the shell is then milled down, and a left hand thread run in. A plug is screwed in, riveted down, faced off, stamped with the number that was on the blank. The hole or inside is varnished and baked for 8 hours in an oven of 300 degrees of heat. The shells are then painted and packed in boxes similar to the one shown in the window. The big blank shown in the window is for a 6-inch shell. The display attracted considerable attention, owing to the great interest which is being exhibited at present in all matters pertaining to the war.

present delivery, and will not guarantee that they will remain long at the present figure. This, of course, does not warrant a panicky feeling among the retailers. It is well for them to have an eye on the situation and govern themselves accordingly.

Machine oil and lubricating oils have been in great demand through the extraordinary amount of machinery which is now in use. Machine plants are not only working to their capacity on munitions, but every serviceable bottom in the British navy has been oiled, put in ship-shape, and is ready for instant use. There has been no sparing of these essentials in making the navy fit. The great numbers of automobile trucks and other machinery used in the transportation service of the army has called for a big supply of these oils.

The Canadian Government tax on crude oil has called for a rather high grade in the past in order to allow its entrance free of duty. Crude oils of a Beaume gravity of 64½ per cent. were allowed to enter the country duty free. This Beaume gravity is equivalent to about .721 specific gravity to the gallon. Oils of a lower grade than .721 came under the head of dutiable goods, and importers were required to pay the war tax of 7½ per cent.

New Fields Needed

One of the great needs in the face of present conditions is the discovery of new oil fields. Calgary oil as yet has not relieved the situation to any considerable extent. Many people have some fine souvenirs in the shape of stock certificates as mementoes of their soaring visions of quick wealth. But they have been unburdened of these high hopes, and are just a little the wiser. Exploration will undoubtedly be carried on in parts of Canada where conditions seem to warrant the hope of finding oil. Into the far Peace River country the quest is undoubtedly being taken up at the present time. There are good prospects for the discovery of oil in the region of Alberta north and west of Edmonton. Geologists assert that the conditions and configuration of the country are such as to lend hope that oil might some day be discovered in this part of Canada. A discovery of oil in Canada would be a great boon to the waning oil supply and again revive the hopes of cheaper oil. Until the war ends or until new sources of supply are tapped there is little likelihood of a decrease in price in any class of oil. Even with the end of hostilities there is every probability that the increased use for the pursuits of peace will not tend to relieve the situation. The crying need is for new oil fields. Oil! Oil! Who would not give their kingdom for an oil well?

Why Hot Water Pipes Freeze First

Question Asked During Question-Box Discussion at Convention is Answered by an Authority—Hot Water Pipes Freeze Quicker Than Cold Water Pipes

At the convention of the Ontario Retail Hardware and Stove Dealers' Association held at Toronto last week, one of the questions placed in the question box was as follows:—Why do hot water pipes freeze quicker than cold water pipes? As no one present at the meeting seemed able to volunteer the information, Secretary Macpherson moved that the matter be referred to "Hardware and Metal" for a reply.

The information which follows has been supplied by R. O. Wynne-Roberts, an engineer who has had 32 years experience in water, sewerage, and sewage disposal works in various parts of the Empire and is a well known writer on all municipal engineering subjects. Mr. Wynne-Roberts is a member of the British, Canadian and American National Engineering societies. His reply follows:—

Why Does Water which has been Boiled Apparently Freeze Oftener than Water which has not been Boiled

"The above interesting question cannot be answered in a few words, but the following observations may help to explain the phenonenon. It will be necessary to use the terms "hot water" and "cold water" so as to avoid involved phrases, of course by "hot water" and "cold water" it is meant to convey the fact that the first has been boiled and the second has not. It is palpable that hot water must become cold before it will freeze.

All waters as they come from springs, rivers and lakes contain various gases and salts. Rain water contains the least and certain spring waters have the most of these gases and salts. When water is boiled the dissolved air and gases are driven out with the result that some of the salts become insoluble and deposit in the boilers, kettles, pipes, etc. in the form of lime. The most important gas is carbon dioxide which mixed with water converts it into carbonic acid. It is of course very dilute and therefore harmless. This gas is the same as that contained in mineral water such as in lemonade. The more carbon dioxide contained in water the more lime can be held in solution, causing the water to be "hard." Carbon dioxide is easily driven out by heat and as the lime then loses its support, it deposits in fine powder and cakes in the boilers, etc.

The freezing point of water is at 32° Fahr., but if it contains acid or salt, then the freezing point is lower. I have no data at present to show to what extent carbon dioxide and lime salts act in this way, but in the case of sea water which contains salt of another kind, the freezing point is more than three degrees lower than in that of fresh water. Consequently in hot water as the gases and salts have been removed from solution, its freezing point must be higher than that of cold water—if from the same source, hot water then freezes at 32° and cold water at a lower temperature, provided the local conditions are alike. Freezing takes place suddenly, as a small fraction of a degree is enough to change water into ice. The temperature of the air, round the pipes is often just sufficient to freeze the "hot water" but not low enough to freeze the "cold water". In any case the "hot water" freezes first.

There are however some conditions which influence the forces of nature. Still water may not freeze at several degrees below its freezing point. There are instances when quiet water has a temperature of ten degrees less than that needed for congelation, but any change or movement, or the intrusion of

APPRECIATES EFFICIENT SERVICE

232 *St. James St., Montreal, March* 1, 1916.

The Editor, Hardware and Metal,

Dear Sir,—Hardware and Metal, containing among other interesting news, a full report of the Hardware Convention, came to my desk early Saturday morning.

In my opinion it is a highly commendable exploit in journalism to give such a copious report of a meeting which only concluded on Thursday night in Toronto and was furnished to your subscribers in Montreal on Saturday, and I congratulate yourself and the staff upon its achievement.

"Hardware and Metal" is not dull, technical reading. There is Style and genuine Layout breathing all through it.

It is my pleasure to know a number of the gentlemen who attended the meeting. As "Punch" puts it: "I saw a great many names with whom I used to shake hands!"

Yours very truly,

WILLIAM H. EVANS.

a particle of deposit or ice will cause the water to instantly freeze. Cold water, ordinarily, is not in circulation in a building but hot water must circulate or something will occur, cold water is quite stagnant until the faucet is opened. Hot water is continuously in circulation even until it starts to freeze—excepting in branches where the hot water is stagnant. There is not much sediment in the cold water pipes, but there is some in hot water system and therefore it will be seen that the conditions are favorable for an earlier freezing in the case of the hot water than in that of the cold water.

Another condition is that the boiling of water tends to concentrate the salts and in time the boilers have to be blown out because the salts have become too concentrated. Such water will have a much lower freezing point, for example, if sea water is boiled until the salts are concentrated, the freezing point is lowered considerably. It will be interesting to have statistics as to the frequency of the freezing of hot water heating pipe, hot water supply pipes and cold water pipes. Concentration of salts cannot take place in a hot water system, but it is possible in the case of hot water heating plant.

It is well known that ice cream is prepared by packing ice and salt outside the vessel. The addition of salt to ice causes the ice to melt and the temperature of the water to drop 20° to 30° Fahr., thus confirming the statement that salts in solution change the freezing point of water.

If ice is put under pressure it will melt, consequently water put under great pressure has its freezing point lowered, but this does not affect hot and cold water pipes because the pressure in them is not great enough.

Acids and salts not only cause the water to freeze at a lower temperature, they also cause the water to boil at a different temperature.

The writer hopes the foregoing will be found interesting and clear, but any point, which may be obscure will be explained further.

In conclusion, the question of locating and insulating hot water pipes is worthy of consideration. The writer at one time resided in a house in the West, in which the hot water and cold water pipes were placed against the outside wall. The hot water pipes froze three times during one week, but the cold water pipes which were alongside did not freeze. The subject of locating and insulating pipes does not appear to have been fully considered.—R. O. Wynne-Roberts, Consulting Sanitary Engineer, 310 Temple Building, Toronto.

Tenders on Dwelling Warmly Discussed

Figures for Heating, Plumbing and Galvanized Iron Work From Members at Convention of Hardwaremen Gone Over Thoroughly—Discussion Voted a Big Success—Will Have Another One Next Year

ONE of the most interesting features at the convention of the Ontario Retail Hardware & Stove Dealers' Association—a report of which appeared in last week's issue of Hardware and Metal—was the discussion on the tenders submitted for the plumbing, heating, glass and rough hardware and galvanized iron work of a modern dwelling. The contract was awarded to James N. McGregor, of Oakville, his tender of $382.07 on the completed job being the lowest. Much good resulted to the members of the association. It was decided to hold a similar discussion next year. The discussion, together with the plans and specifications on which the tenders were based, appear in this issue. One of the features which developed was the lack of clearness in the specifications in certain particulars. The great need for closely examining the specifications of every job was one of the points emphasized by members at the convention. The specifications for the various classes of work follow:

A week prior to the convention dates, copies of the accompanying plans and specifications were sent out to members of the Ontario Retail Hardware and Stove Dealers' Association, requesting them to send in separate tenders on the lists of hardware, etc., as specified. The plans in reduced form, scale 1-16 in. to 1 ft., are shown in this issue. The plans and specifications are those of a dwelling house erected near Guelph, Ont. The work was done by H. Occomore, Guelph, Ont. Mr. Occomore, at the convention, gave the figures charged for the work. The specifications, tenders and discussions follow:

Hot Air Heating

Supply and install a No. 400 Sunshine (McClary) Furnace, or equal thereto, with all necessary tools for operating same. Chain for regulating to be placed in a convenient position on the ground floor.

All hot air registers will be side-walled and common oxidized finish, placed where shown by arrow marks on plan, and will be of the following sizes:

Ground Floor: Hall and Parlor, double 10 x 13 side-wall with 14" feed pipe.
Dining-Room and Kitchen, double 10 x 13 with 14" pipe.
First Floor: 2 Front Bedrooms, double 7 x 10 side-wall with 3⅜ x 12 risers and 9" feed pipe.
Back Bedroom and Bathroom, double 7 x 10 side-wall with 3⅜ x 12 riser and 9" feed pipe.

All hot air pipes to be made of good quality tin and covered with 10-lb. asbestos paper. All elbows, boots and boxes to have easy turns.

Cold air ducts to be made of 28-gauge galvanized iron and to be placed where marked and to be of the following sizes:

Front Hall, one 12 x 9 Floor Face and 14" Duct.
Dining-Room, one 12 x 15 Floor Face and 12" Duct.
Kitchen, one 12 x 15 Floor Face and 12" Duct.

Plumbing Specifications

Soil Pipe—Provide and run 4" med. soil pipe from point just outside, continuing straight up through roof, leaving necessary connection for bath, basin, closet and sink.

Bath—Provide and fit up 1—5' enamel bath, with 3" R.R., combination taps, ⅜ nickel-plated supplies, overflow and waste, and connect same with cold and hot water.

Basin—Provide and fit up 1—19 x 24 enamel basin with 4" apron, index taps, ⅜ nickel-plated supplies, 1-¼ Femco trap, and connect same with cold and hot water.

Closet—Provide and fit up 1—Low-down closet of an approved make, with post-hinge seat and connect with cold water.

Sink—Provide and fit up 1—18 x 30 roll-rim sink, with lever-handle, quick-opening taps, 1—½ Wolverine trap, and connect same with cold and hot water.

Boiler—Provide and fit up 1—30-gal. boiler in basement and connect to furnace.

Pump—Provide and fit up 1—Ideal double action oscillating force pump (iron cylinder) and connect same to cistern.

Galvanized Iron

Eavetrough—All eavetroughs shown on the plan to be 26-gauge, best quality of galvanized iron and 12" girth, well and strongly supported and to be made to slope, as shown. Verandahs, upper and lower roof of porch, and bay window to have 10" girth.

Down-Pipes—Put down-pipes where marked in the plan. The one for the house to be 4" and corrugated, 26-gauge galvanized iron. Verandahs to have 3-inch down-pipes, all well put up and secured to the walls and to stand out at least 1 inch from the wall. All down-pipes where required to have the necessary elbows, bends, etc., all down-pipes to run into tile drains prepared for them.

Valleys—Supply the carpenter with the valley iron required. These valleys to be 15 inches wide, to be well fitted at top and to be left perfectly watertight.

Flashing—Supply the carpenter with all the step-flashing, that he may require and, after the carpenter work is done, see that the same is all properly top flashed and made water tight.

Saddles—Put saddles to both chimneys and overflash same, leaving them perfectly water tight.

Bay Window Roof—Cover the bay window shown on the plan with 26-gauge galvanized iron, well and properly put on and overflashed and left perfectly water tight.

Glass

1 Bevelled plate, 26 x 52 with 1½ bevel.
2 d.d lights 24 x 30.
1 Shaving cabinet mirror, 12 x 24 with 1 inch bevel.
2 lights electric glazed 13 inches x 46 inches.

2 lights, D.D., 28″ x 18″.
3 lights, D.D., 28″ x 20″.
1 light, D.D., 24″ x 14″.
5 lights, D.D., 22″ x 28″.
2 lights, D.D., 18″ x 20″.
6 lights, D.D., 16″ x 20″.
3 lights, D.D., 10″ x 14″.
1 light, D.D., 40″ x 40″.
1 light, D.D., 40″ x 20″.
2 lights, D.D., 40″ x 38″.
2 lights, D.D., 40″ x 18″.
2 lights, D.D., 30″ x 30″.
2 lights, D.D., 30″ x 28″.
2 lights, D.D., 24″ x 24″.
2 lights, D.D., 22″ x 24″.
2 lights, D.D., 12″ x 38″.
2 lights, D.D., 12″ x 18″.
2 lights, D.D., 22″ x 38″.
2 lights, D.D., 22″ x 18″.

Rough Hardware

100 lbs. 12 oz. asbestos paper.
275 lbs. 2¾ wire nails.
110 lbs. 4-inch spikes.
60 lbs. 1½-inch shingle nails.
50 lbs. 2½-inch finishing nails..
20 lbs. 2-inch finishing nails.
10 lbs. 2-inch finishing nails.
50 lbs. 2½-inch flooring nails for oak floor on ground floor.
5 cones blue chalk.
1 small tin liquid glue, ¼ pt.
2 yds. sand paper. (B. & A.)
1 set sliding door hangers.
250 lbs. sash weights.
4 lbs. sash cord.
1½ squares Brantford roofing (2 ply), or equal.

Finishing Hardware

1 sliding door set, double, plain front, (brass plated.)
1 front door set, brass plated.
1 swing door set, brass plated.
15 inside door sets, medium quality (brass plated.)
3½ pair 3½ x 3½ L.P.B.T. brass-finished butts.
14 pair 3½ x 3½ L.P.B.T. steel-finish butts.
2 pair 5-inch T hinges (light.)
2 thumb latches No. 2.
14 pair 2½″ x 2½″ L.P. butts, steel (B.T.)
6 pair 3 x 3 L.P.B.T. butts (B.T.)
6 casement sash fasteners, brass plated.
14 cellar window bolts 2″.
11 sash locks, brass plated.
14 sash lifts, brass plated.
1 pair 2½″ narrow butts (nickel-plated.)
1 catch (nickel plated.)
4 pair 3-inch narrow butts (brass.)
2 Elbow catches (Japanned.)
2 door catches (or cupboard catches.)
24 shelf rests (for loose shelves.)
5 casement sash adjusters.
2 push plates for swing door (brass plated.)
16 door stops (or bumpers.)
4 doz. hat and coat hooks (jap. cast.)

Figures of Tenderers

James N. McGregor—Hot air, $128.71; plumbing, $148.90; glass, $38.10; rough hardware, $40.65; tin, $25.71.

Phillips & Co., Orillia—Hot air heating, $145; plumbing, $165; galvanized iron, $31. Total, $341.

Joseph Akitt, Creemore—Heating, plumbing, galvanized iron work, glass, rough and finished hardware, all complete, $468.72.

Taylor Bros., Almonte — Heating, $165; plumbing, $190. No price on galvanized iron work.

A. L. Shiells, Kincardine—Soil pipe and fittings, $14.06; bath and fittings, $25.21; basin and fittings, $13.61; closet and fittings, $15.50; sink and fittings, $12.60; boiler and stand fitted, $7.94; pipe, coil and heater fitted, $15.15; pump and fittings, $9.64; freight, $4.50; time installing, $33; profit, $30.24. Total for plumbing, $181.45.

A. M. Oldham, Weston—Rough hardware, $110.88; glass, $45.41; finishing hardware, $26.47.

Conn's Hardware, Tillsonburg—Plumbing, $170 diagram (this does not include lining of tank in attic, as there is no mention of same in specifications); galvanized iron, $60; hot air heating, $160.

S. B. McClung & Co., Trenton—Heating, $160; plumbing, $175; galvanized iron work, $50; glass $40; rough hardware, $40; finished hardware, $25. Total, $490.

W. A. Rankin, Ottawa—Rough and finishing hardware, $56.95.

D. Mistele, Rodney—Heating, $160; plumbing, $180; galvanizzed iron work, $52.50; glass, $40; rough hardware, $45; finished hardware, $25.

Windsor Hardware Co.—Hardware, $100; plumbing, $213.50; heating, $140; sheet metal, $38.

Price for Heating Contract

J. N. McGregor, of Oakville, was awarded the contract for the hot air heating at the price of $128.71. Mr. McGregor said his foreman had figured out the price, and that they would be glad to get all the jobs they can at that price.

W. R. Billing, of the Windsor Hardware Company, said he thought the difference in his price of some twelve dollars was due to a higher labor cost. Tinsmiths at Oakville get 35 cents an hour.

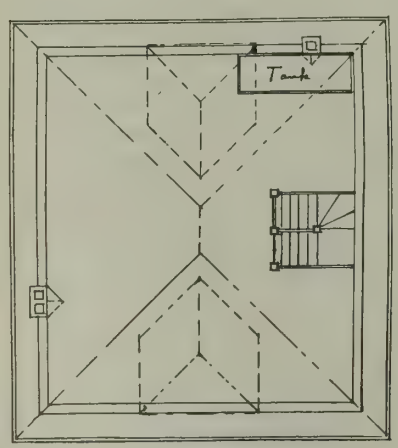
W. Phillips, of Orillia, said he figured the cost of labor at $20. His total cost was $103.94. He substituted a No. 10 Economy furnace. His registers cost $10.50; tin stock, $13.45; galvanized stock, $19.90; labor cost, $20. The price of his job was $145.

S. B. McClung figured the cost of materials and labor at $122, but the total for heating $160. He was not satisfied with the same amount of freight as Mr. Phillips.

President Conn estimated the cost of installing the furnace to be $17.50. "We were following specifications. We have no inspection."

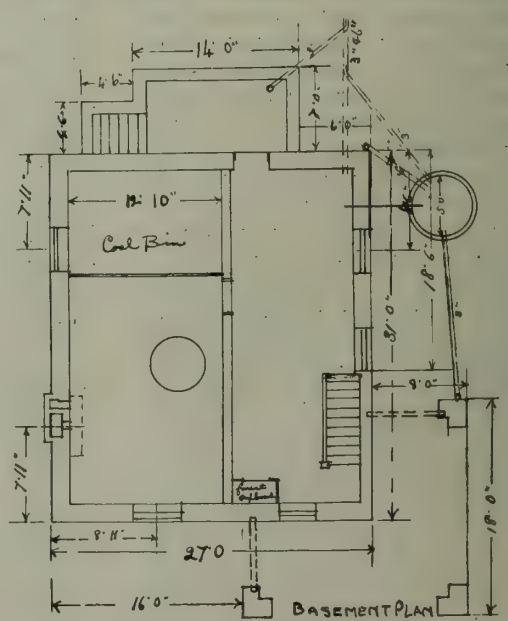
Original Price for Heating $145

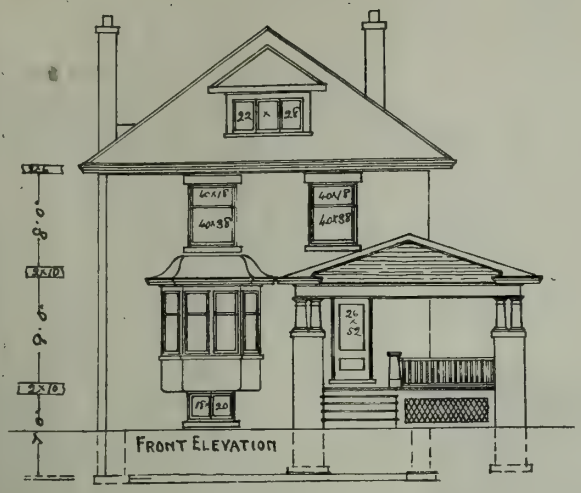
H. Occomore said the work on the house specified had been done by himself the latter part of last year. The job had been done for $145. "At the present time I would want an advance of 10 per cent., or $160. Tin stock and galvanized iron was figured at $25; labor cost, $20.

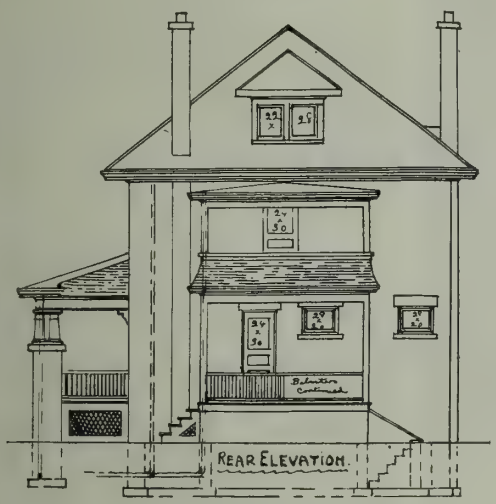


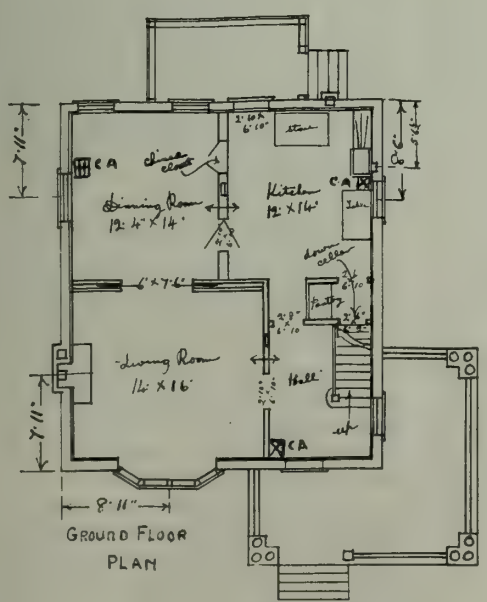
Attic & Roof Plan

Scale
1-16 inch=1 ft.

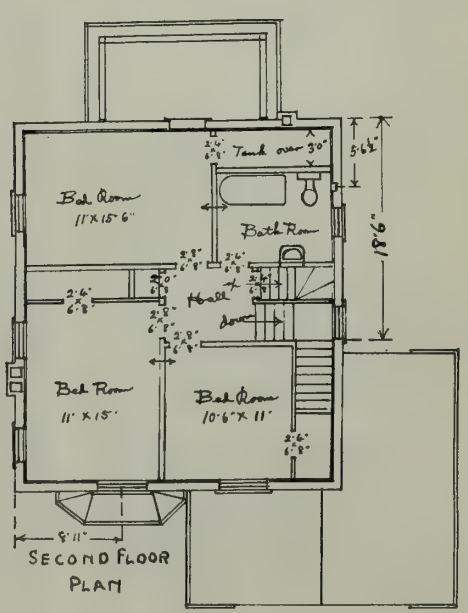








Scale
1-16 inch=1 ft.



There was about $22 profit on the job," said Mr. Occomore.

President Conn maintained that a man doing it for $128 could not possibly make a profit.

Mr. McGregor said he had the figures for his tinshop for the year, and that they show a profit. He did not know what this particular job would cost. His foreman had made up the figures.

H. Occomore said Mr. McGregor might lose on this particular job and make it up on others. The job was done all at the same time. A man would take three days to do the work.

Wide Range in Plumbing Figures

President Conn said there was such a wide range of figures for the plumbing that it seemed inconsistent. H. Occomore stated the job was let for $185. The prices ran from $148.90 to $213. Mr. McGregor, being the lowest tenderer, said the contract did not include the tank. President Conn said the contract specifications did not call for it. There was nothing to give the size of the tank.

H. Occomore said the tank was left out because it was not feasible to tender on it. It had been supplied by the firm installing the galvanized iron fittings.

President Conn was of the opinion that one cannot be too careful in reading over the specifications. His foreman had overlooked the tank altogether because of the fact that it was to be placed in the basement and not in the usual place in the bathroom or kitchen.

Specifications Incomplete

Mr. Baird said the specifications were very incomplete. It did not include boiler, pipe, and many other essentials. Mr. McGregor's price was a very good one.

Mr. McGregor said there was a great deal in the way you go at a job. Good buying and wise buying makes a difference.

President Conn's price was $135 for plumbing.

Jno. Caslor thought there was the prevailing opinion among those present at the meeting that Mr. McGregor was doing the job too cheaply. He was rated in Bradstreets at $30,000, said Mr. Caslor, and he did not get that rating through poor business methods.

President Conn thought the members were not inferring such a thing, but they would like to know why and how it is done.

H. Occomore said the house was built by a young man who requested that the work be done by Guelph concerns. The three plumbing concerns were called up and asked for a tender. It was built under the same conditions as in the city of Guelph.

Mr. McGregor said there was a great difference in the amount of net profit a man is satisfied with. A man can seldom get thirty-three and a third per cent. on such a job in competition with Toronto prices. Another delegate was satisfied with a net profit of 15 per cent.

Another member thought a man should have 35 per cent. profit. He was not getting enough, it seemed to him, when he was satisfied with only ten or fifteen per cent. President Conn stated some travelers had informed him that a certain amount should be allotted for overhead expenses, with a ten to fifteen per cent. net profit over and above that.

Mr. McGregor said a man might be making 10 or 15 per cent. on his turnover, but when the profit for the year is figured up it may be 30 or 40 per cent.

H. Occomore said a plumber of reputation always figured on a profit of 25 per cent., which included overhead expenses and all other expenses.

Roy McGregor mentioned a firm they had competed with in a plumbing tender who were satisfied with seven and one-half per cent. profit.

Great Variance on Metal Work

There were seven tenders for the metal work at $31, $60, $50, $52.50, $38, $58. "There is a great variance," said President Conn. H. Occomore said they got $93. They put in the tank and other extras. Excepting this work the actual price was $55. "This would be equivalent to $60 or $61 at the present time.

W. R. Billing, of the Windsor Hardware Company, gave a price of $38. Competition was very keen there, and they had to get in low at some place, said Mr. Billing. Competition on metal work is exceedingly keen in Windsor. The little fellows in his town do not have the overhead expenses. "I am not a practical man. I have been devoting my attention to the financial end. I cannot tell how much I have appreciated these meetings. They have done me more good than I can tell. I do not regret the trip down here because of the valuable information," said Mr. Billing.

"That is the kind of sentiment we like to hear," returned President Conn.

"The price I put on a job is altogether governed by circumstances. It depends on what kind of pay a prospective customer may be, or the amount of work in hand. These things may operate to cause me to put in a higher price," said President Conn.

H. Occomore said the dealers got together on eavetroughing pipe and were securing from 10 to 12 cents. "The iron is costing us even more than last fall. The man getting $30 or $40 was certainly losing money."

Prices Made Him Nervous

President Conn asked that Mr. Phillips, Toronto, express an opinion on it. Secretary Macpherson said Mr. Phillips was not in the room. "He is sitting outside the door. He says the prices are so close that they make him nervous, and he preferred to stay outside."

Prices on Glass

Prices for glass ranged $38.50, $45.41 and two for $40.00. The contract was awarded last fall for $41.00. There is a big difference in the market price of glass at the present time, said President Conn.

A. M. Oldham, of Weston, said his price was $45.41. He had figured on the present price, taking the old standard list as a basis with the addition of 10 per cent. Ten per cent. added to $41 would be about $45, the price to-day.

President Conn wanted to know what price the members are selling glass for. By a show of hands about twenty-five per cent. were getting an advance on the present list price, while about 50 per cent. of those present were getting the present list price for glass.

Secretary Macpherson moved that the contract be given to Mr. Mistele, since he was not present, and since he was one of the two who had a tie price.

The prices for the rough and finishing hardware were $66.36, $65.65, two at $65.00, $100, $70.00, $56.95. Mr. Occomore gave the prices of some of the locks which had been installed on the job. Mr. Rankin said according to these figures the job would cost about $75. Mr. Rankin said he would be glad to take all the contracts he could get at such a price.

The lowest tender for the completed work was $365.59 and the highest $468.72. "Who was right and who was wrong?" asked President Conn. The price for which the contract had been let last fall was $491, if the average of all the hardware tenders were added to the prices which Mr. Occomore had given for the plumbing, heating and galvanized iron work. This makes a difference between the lowest tender and the figures originally secured of approximately $125.

Plumbing As It Should Be Done

The specifications of Mr. McGregor's plumbing tender as he considered the work should be done, were read. President-elect Carter thought they were most complete and any man having a plumber in his employ capable of preparing such specifications should be congratulated. The price named in the tender was $216.25.

It was suggested that plans and specifications be prepared for discussion at next year's convention. The idea was concurred in by President-elect Carter. He thought the discussion this year was very valuable and highly instructive. The discussion was then closed.

Best Methods for Hot Air Heating Systems

H. Occomore Led Discussion at Convention of Ontario Retail Hardware and Stove Dealers' Association—Gives Results of His Experience —Thinks Most Money is in Making Over Plants

At the discussion on the "Proper System of Installation of Hot Air Heating Systems," which took place at the convention of the Ontario Retail Hardware & Stove Dealers' Association, one of the past presidents, H. Occomore of Guelph, a man who has had a wide experience in this class of work in his home city, gave some valuable pointers. The discussion took the form of questions to Mr. Occomore. The points brought out by his talk were most interesting to the members:

"I am of the opinion there is more money in making over heating systems rather than installing new plants and one gains thereby a reputation that is enduring.

"In the heating capacity of a furnace you must base it on the minimum capacity. Many pipes reduce the capacity. In every case I have found it safe to estimate the capacity of a furnace 5,000 feet larger than the required amount.

Warm Air Most Desirable

"First, we consider the man we are doing the work for—that is from an economic standpoint. A plant that will burn a moderate amount of fuel will give better satisfaction. There are two different ways of heating a house; with hot air and with warm air. A small furnace will give hot air and the large furnace warm air. It is warm air that is required in a house, not hot air. It is sufficient to have the downstairs heated with warm air and a good-sized well-hole to bring the upstairs to the proper temperature.

"The old-fashioned shutter registers I have no use for. The side-wall register has many advantages. But if it comes up to the baseboard you cannot get away from the draft. I have seen children with their legs cramped in school from them. (This applies where one pipe is made to serve two rooms on the same floor.) The nearer you can get to the floor level with air heating the better it is.

Objection to Cold Air in Kitchen

"The only objection I have to cold air in the kitchen is the carrying of odors to other parts of the house from the cooking. I always caution the housewife to put a piece of paper over the cold air while the vegetables are being cooked. The nearer you can get to 100 percentage cold air supply coming in as compared to the hot air being given off the better it is.

Cheap Jobs Do Not Pay

"The nearer you can get to the round pipe the better results you will get, because it is nearer the natural way that the heat leaves the furnace. To anyone putting in hot air furnaces, let me say, it does not pay to put in cheap jobs. More and more you will find the people recognizing this, and they will come to you if you do good work."

H. OCCOMORE

Guelph, Ont., who led the discussion on hot air heating systems

MERCHANTS AND COMPENSATION

Interesting Action at Montreal Under the Workmen's Act

The point as to whether grocers or other tradesmen who deliver merchandise to their own customers are responsible under the workmen's Compensation Act of Quebec Province, to their drivers in the event of the latter meeting with injury has been decided in the Superior Court at Montreal. The decision is that the act does not apply and that the injured's man recourse is under the common law against the author of the accident. S. Rosenbloom took action against M. Lavut and Sons, grocers, claiming an annuity of $312 as compensation for injuries received while driving the delivery outfit of the defendant when he had both legs fractured in a collision with an automobile. The contention of the plaintiff was that on the one hand the defendant company was in the "transportation" business in the delivery of their goods, such business being specifically describel in the Act, and further that even should this not be tenable it was submitted that at the time of the accident plaintiff was unloading the wagon and that this came within the expression "loading and unloading" as specified in the Act. The point of the court's decision was that the term "transportation" did not apply except to contractors who made hauling a part of their business and that unless "transportation" was the employer's business the point of "loading or unloading" did not apply either. Defendant has the right to take action under the common law.

OPPORTUNITIES FOR TRADE

With the close of the war Canadian manufacturers will have a wider vision of trade expansion. One of the things this war has done is to lift Canadians from their provincialism. Even now the Canadian Government is doing preliminary work in preparing the way for this trade expansion. H. R. MacMillan, special trade commissioner, under the date of January 3, made a report which has just been published by the Department of Trade and Commerce on the possibilities for trade in British East Africa. In this territory is included the East African Protectorate, Uganda and the Islands of Zanzibar and Pemba. "As yet, they are practically unreached by Canadian trade. They are sufficiently extensive, productive and populous to merit attention," said Mr. MacMillan.

The East African Protectorate, or British East Africa, has a population of over 4,000,000, of whom 25,000 are Asiatics, 5,000 Europeans and Eurasians and the remainder various tribes of natives. In the country all tropical crops thrive. It is considered to offer the greatest possibilities of any part of the East African Coast. Some of the things which will interest the hardware trade and which have been tried and grown there profitably are sisal hemp, manila hemp and oil seeds. Not one per cent. of this rich tropical area has been developed.

Uganda has a population of 2,909,000, of whom 3,600 are Asiatics, and 1,000 are Europeans. The port of Mombasa, the principal town of the protectorate and Uganda, is the commercial and shipping headquarters. The area of land suitable for agriculture and accessible to development is stated by the commissioner to be enormous. The area under cultivation by Europeans is expected to increase greatly after the war. The natives themselves are increasing the area under cultivation in order to increase their spending power. The implements in demand are hoes, mattocks, cheap ploughs and hatchets.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, MARCH 4, 1916 No. 10

LOWER COURT UPHELD

MANY merchants throughout the province and in other parts of the Dominion will be interested to know that sentence has been imposed upon the manager of Business Boosters, Limited, by the court to the extent of $200 fine or three months in jail. The business which they have been carrying on is declared in contravention of the Trading Stamp Act of Canada.

E. M. Trowern, secretary of the Dominion Board of the Retail Merchants' Association of Canada, in an interview with HARDWARE AND METAL, stated that the case as disposed of by the courts makes these contests illegal wherever carried on in the Dominion. It is the purpose of this association to notify the secretaries of the various provincial association that the business of this company has been declared illegal and requesting them to take action wherever the conditions warrant.

"Wherever merchants have these contests under way they should immediately terminate them," said Mr. Trowern. "If they continue them they hold themselves just as liable as the promoters. It is the purpose of our association to see that steps are taken to bring an action wherever the contests are still continued. Customers who accept the tickets, merchants who give them out and the promoting company are equally guilty before the law in having anything to do with these coupons.

"Merchants who have purchased prizes for these contests, or who have part payments made on them, should take what measures they deem best to protect their interest in the prizes," said Mr. Trowern.

PROFITS ON COPPER

COMMENTING upon the present high position of copper, the market for this metal having reached a high record level of forty years under the influence of war consumption, it may be stated that if the present prices prevail for the remainder of the year producers of the metal in the United States will receive nearly $200,000,000 more than they obtained for the same amount of metal during 1915.

Recently the position of copper has remained comparatively steady at about the top of the upward movement and the outlook is that there will be no reaction while the present consuming demand continues. On one hand there is a small chance that buyers have been holding up some supplies on speculation and on the other a possibility that after the lull which set in a week or so ago the upward movement may be continued. Generally speaking, however, experts are of the opinion that the present price fairly well represents the prevailing conditions and the immediate outlook. The consumption is at record proportions and promises to continue so, but efforts are being made to prevent anything like wild price inflation.

AN UNPRECEDENTED SITUATION

THE situation in the hardware market to-day is unprecedented, and it is almost impossible to form an opinion as to what is likely to develop with any degree of certainty.

The factors which are the chief cause of the present situation are increases in the costs of raw materials and in many instances the scarcity of same. The enormous demand for steel, due to the war, has created conditions in the trade never before experienced and there are no indications of any relief this year. Prices of finished and semi-finished steel have reached record levels and are still advancing. Although the mills are operating at 100 per cent. capacity and have been for some time, they are behind on deliveries and consequently customers are being seriously inconvenienced. Manufacturers of some lines of hardware are becoming alarmed because of their inability to secure supplies of raw materials on contracts placed months ago. If this continues, and it appears likely, production of many lines will be decreased and it will be more difficult than ever to make deliveries. The result will be a shortage of many lines of hardware and prices will consequently continue to advance. Deliveries from some manufacturers have been backward for some time and conditions in this regard are getting worse rather than better.

There is no reason to believe that prices have reached the highest level, although compared with

prices prevailing six months ago, they are abnormally high. Indications rather point to still higher prices and a continuation of present conditions until the end of the year.

With regard to imported lines the shortage of tonnage and consequent abnormally high freight rates have added considerably to the cost of the goods and shipments are often delayed, causing much inconvenience. The cordage industry has been affected on account of the freight situation and this is one reason for the extraordinary advance in prices of rope and kindred products. Many imported lines from England have, of course, been affected in cases where factories have been working almost entirely on equipment for the army and where a shortage of labor has curtailed production, such as in the cases of poultry netting and cutlery.

The extraordinary strength in the ingot metal markets has affected many lines of hardware. Copper has led the way and present high quotations constitute a record. Indications point to still higher prices, as the consumption appears to be getting ahead of production and the demand is increasing. The tin market is also strong and prices lately have been advancing. Spelter is higher than it has been for some time, due largely to the heavy demand from the brass mills. The high cost of this metal, however, is affecting the galvanized sheet trade and has considerably decreased the production of sheets. The position of lead has improved lately and prices have advanced with a strong market. A scarcity of spot antimony has developed recently and the market has been very firm. There is also a great scarcity of aluminum, with the result that the market has been very strong and high prices maintained. All these metals enter more or less into the manufacture of various lines of hardware, so it will readily be seen that the high costs of ingot metals have assisted considerably in creating the high price levels now prevailing.

NO TAX ON MAIL ORDER HOUSES

A FEW weeks ago it was announced in these columns that the Manitoba Legislature was figuring on legislation to tax mail order houses. As predicted at that time, there has been a great deal of opposition to this legislation. Not only farmers have opposed it, but the Provincial Executive of the Retail Merchants' Association, Saskatchewan Branch, met recently and among other things discussed this important problem. They decided to protest against it. They base their contention, according to a press report, on the ground that such a step means legislating against efficiency and might tend to make farmers and other buyers pay more for their necessities which they claim was not in accordance with the policy of the retailer.

HARDWARE AND METAL'S Western representative learned that the Provincial Treasurer has withdrawn the clause relating to the tax on mail order houses and that the bill for providing new revenue had been reprinted without it. This was done on account of the heavy pressure brought to bear on it from country districts. It is quite evident, therefore, that there will be no legislation in Manitoba taxing mail order houses at the present time.

ONE HUNDRED PER CENT. PROFIT!

AN official of one of the largest mail order stores in New York City recently testified under oath that the usual, customary and ordinary profits on a certain line of goods in most large stores was 100 per cent. Mail order houses cut prices on certain lines of goods apparently to give the public the impression that all its goods are sold on the same narrow margin of profit. They lose money on such transactions but they figure that they will in the long run attract new customers to their stores by indicating that all their goods are sold at similar advantageous prices. This, of course, they cannot do, for if they did, they soon would be compelled to go out of business.

We are told that bargain advertising is losing its force. It is certainly true that every once in a while the purchaser of a bargain article finds he has got caught and in the end pays more for the goods than he would had he bought a better quality at the regular price. The retail dealer who maintains quality throughout and who gets a fair price for his goods, is the one most likely to succeed in the end. Bargain hunting has become a fad with some, such people purchasing bargains only; but the good, average, substantial every-day trade at a fair profit is to-day actually MAKING more real merchants than price-cutting ever did or ever can do.

THE Saskatchewan Grain Growers' Association at their annual convention held recently at Saskatoon were informed by their president that no plans had been made for entering the retail field. They were considering the wholesale field, but to do that, it was necessary for them to have capital; and it was up to the farmers to supply it. When sufficient capital had been raised, they would select one or two distributing centres. Brandon and Winnipeg were both mentioned in this connection. The grain growers, should they enter the retail field, would find that more than capital is required to run a retail business, and that the retailer's path is not a bed of roses.

* * *

THERE is no profit in hardware retailing, no excuse for a retailer's existence, unless the selling end is vigorous. The energy which keeps the selling end vigorous in abnormal times is identically the same energy which keeps it vigorous in normal times—only it is in abnormal times that keeping up the stride is fraught with more discouragements.

WHAT OTHER PAPERS SAY

TRADE PAPERS INDISPENSABLE

From American Artisan

The annual address of President George W. Mason before the Convention of the Minnesota Retail Hardware Association, contains many valuable suggestions which may well be put into action by hardware dealers in other states as well as Minnesota.

One of these is with regard to the pricing of the merchandise on hand as well as that which is now beginning to arrive for the coming season. The necessity for keeping posted on the changes in the market is strongly pointed out by President Mason and for this purpose he urges a careful study of the trade papers in the following paragraph:

"Trade papers are a real necessity in the conduct of a hardware store. Without them dealers would suffer a loss each year which would be hard to estimate. If we are subscribers they render us great service by reason of the fact that they are able to get advance information of the condition of the iron and steel markets, as well as the trend of these markets. They in turn give us information through the columns of their publications, and if we would but take advantage of it there would be a great many dollars in our cash drawers at the end of the year which would not be there otherwise. The average dealer has no means of getting this information, and I consider a good trade paper a very essential part of every hardware store."

CUTLERY HAFTING MATERIAL

From the Ironmonger (England)

The United States is now the only source of supply of celluloid for the handles and scales of cutlery, and makers in that country are finding it increasingly difficult to meet the requirements of the British cutlery industry. Prices, however, have remained fairly steady during the war, the current quotations being only from 10 to 15 per cent. in excess of those of two years ago. For military cutlery extensive use is now made of vulcanized fibre, which is proving economical and serviceable for table knives, large pocket-knives and razors, and has supplemented the limited supplies of natural hafting material. The regulation army table knife is of the solid steel type, but it has not been possible to produce these goods in sufficient quantity to meet the war requirements. The imports of ivory during the last 18 months have been almost normal, and, although no auctions have been held, users have been able to get all they wanted from the importers. A brisk trade has sprung up in ivory cigar and cigarette tubes. These were formerly made in Austria, from ivory partly bought in Sheffield, but since the war broke out British firms have been supplying them at prices only slightly higher than before. Stag-horn cutters in Sheffield report a brisk demand from the cutlers in the United States.

NEW MARKET FOR ASBESTOS

From the Journal of Commerce, Montreal

The effects of the war are being revealed in some suprising situations. Before the outbreak of hostilities, over 50 per cent. of Canada's asbestos found its way into Germany and Austria, and as a result when war broke out the two big asbestos corporations doing business in Canada found matters almost at a standstill. In a surprisingly short time they found a new and larger market for their entire output with a result that the Asbestos Corporation of Canada has showed an increase of 12½ per cent. over its sales for 1914, while the Black Lake Asbestos Company turned a deficit of $32,000 in 1914 into a profit of $20,000 in 1915.

Previous to the war, asbestos was used very largely for industrial purposes, such as the making of shingles, fireproof boards, fireproof curtains for theatres, covering for machinery, etc., etc. To-day Canadian asbestos is finding a market in Great Britain where it is being used as packing in guns, for the covering of boilers and piping in the many new ships which are being built as well as for other purposes associated with war. After practically closing up at the outbreak of war, our asbestos companies are now working overtime in an effort to supply the demand, but so far have not been able to produce enough to overtake the market requirements from Great Britain. It is somewhat significant of German tactics that shortly after the outbreak of war, one of the companies operating in Canada was requested by its former German customer to ship large supplies to a firm in Holland. Needless to say, the order was not filled.

THE NEW TAXATION

From Canadian Machinery

One thing that strikes us relative to the proposed new taxation for war purposes is the absolute lack of detail concerning its operative machinery. It has all the appearance of being the result of a "throw of the dice," or at best the maiden effort of an amateur performer. Such opportunity to riddle the Budget proposal of responsible government with shot and shell rarely presents itself, and indications are everywhere abundant that party friend and party foe will be actively militant in assailing its rawness and lack of essential qualifications.

That the money has got to be raised by some legitimate means, nobody for a moment disputes, and that all concerned realize an obligation with respect to its raising, goes without saying. The proposals submitted define a wide diversity obligation, and presume to state the cash value of each, irrespective of right or reason. The very fact that the main feature of the 1916 Canadian Budget is taxation of profits of our commerce and industry, and, therefore in its every feature touching business men, should have been reason enough why some little attention and investigation should have been given the proposals so that presentation of them would have had at least a business air about it.

The whole scheme, it seems to us, is so supremely tentative, that any one of a series of developments may easily be anticipated when the House in Committee proceeds to its dissection, if enough body may meantime or then be found to it. Evidence is, however, accumulating to show that while the ideal aimed at will not fail of accomplishment, the concentration of productive effort will affect to a considerable extent the scope of the original propositions.

BIG BOOKINGS LAST WEEK

From American Metal Market

Expectations of further sharp advances in prices, as well as necessity, kept consumers of steel products last week actively in the market to cover requirements for deliveries as far forward as the steel mills could be induced to accept contracts. It is estimated that orders were booked calling for 650,000 tons of steel products, which at an estimated average price of $50 per ton means the expenditure of $32,500,000. Some large contracts were accepted for delivery over the first quarter of 1917, mainly in bars, plates and shapes, but producers of wire products and steel pipe are confining consumers to nearby delivery. The sale of 650,000 tons last week indicates that contracts booked were 50,000 tons in excess of the capacity of the mills for the same period. In addition contracts for fully 700,000 tons of various products offered were refused by the steel companies. In this connection it should be noted that some of the inquiries for billets and steel bars wanted in the manufactur of war munitions, offered by second hands, are not considered seriously by the mills unless the prospective buyer can show evidence of unimpeachable credit in Europe.

A NATION OF SHOP-KEEPERS

(From Ontario Bulletin of R.M.A.)

The sneer thrust at Great Britain of being a "Nation of Shop-Keepers" was the highest compliment that shopkeeping ever received, and because they have been honest shopkeepers is the reason why they hold the high place they do among the commercial nations of the earth. The spirit that guides wrong action in trade is the spirit of deception and evil. The spirit that guides right action in trade is the spirit of the concentrated force and desire of the best minds engaged in trade to hold fast in these modern days to the same principles upon which the "Nation of Shopkeepers" was founded. We have no apology to make for being shopkeepers, nor for the cause we represent. We have no secret pass words, no discrimination as to race, color or creed. All who desire what we desire can come under our banner. We have no age limit, no conditions, no restrictions, no compulsory methods; all that is required is the desire on the part of the retail merchant to line up with his fellow retailers, composed of all sections of the retail trade, and stand by the cause of honest and fair trading. If you are threatened by the imposition of unfair municipal by-laws or unfair legislative enactments, or by unfair commercial treatment in any manner whatsoever, we stand ready to defend you and to see that your rights are not interfered with or taken away from you.

A DISHONEST CLAIM

(From The Grocer, London, Eng.)

An imaginary writer in the "Co-operative News" makes the calm assertion that if "the waste and extravagance of the competitive system" were entirely swept away from our commercial life, and co-operation alone held the field, there would be no work for inspectors of foods and of weights and measures, and that the employment of police, clerks, lawyers (on both sides), the maintenance of courts and those who live by the courts, the making of laws to prevent fraud, and so on throughout the whole machinery of detection and prevention superimposed on the "unsightly, costly structure of competition," would be rendered unnecessary. If this is really an article of co-operative faith we should like to see it practised at "the stores." But it is not. In our Law reports to-day we give particulars of the prosecution of a co-operative society at Pontefract for having unjust scales in use. It was stated that the society sold 1,200 stones of flour per week, and that by their method of weighing flour each lot was half-an-ounce against the purchaser. A similar state of things was proved in regard to the sale of potatoes, and the society was fined in each of the two cases. Nor is this by any means an isolated case of a prosecution against co-operative societies, as our columns from time to time have shown. Yet the co-operative system of trading is held to be the paragon of virtues! "By their fruits ye shall know them."

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

IT would be difficult to imagine any kind of work-shop where material is more easily wasted than in a tin-shop. The reason for this is on account of the peculiar shape of some patterns.

At the same time many a man may easily save the price of his wages if he studies the various ways in which a pattern may be cut. Fig. 1 shows how a lot of waste is made. While Fig. 2 shows that by making a pattern in halves it is possible to get three half pieces out of the same size piece.

Fig. 3 shows plan, elevation and pattern of a cylinder, or round pipe along with two examples of how the seam can be made.

To develop a pattern for a round pipe, first draw an elevation A. Then draw plan B, and divide it into equal parts and even in number as shown 1, 2, 3, 4, 5, 4, 3, 2.

Now draw stretchout line a b and transfer measurements from plan. Next draw perpendicular lines from a5 and b5 equal to the length of pipe. Next connect these two perpendicular lines as shown by line cd.

This will complete pattern desired.

In Fig. 4 is shown a plan, elevation and pattern of a square pipe. It will be seen that the elevation is exactly the same as that shown in Fig. 3, but the plan shows that a square pipe is desired.

The elevation is first drawn, then plan as shown 1, 2, 3, 4, draw the stretchout line ab equal in length to the four sides as described, erect perpendicular lines and join by a line cd in the same manner as shown in Fig. 2.

Allowance for seams or locks must be made, and a number of examples are shown in this Fig.

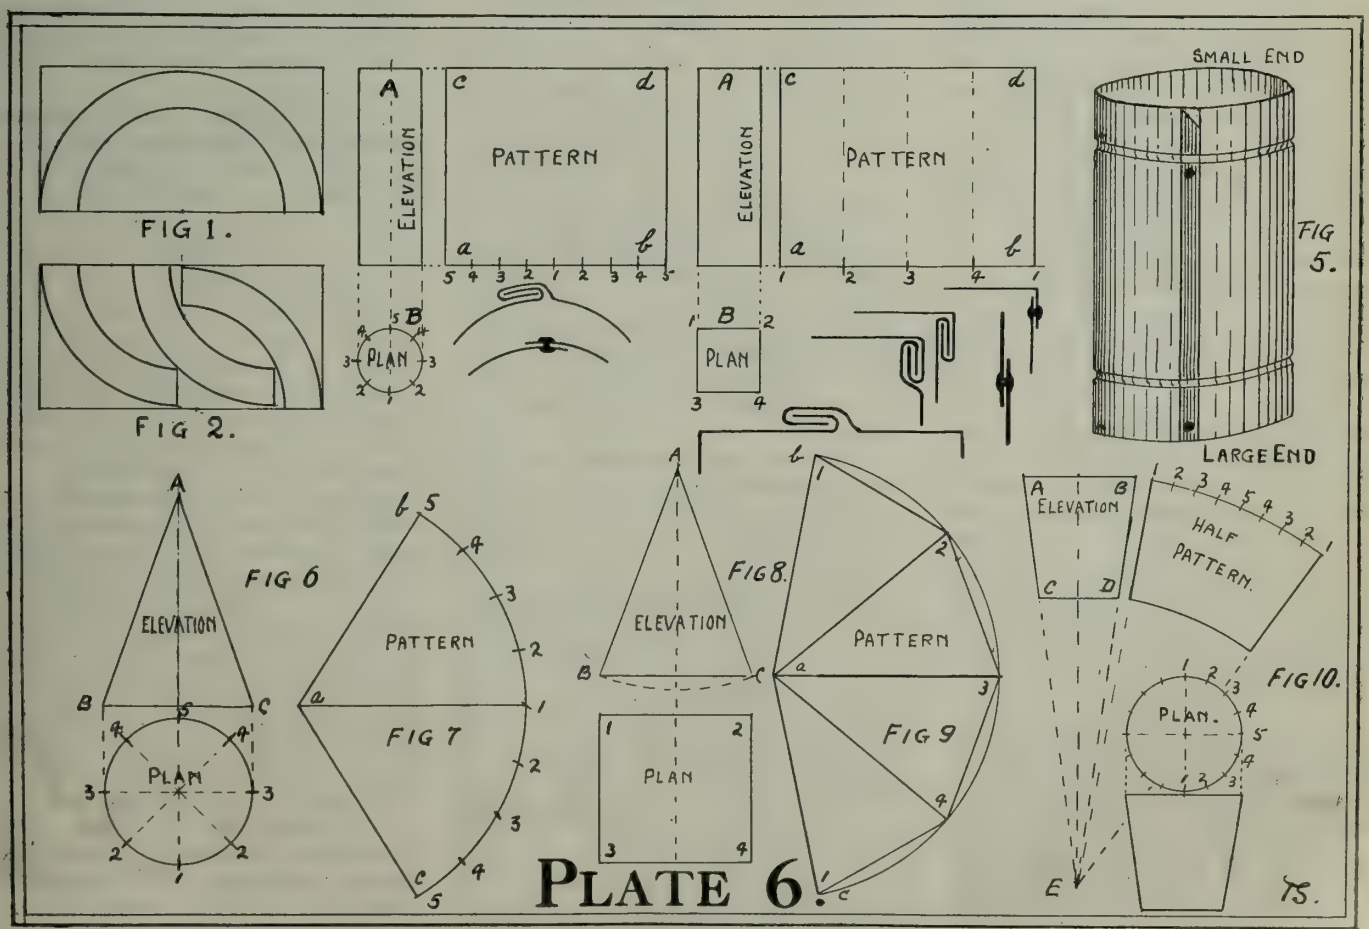
If a simple lap joint is to be made simply allow one width of the lap more than actual length of pattern. If a seam such as is shown it will be necessary to allow three times the width of the seam, this is done by adding twice the width at one edge and one width at the other edge. By examining the enlarged views of the seams this will be seen.

The perspective view of a stove pipe is shown in Fig. 5. It may seem a simple matter, but the writer has seen scores of hardwaremen who could not tell which was the small or large end of a pipe without trying the joints.

In making stove pipes it is a recognized practice to cut the corner off the small end, this is shown on the top of the seam.

Then again when the seam is riveted, the rivet in the small end is always below the bead and the rivet in the large

(Continued on page 47.)



EVENTS IN THE TRADE

To Build Garage

Davidson, Sask.—E. R. Mann & Son, hardware merchants have purchased additional property here and will build a garage 40 x 70 feet.

Oil Man Enlists

St. Thomas, Ont.—J. K. Tallen, for 15 years manager local branch Imperial Oil Co., has enlisted for active service with the 91st Battalion.

Becomes Paymaster

Saskatoon, Sask.—T. W. Faucett of the Faucett Hardware Co., has been appointed paymaster, and honorary-captain of the 203rd Battalion, which has already been given the name of No. 1 hard and has left for Winnipeg to take up his new duties. O. W. Faucett also of the Faucett Hardware Co. is enlisting in the same battalion. F. E. Faucett will carry on the business in the absence of his two brothers.

Ashdown Employees Enlist

Saskatoon, Sask.—The employees of the J. H. Ashdown Hardware Co. met recently at the home of Mr. and Mrs. H. E. Lawson, 516 Third Avenue, North, to honor W. Robinson, F. Woodman and H. Woods, who are leaving to join the 10th C. M. R. at Portage la Prairie, this making the total number on the honor roll of the firm's Saskatoon employees of eight men, one of whom died in action and another being invalided home.

Appointed Western Canada Representatives

The Stratford Manufacturing Company, Stratford, Ont., announce that in future they will be represented in the provinces of Saskatchewan and Alberta by Frederick Sara, 1309 12th St. West, Calgary. Mr. Sara will devote his whole time to the interests of the Stratford Manufacturing Company. H. S. Mussett Co., 202 Donalds Bldg., Winnipeg, are handling the line for the Province of Manitoba. The Stratford Manufacturing Company recently completed an addition to the plant 154 ft. x 40 ft.

Fire Losses

Merlin, Ont.—The hardware store of W. A. Barr, was detroyed by fire in a fire which destroyed two business blocks here.

An announcement appeared in last week's issue of Hardware and Metal regarding the disastrous fire at the seed warehouse of the Wm. Rennie Co., Toronto. The Company announced that although they have suffered a large loss in the fire, they have sufficient stocks at other warehouses to enable them to fill orders complete and take care of the coming season's trade.

Business Changes

Daysland, Alta.—Frank E. Block has purchased the hardware business of H. Keisel at Heisler, Alta., and will handle farm machinery in connection.

Uxbridge, Ont.—Reeve Rundle has purchased the hardware stock belonging to the estate of the late Robt. Carter.

Grimsby, Ont.—Messrs. Hess have sold out a large part of their interest in the Canadian Steel Specialty Co., and a new company will be formed, to be known as the Canadian Steel Specialty Company, Ltd., with a capital stock of $100,000. Harry Hess will remain with the new company as superintendent of works.

Hardwaremen Elected to Boards of Trade

The following hardware merchants have been elected to the councils of the Boards of Trade, in their respected towns:—R. Hawkins, Smiths Falls, Ont., J. A. Child, Cochrane, Ont.; J. W. Richardson, North Bay, Ont.; J. H. Fife, Ft. William, Ont.; Vic. Day, Reed Deer, Alta.; J. E. Robins, Watrous, Sask.; Malcolm Isbister, Saskatoon, Sask. has been elected President Board of Trade.

F. W. Koehler, Watrous, Sask., has been elected President Board of Trade.

C. F. R. Taylor, Carleton Place, Ont. has been elected Secretary Board of Trade.

W. F. Macpherson, Prescott, Ont., has been elected Secretary Board of Trade. O. B. Mueller, Mueller Mfg. Co., Sarnia, has been elected to the council of the Board of Trade.

Stony Plain, Alta., Feb. 14, 1916.
Hardware and Metal,
Toronto.

Dear Sirs,—

Enclosed find $2.00 *due you for paper for one year.*

We found it excellent the past year and would not be without it.

Yours truly,
H. Oppertshauser & Sons,

Obituary

Montreal, Que.—The death occurred here last week after a brief illness, of James Sclater, manager Asbestos Products Company.

Hamilton, Ont.—The death occurred here last week of John A. Spencer, who for many years was a superintendent with the D. Moore Co., and had been connected with the store business practically all his life.

Chatham, Ont.—John A. Morton, a pioneer business man of this city, died suddenly at his home, aged about seventy-eight. For more than forty years he conducted a hardware business, selling out about eight years ago. He is survived by his wife. When the Home Guard was organized last fall he was one of the first to join and was a regular attendant at drills.

Western Canada Notes

H. H. McBride, formerly traveler for the Imperial Varnish & Color Co., is now with the Geo. F. Campbell Co.

J. H. MacKenzie, Winnipeg traveler for G. F. Stephens & Co., who has been ill for several months, is recovering, but it will be several weeks before he is on the road again.

J. H. Ashdown, of J. H. Ashdown Hardware Co., Winnipeg, who recently underwent a serious operation at Rochester, Minn. is rapidly improving and is now at Washington, D.C.

The Geo. F. Campbell Co. have opened offices at 246 Somerset Block, Winnipeg, as manufacturing agents. Geo. F. Campbell has been in the West for a number of years, for the last five years being western manager of the Imperial Varnish & Color Co. He is handling cutlery and a large number of hardware specialties.

Among western hardwaremen who visited Winnipeg recently were, J. Heinricks, Aberdeen; M. Szutiak, Krydor; L. Arnut, Foxwarren; O. A. Sands, Yorkton; F. Field, Souris, Man.; M. Mellard, Melfort, Sask.; W. T. Collins, Lewvan; H. L. Smith, Liberty; A. Kilburn, Birnie; W. E. N. King, Neepawa, Man.; J. B. Stallwood, Mayfield; R. Dickey, Govan; J. B. Curran, Brandon, Man.; E. Worden, Weyburn, Sask.; A. P. McDonald, Carberry, Man.

Moved to New Office

Saskatoon, Sask.—The Imperial Oil Company moved into a new office on the second floor of the Connaught Block.

HARDWARE LETTER BOX

Clover Valve Grinding Compound

W. Hanna & Co., Port Carling, Ont.—Will you please tell us where in Canada, we can procure, "Clover Brand" valve grinding compound. It is manufactured by the Clover Mfg. Co., Norwalk, Conn.

Canadian Fairbanks-Morse Co., Montreal, Que., and Toronto, Ont. John Millen & Sons, Montreal, Que., and Toronto, Ont.—Editor.

Steel Window Sash and Frames

I. A. Blair, Ohotoko, Alta.—Kindly advise me where I can buy steel window sash and frames.

Metallic Roofing Co., Toronto, Ont., and Winnipeg, Man.; the Stanley Works, New Britain, Conn.; Steel & Radiation, Toronto, Ont.; The Pedlar People, Oshawa, Ont.; Winnipeg Ceiling & Roofing Co., Winnipeg, Man.; Winnipeg Steel Granary & Culvert Co., Winnipeg, Man.—Editor.

Strapped Ferrules

J. H. Still Mfg. Co., St. Thomas, Ont.—Will you let us know the names of firms manufacturing strapped ferrules?

Eley Bros., London, Eng.; H. Mueller Mfg. Co., Sarnia, Ont.; Williams Bros. & Piggott, Birmingham, Eng.; Canada Axe & Harvest Tool Co., Montreal, Que.—Editor.

Little Nell Parlor Cook Stoves

H. A. McLean, Midland, Ont.—Please give me the name of the firm making the Little Nell parlor cook stove. It is a baseburner with an oven at the back.

This stove was manufactured by Norton McKillop, of Kingston, Ont., but, they have been out of business about 15 or 20 years, so will not be able to give you supplies. McIntyre & Taylor of Toronto, state that they can most likely supply you with any parts required.—Editor.

Soft Linseed Oil Soap

H. J. Stafford, Montreal, Que.—I am particularly interested to know the names of manufacturers of soft linseed oil soap, and would be glad if you could give me this information.

Canada Paint Co., Limited, Montreal, Que.

Sherwin-Williams Co., Limited, Montreal, Que.

Canadian Economic Lubricant Co., Ltd., Montreal, Que.

Imperial Varnish & Color Co., Ltd., Toronto, Ont.

McColl Bros. & Co., Toronto, Ont.

Canadian Oil Companies, Limited, Toronto, Ont.—Ed.

Iron Fire Escapes

Enquirer, Dutton, Ont. (name on request).—Kindly advise us who makes iron fire escapes for public buildings.

Dennis Wire & Iron Works Co., Ltd., London, Ont.

Hutchinson & Sticht, Montreal, Que.

Robert Donaldson & Son, Montreal, Que.

The John Whitfield Co., Toronto, Ont.

Canadian Ornamental Iron Co., Ltd., Toronto, Ont.

Ontario May-Oatway Fire Alarms, Ltd., Toronto, Ont.

Montreal Architectural Iron Works, Montreal, Que.—Ed.

Personals

William Casey, who has held the position of assistant general manager, has been promoted to be manager of the Canadian Locomotive Co., Kingston, Ont.

Flight Lieut. Strachan Ince, of Toronto, and at one time with the Canadian Fairbanks-Morse Co., Front street, Toronto, has been awarded the D.S.O.

P. D. Ross, of Ottawa, has been appointed by the Provincial Hydro-Electric Commission as its representative on the Ottawa Hydro-Electric Commission.

E. Ronan has resigned from the position of manager of the small tool department of H. W. Petrie, Ltd., Toronto, and has enlisted for overseas service.

Industrial Notes

Sault Ste. Marie, Ont.—The Algoma Steel Corporation will erect a new building, 120 x 350 feet, at a cost of $50,000.

North Vancouver, B.C. — The Vancouver Creosoting Co. are building a factory here. Contracts have been awarded.

Guelph, Ont.—The Louden Machine Co. purposes making an extension to its factory. Estimated cost, $15,000 and $20,000.

Hamilton, Ont.—The United Gas and Fuel Co., have decided to build a $2,000,000 coke oven plant. Work will commence early in the spring.

Toronto, Ont.—White & Thomas, 212 Simcoe street, are building an addition to their plant for the manufacture of galvanized iron products.

Guelph, Ont.—A new foundry for the making of small castings will be erected in the spring. The building will be 100 x 50 feet, and under the management of Alex. Callander.

Weedon, Que.—The Weedon Chemical Co. is rebuilding its plant, which was recently destroyed by fire with a loss of $60,000. The company will also build another factory, for which it is now looking for a site.

Granby, Que.—The F. S. Carr Rubber Co. has taken over the old factory of the Walpole Rubber Co. here, and is installing a complete power system, including steam boilers, engines, generators, etc.

Fort Erie, Ont.—The directors of the International Safe Co. at a meeting held here recently decided to build an addition to the plant, which will double the capacity.

Brampton, Ont.—The council have under consideration a proposal to establish a rubber and tire factory here. Frank D. Law is interested in the scheme. A by-law will be voted on.

Windsor, Ont.—Plans are being prepared by A. R. Bartlet, of this town, for the erection of a factory at Windsor or Walkerville, Ont., for the Chalmers Motor Company, Detroit, Mich., to cost $65,000.

Chatham, Ont.—The American Well Works Co., of Aurora, Ill., have started putting the local plant into shape for manufacturing operations. The company make well drilling outfits and pumping machinery. F. J. Lukins will be manager of the Canadian branch.

Montreal, Que. — The following officers and directors were elected at the annual meeting of the Dominion Wire Rope Co.; F. W. Fairman, president; F. H. Hopkins, vice-president and general manager; J. C. Riddell, secretary-treasurer; George P. Butters, E. E. Fairman, and Dr. C. W. Colby.

St. Catharines, Ont. — An American firm has opened a plant here for reducing potash from wood ashes. It is altogether likely that in a short while the feldspar from the Frontenac mines, near Kingston, will be shipped to the plant for the same purpose.

New Incorporations

The Toronto Builders Supplies, Ltd., has been incorporated at Toronto with a capital of $50,000 to manufacture builders' supplies of all kinds. Head office to be at Toronto.

The Overland Tire & Rubber Co., has been incorporated at Ottawa with a capital of $50,000 to carry on the business of manufacturers of rubber and rubber tires. Head office to be situated at Montreal.

The Dominion Dustless Sweepers, Ltd. has been incorporated at Ottawa, with a capital of $200,000 to manufacture street cleaning machinery, at Peterborough, Ont.

The Salt & Potash Co., of Canada, Ltd., has been incorporated at Ottawa, with a capital of $500,000 to manufacture, methylate, chemicals, spirits, explosives and other products. Head office to be situated at Toronto, Ont.

The Utility Electric Manufacturing Co., has been incorporated at Toronto with a capital of $40,000 to manufacture electric ranges, stoves, heaters, and any or all kinds of electrical goods or appliances. Head offices to be situated at London, Ont.

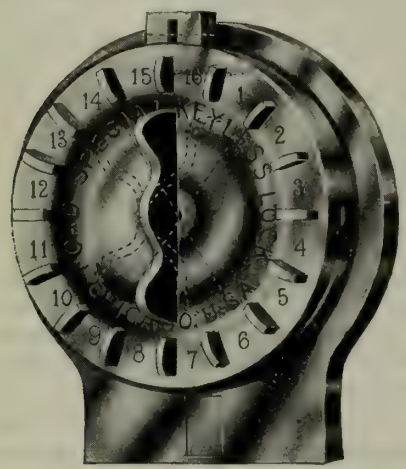
NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

KEYLESS LOCK FOR FORD CARS

The Lockwell Company, Great Northern Building, Chicago, have produced an additional keyless lock which is made especially for Ford automobiles. Their first creation was the larger switch-lock, named the Chicago Keyless Lock, a keyless device for locking the ignition system on all automobiles, and is substituted for the original switch on all cars.

By reference to the illustration the dimensions of the present Ford switch-head is correctly depicted. The lock is attached to this switch-head, and the wiring is in no way disturbed. It can be placed in operating position by any person in three minutes. There are sixteen buttons in the combination, any number of which may be selected for your individual combination—2 or 3 or



Keyless Lock for Ford Cars

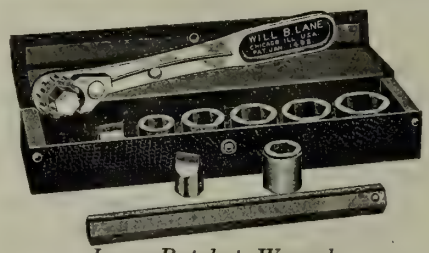
4, etc.,—and these must be pressed simultaneously to open. There are over 20,000 workable combinations, which the makers state can be changed at will in five minutes. One motion locks, one motion unlocks, gloves on or off, and operated at night without aid of a light. When locked switch lever cannot be removed. It is made of steel, nickel-plated and highly polished.

LANE RATCHET WRENCH

Will B. Lane, 180 North Dearborn street, Chicago, Ill., is marketing a new ratchet wrench consisting of a long ratchet handle, cold broached, case hardened steel socket and screw driver bits, and is constructed so that nuts located close to walls can be turned easily.

The makers state that the sockets are warranted not to break or split and will fit three standards and automobile nuts.

A special Ford set includes six sockets, which it is claimed will fit every



Lane Ratchet Wrench

nut and bolt head on that make of car, including cylinder head.

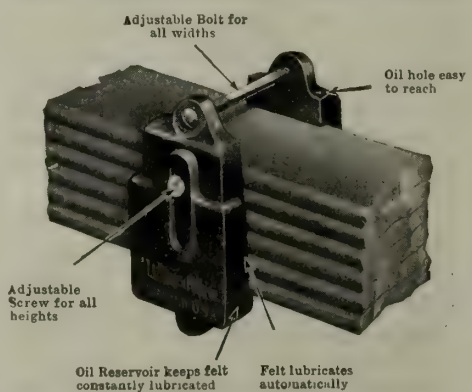
The standard set does not include the extension bar but has seven sockets which fit three standards of nuts.

NEW PLASTERING TROWELS

The Nicholls Mfg. Co., Ottumwa, Iowa, are putting on the market a copper plated plaster trowel. This, the makers claim, is a great improvement over the old style polished steel trowels, as it will not rust and lasts longer. It is made out of the finest quality crucible spring steel, blades and mountings full polished and copper plated. Ten and twelve rivets, stiff mountings, flexible blades, straight edges, perfect hang, light weight.

ADJUSTABLE SPRING LUBRICATOR

The Lazarus Manufacturing Company, of 762 Euclid avenue, Cleveland, Ohio, have added to their line of auto accessories, an adjustable spring lubricator, so designed and constructed as to fit all sized springs from a Ford to the largest truck.



Adjustable Spring Lubricator

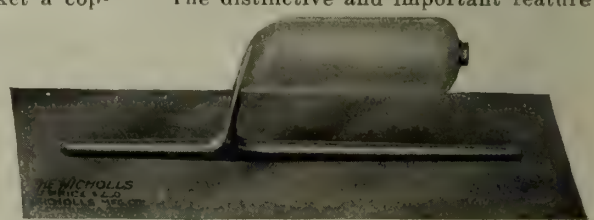
The lubricators are very easily attached and by capillary attraction the oil is automatically fed between the leaves thereby stopping squeaks, keeping out rust, minimizing breakage and adding to the riding comfort of the car.

Literature on this spring lubricator states that there is as much friction between the leaves of the springs when in motion as in any other part of the car. Spring manufacturers claim that rust is the cause of 80 per cent. of spring breakage and this itself is caused by lack of lubrication.

NEW SPOKE SHAVES

Two new numbers have been added to the line of Spoke Shaves manufactured by the Stanley Rule & Level Co., New Britain, Conn.

The distinctive and important feature



Nicholls Copper-plated Trowel

is the method of adjustment. This, it is said, can be done quickly and accurately both endwise and sidewise by means of

New Stanley Spoke Shave

the two adjusting screws which engage the slots near the top of the cutter.

The lever cap fastens the cutter in such a manner as to bring an even pressure on the cutting edge.

The cutters are made from a high grade of steel, well tempered and sharpened and ready for use.

The handles are japanned and through each a hole is made to enable the owner to hang the tool up out of the way.

Made in two styles—No. 151, which has raised handles, and No. 152, having straight handles.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

The upward tendency in hardware prices continues and a number of important price changes have taken place during the past week. Although quotations on many lines are now abnormally high, indications point to further advances in the near future. Among the many lines which have advanced in price during the past week are: chisels, bench axes, valves, bolts, nuts, tacks, capped goods, lawn mowers, lumbering tools, cross-cut saws, carpenters' tools white lead in oil, solder, charcoal, tin and terne plates, boiler rivets, hoop steel, sheet lead, builders' hardware, chain, tin and galvanized ware, shot. The new prices on ready-mixed paints announced some time ago to go into effect March 1, are now in effect. Linseed oil is weaker and has declined at Montreal. Turpentine has declined sharply. White lead in oil has advanced 25 cents per 100 lbs. Lead, zinc and all chemicals used in paint-making are high in price and very firm. Paris green prices announced for 1916 are more than double the prices quoted last year. The recent heavy snowfalls and cold snaps have created activity in winter hardware lines. The outlook for spring trade is very satisfactory at present. A number of price changes are predicted for the near future.

MONTREAL

MONTREAL, March 3.—Following in the wake of the recent strong upward movement of metals which only served to detract attention from, rather than interfere with the steady advance of steel, there are adjustments of prices to higher levels in the hardware trade on as broad a scale as has been indicated at any time since the outbreak of the war. Not only have there been such advances in such lines as boiler plates, black sheets, tin plates, lead sheets and indications of others to affect other similar products but in the higher manufactures including general shelf goods there have been many changes. Where the upward movement will end is as much a question as it has been for weeks; in fact there are reports that certain American steel authorities figure that a few months hence may prove that at the present time the movement in that metal has only commenced. Buying is on a fairly heavy scale but is not so active as some weeks ago and there are indications that the trade may have protected itself fairly well—and even though there may be many further advances this does not off-set the fact that levels are already very abnormal.

Business has continued brisk with a general movement of staple lines to country districts but as yet small improvement in the city. It is also noted that such spring lines as carpet sweepers, vacuum cleaners, mops and polishes are in improved demand and this is taken as a forecast of good business in such goods. Delivery of heavy goods is also good considering that the reduced freight rates do not go into effect for another month.

During the week there have been advances on: solder, charcoal, tin and terne plates, black sheets, corrugated galvanized sheets, boiler and tank plates and heads, hoop steel, sheet lead, Babbitt metal, bolts and nuts, boiler rivets, builders hardware, fancy butts, Disston's tools and some Stanley lines, plumbers supplies, brass and nickel safety chain, Jenkins valves, copper wire, Stillson wrenches, soldering irons, copper oilers, cross cut saws, lamp black, Paris green, tin and galvanized ware, shot and some old materials.

Predictions are for general advances along the lines mentioned with special emphasis on, screws, pipe, galvanized sheets, sheet and bar copper, lumbering tools, shovels and scoops and lead pipe.

Tin a New Leader. — Following the sensational pace set by copper in the metal markets, tin has taken the leadership and the local quotation has been moved up 2½ cents. On this advance the market is very strong and further increases in the prices may be looked for immediately. The movement is a reflection of the New York market, where sensational gains have been recorded since last report. During the early part of the week New York developed an extraordinary situation in spot and the market was bid up as high as 50 cents, which covered a gain of about 8 cents on the week. This quotation, however, may be regarded as nominal in character and probably by the time this reaches the reader there will have been a reaction to levels more in accordance with the local quotations. New York appears to have been demoralised by a temporary shortage of supplies due to non arrival of expected shipments; in one day an advance of 5 cents a pound was indicated by the bids recorded. Montreal quotation: 49½-50c—strong.

Copper steady and firm.—The quotations of a week ago, which indicated that copper had reached a high record for forty years, as the result of buying for munitions purposes, are well maintained in this market and the indications are that the level will at least be held for a considerable period with possibilities of further advances. New York is holding up to last week's quotations largely on the influence of London. Output of refiners continues close to record-breaking limits but there are difficulties in making deliveries to the coast. Spain has appeared in America as a heavy buyer which is a new and unusual development for strength. Montreal quotation: 32-32½—very strong.

Lead is Going Up.—Although there is no general advance on the quotations for lead established on a new basis last week, the situation is very strong and it is predicted that there will be further advances in the near future. New York reports the same quotation by the American Trust as last given, but, largely under the influence of London, there has been an advance of 10 to 20 cents on holdings by second hands—a movement which the Trust will probably follow shortly, as it is evident that they are not looking for business at the official quotations. Montreal quotation: 8¾-9 cents—strong and advancing.

Spelter is Steady.—Spelter is steady in the local market on the recent advances. Outside influences are not significant. New York at the latter part of last week felt a weaker state but this passed with renewed advances in London. An unsetteld condition in the market is that certain producers are holding for higher prices in view of the export market because they have old freight contracts under which they can transport at lower cost than the transient business is handled. Montreal quotation: 24-24½—steady.

Antimony Easier.—There is an easier feeling in the local antimony situation and the nominal quotation has been brought down to a working basis of 48 cents, a decline of 2 cents. The change locally comes without any evidence of outside influence. New York showing no change, but it has been recognised that for some time there has been a considerable spread in the price levels, and it

may be that an effort is being made to encourage business. Montreal quotation: 48 cents.

Aluminum is Puzzling.—In view of the fact that during the week there has been a considerable advance on Aluminum in New York, it is difficult to explain an easier tone in the local situation, as indicated by a decline of 2 cents in the quotation of some local houses. However, the conditions in this market are so mixed that it is difficult to find a basis. For some time the market level has been so high that ordinary consumption has fallen to a low level and it may be that dealers with stocks on hand are endeavoring to encourage business, despite the general trend of the outside markets. Another theory which might be advanced is that the lower quotation applies to remelt or alloy as against virgin. Market nominal.

Sheet zinc is steady at last quotations of: casks 31 cents and part casks 31½ cents.

Solder Again Scores.—On the head of an advance of 1 cent on solder prices reported last week, there has been a further gain of the same amount this week. The sensational advance of tin is undoubtedly the responsible influence and, unless there is a reaction with regard to this metal, still higher prices are to be expected. At the same time it is somewhat difficult to trace the action of the market owing to the different brands and qualities being manufactured to suit the condition. The Montreal market is about as follows: Commercial half-and-half 29c-30c — Strictly half-and-half, 31c-32c.

Iron and Steel Situation.—The situation as regards manufactured steel and iron is still without important change and certainly without improvement. In fact there are reports from Pittsburg to the effect that the developments of the next few months may make the present situation, abnormal as present prices are, comparatively easy; some predictions are that heavy rolled steel products will be at 5 cents the pound—Pittsburg—by the end of the year. This would appear to be taking an extreme view of the situation. However, with the difficulties in securing supplies continuing much as they have been for several months, and no improvement in the outlook, and with deliveries exhausting the existing stocks, there would appear to be every reason to look for advances from time to time. Locally the buying is in fairly heavy volume but not so excited as some weeks ago and there are indications that the trade has protected itself fairly well against the continued elevation of prices. American reports this week indicate that further advances are to be looked for on tin plates, galvanized sheets, boiler plates and black sheets with other products in a very strong position.

Charcoal Tin Plates.—Following the advance of charcoal tin plates of 25c recorded last week, there has been a further increase of 50 cents. These increases come following important changes in the American situation to which reference has been made. New quotations for Allaway's Best, standard quality, are:

IC 14 x 20 base	$6 75
IX 14 r 20 base	7 75
IXX 14 x 20 base	8 75

Charcoal Terne Plates.—For the same reasons as above there has been another advance made on charcoal terne plates, the third in as many weeks. On the Dean or 1 G grade—I C, 20 by 28, 112 sheets, 216 lbs., the quotation remains at $10.00 while the 200 lbs. has been advanced to $10.25—an increase of 50 cents.

Black Sheets Again Higher.—Another advance on several weights of black sheets is recorded. The 10 to 16 gauges —inclusive—are affected to the extent of 50 cents, while the other gauges remain as before. The change is due to the fact that it is practically impossible to get any assurance of deliveries of the gauges referred to. Quotations are now as follows:

10 gauge, $4.00; 12 gauge, $4.10; 14 gauge, $3.85; 16 gauge, $3.90; 18-20 gauge $3.55; 22-24 gauge $3.65; 26 gauge, $3.70 28 gauge, $3.80.

NEW DISCOUNTS IN BOLTS

Applying to standard lists

Carriage Bolts ($1.00 list), ¾-in. dia. and smaller	52½%
Carriage Bolts ($1.00 list, 7-16-in. dia. and larger	37½%
Machine Bolts, ¾-in. dia. and smaller	52½%
Machine Bolts, 7-16-in. dia. and larger	42½%
Sleigh Shoe Bolts, ⅝-in. dia. and smaller	42½%
Sleigh Shoe Bolts, 7-16-in. dia. and larger	37½%
Coach and Lag Screws	60 %
Skein Bolts	55 %
Square Head Blank Bolts	42½%
Bolt Ends	42½%
Plow Bolts	42½%
Elevator Bolts	42½%
Fancy Head Bolts	35 %
Shaft Bolts ($3.00 list)	35 %
Step Bolts, large head ($3.00 list)	35 %
Whiffletree Bolt	35 %
Nuts, square	$2.75 off list
Nuts, hexagon	$3.00 off list

Terms: 2% off 30 days from date of shipment.

F.O.B. Toronto, London, Hamilton, Montreal.

Corrugated Sheets Are Up.—Important advances have taken place on corrugated galvanized sheets. In view of the fact that other quotations for sheets are given by the 100 pounds, Hardware and Metal has adjusted prices to this basis. New quotations follow:

18 gauge, 100 lb. $5.80; 20 gauge, 100 lb. $5.80; 22 gauge, 100 lb. $600; 24 gauge, 100 lb. $6.15; 26 gauge, 100 lb. $6.85; 28 gauge, 100 lb. $7.15.

Galvanized Sheets As reported last week, the situation in galvanized sheets is very firm and advances are being predicted. Increases in price would appear to be logical in view of the recent strong upward tendency of black sheets and plates.

Boiler Plates Go Up.—An important advance on boiler plates has been made this week, the upward movement being the result of the general tendency of the market for steel and iron products. On plates the advance is 55 cents; and on heads and tank plates 45 cents. New quotations follow:

Plates, ¼ to ½ inch, per 100 lbs.	$3 40
Heads, per 100 lbs.	3 65
Tank plates, 3-16 inch	3 70

Hoop Steel Advances.—A big increase on the prices for hoop steel has gone into effect. This is the result of the general movement of manufacturers steel. The present advance is about 50 cents on the many different sizes.

Other Metal Products.—Products of such metals as copper and lead are also very active as the result of the developments in the metal markets. Material advances are to be looked for following the increases which have recently been registered. A number of lines are already affected.

Sheet Copper to Go Up.—With copper in the highest position it has occupied in over 40 years, products of that metal are beginning to feel the further effect of the recent advances. Copper is sheets and bars, while generally on the basis last reported, shows evidence of immediate change and there will probable be higher quotations before next report.

Brass Products Also.—Brass products also are very firm and higher prices, although not so definitely forecast as in the case of copper, are the logical development of the present metal situation.

Sheet Lead is Higher.—On the strength of the advances in the lead market there are increased quotations by 1 cent on lead sheets and lead wool. New quotations follow:

Lead Wool, 12c lb.; Sheets, 3 lbs. sq. ft. $11.00; Sheets, 3½ lbs. sq. ft., $10.30; Sheets, 4 to 6 lbs. sq. ft.. $10.75; Cut sheets, ½c per lb. extra; Cut sheets to size, 1c per lb. extra.

Situation in Nails.—The situation in nails is firm on the basis of $3.20 for wire. Last week there was a temporary advance made by some wholesalers on the strength of an increase by one manufacturer but there was a quick reaction. However, a further general increase would not be surprising in view of the position of wire.

Babbitt is Higher.—An increase of 2 cents on babbitt is indicated by the new quotations issued by Thomas Robertson & Co., Ltd., as follows: No. 1, 32c; No. 2, 23c; No. 3, 19c.

In Hardware Lines. — While there have been the important advances in manufactured metals referred to, the more general effect of the increases this week is in connection with highly manufactured hardware lines. Important readjustments on tools, bolts, builders hardware, plumbers' supplies, etc., affect a large number of departments, many of the changes being too great in detail for extended description in this report.

The New Discounts on Bolts.—A further general increase on the bolt list is indicated in the announcement of new discounts. The change is about 5 per cent. and is the direct result of the rising cost of the raw materials. New

discounts are shown in current quotations.

Boiler Rivets Up.—A new quotation for boiler rivets covers a considerable increase. The base price is now $4.25 as compared with $4.50 formerly. Extras continue as before.

Builders Hardware Higher.—A new list on builders hardware has been issued by the Peterborough company covering practically all lines—steel, brass and bronze. The advance appears to be about 5 per cent. on the majority of lines with some slightly higher. This is the third change in an upward direction announced on the company's lines since the outbreak of the war, and, with the recent developments in the markets for raw materials, it is doubtful if further advances will be long deferred.

Fancy Butts Go High. — On fancy brass butts, including narrow, broad, desk and shutter, an advance of about 25 per cent. has been advanced. This makes a total increase of about 100 per cent since the outbreak of the war.

Disston's Tools Up. — General advances on the Disston line of tools have gone into effect. These include all kinds of towels, squares saws, levels, etc. The advance on the average is from 5 per cent. to 7½ per cent. and there are reports on good authority that it will not be long until there are further changes in an upward direction.

Stanley Goods Also.—Certain of the lines of the Stanley Rule and Level Company, particularly rules and braces, have been advanced on an average of about 5 per cent.

Plumbers' Supplies are Higher.—There is an advance on many lines of plumbers' supplies, particularly those manufactured of brass or bronze. Brass stop cocks and impress bibs are now on a basis of 70 per cent. discount.

Brass Safety Chain Advanced.—Higher prices are being quoted for both brass and nickel safety chain. The new figures are as follows:

Doz. yards	Brass	Nickel
3-0	90c	1 00
2-0	96c	1 10
1-0	1 15	1 30
1-0	1 45	

Jenkins Valves. — Valves with other manufactures of brass and bronze are being subjected to advances with the rising cost of raw materials. A quotation of 30 per cent. off as compared with 37½ per cent. formerly is given by a local wholesale house.

Copper Wire Goes Up.—With the rise in the copper market there has been an important advance on copper wire. Generally speaking the discount off is now 10 per cent. as compared with a former discount of 25 per cent.

Stillson Wrenches — In connection with the advances on wrenches a local wholesaler quotes a discount of 70 per cent. up to 24 inch and 67½ per cent. on larger sizes.

Soldering Irons Higher.—Another advance on soldering coppers is reported. A wholesale quotation follows: 1 pound 63c pair 1½ pound 90c pair; 2 pound, $1.15 pair; 2¼ pound, $1.40 pair; 3 pound, $1.65 pair; 4 pound, $2.25 pair; 5 pound, $2.80, pair; 6 pound, $3.30 pair; 8 pound, $4.50 pair.

Copper Oilers Higher.—Copper oilers are advancing with the general upward movement of copper products and a material increase on the old quotations is announced by wholesalers.

Lumbering Tools.—Lumbering tools are going to be affected in the general advance of metal products and wholesalers forecast a considerable increase on the quotations for Pink's goods.

Cross Cut Saws.—With the upward movement of steel of high quality there has been a material increase in the manufacture of cross cut saws and one manufacturer has advanced his prices about 10 per cent; others are expected to follow.

Shovels and Scoops. — With the increased cost of manufacture of steel goods there are indications that higher prices will shortly be put into effect on shovels, scoops and spades. Reports on good authority predict this as inevitable.

Screws. — Despite the very material advances which have been made on the prices of screws there are reports in the local wholesale trade that these are to be followed by others in the near future.

Lamplack Much Higher.—There have been several increases in the cost of lampblack recently and these have affected quotations to the trade. One house quoted as follows for Germantown:

¼ lb. packets	28c
½ lb. packets	18c
1 lb. packets	14½c
Assorted	18c

Paris Green Prices.—New prices for Paris Green are now in effect and the advance is a startling one. The basis is over 200 per cent. higher than the first quotations of a year ago. Quotations for Canada Paint Company were given last week in the Paint Market of Hardware and Metal. The prices for Bergers are about ½ cent higher all round.

Lead Pipe to Go Up.—In view of the advances which have taken place in the cost of lead higher prices for lead pipe may be looked for shortly, probably before another week if there is no reaction. Lead pipe is now quoted 10½c and lead waste pipe 11½c.

Iron Pipe Strong. — Despite the advance on wrought iron pipe recorded last week the situation is very firm and there are predictions being made that there will be higher prices in the near future.

The Spring Movement.—In addition to a movement of sugar utensils and tools referred to last week there are other signs of spring business now noted in such lines as polishes, mops, carpet sweepers and vacuum cleaners. Generally speaking the movement of spring lines is satisfactory considering that the season is yet comparatively early.

Tin Ware Higher.—With the rise in the tin market there have been advances on tinware. New discounts are as follows:

General discount	25-5 per cent.;
Creamery cans	35 per cent.
Railway cans	40 per cent.

A readjustment of the basis of the discounts has been made so that there are now only the two exceptions indicated above.

Galvanized Ware.—Increases have also been made on galvanized ware, the new discounts being: Dufferin pails, English pattern pails and washtubs 20 per cent. and coal hods 12½ per cent. The former discount was 20 and 10 per cent.

Old Materials Still Higher. — Still higher prices are being quoted for different scrap metals with the general advance in the metal markets. New quotation this week are: Brass, light, 11¼ cents lb.; Zinc, heavy, 15½ cents lb. Copper, heavy, 13 cents lb.

Shot Up Again.—Following the rise in the lead market there has been another advance in shot, the Montreal basis being increased to $12 net.

TORONTO

TORONTO, March 2.—Conditions in the hardware trade are much the same as last week as regards volume of business and general upward tendency in prices. The local teamsters' strike has been settled, and the congestion of freight at the terminals is being rapidly relieved. The embargo which the railways placed on many classes of shipments consigned to Toronto has been lifted, and conditions locally are now practically normal. Some inconvenience is, however, being experienced on account of the embargoes existing on some Eastern railways in United States on goods consigned to ocean ports. This embargo is delaying shipments from manufacturers in the States to Canada. The situation as regards ocean transportation has not improved. The shortage of tonnage and abnormal freight charges are causing considerable anxiety, and delays are also helping to increase the cost of the goods. There have been no serious developments in the Eastern States with regard to labor troubles, but the situation has not improved very much. Manufacturers continue to have considerable difficulty obtaining raw materials in sufficient quantity to fill their requirements, and the outlook in this re-

SALESMAN WANTED

We want a clean-cut, aggressive salesman of good personality to represent Hardware and Metal in excellent territory, as advertising salesman. Apply giving full particulars and references to The Manager, Hardware and Metal, Toronto.

gard is getting serious. Prices of ingot metals are high and with little or no indication of a decline.

Prices Still Advancing.—The upward tendency in prices continues, and many lines have been affected. There have been fewer changes in staples this week, the market being steadier following the numerous advances announced last week. Indications, however, point to higher prices in many lines in the near future as conditions in the raw material markets show no improvement and are gradually getting more acute. Prices of all raw materials continue to advance, and many are becoming very scarce, thus affecting many lines of hardware. A further advance of 5 per cent. has been made in saws and carpenters tools. Firmer, framing, and other lines of carpenters' chisels, draw knives, bench axes and kindred lines have all been advanced by the makers, who have intimated that a further advance will be necessary in the near future. An advance of 15 per cent. has been made in valves, while plumbers' brass goods are also up 20 per cent. A new discount of 75 per cent. has been issued on hardware tacks, nails and capped goods. Advices received from manufacturers of ready roofing and similar lines indicate that a sharp advance in prices is probable in the immediate future. Lumbering tools have all been advanced, and manufacturers have intimated that a further increase in prices may be announced about the end of the month. A prominent hardware manufacturing concern in Ontario, who recently raised their prices 7½ per cent., have made another advance of 5 per cent. on all their lines. Prices of lawn mowers have been advanced 10 per cent. Makers of cross-cut saws have advised the trade of an advance in prices.

Metals Firm.—The metal markets continue strong, and the high levels of last week have been well maintained. Indications rather point to a cessation in the activity which has prevailed in nearly all the metals during the last few weeks. The upward movement of copper seems to have stopped at any rate in the meantime, but the market is still strong, and there is no indication of any recession. A tight situation has developed in the tin market at New York, and prices advanced sharply, but has not so far affected the local market, although there is every possibility of higher prices in the near future. Spelter is firm and unchanged, although higher in London, due to a scarcity of spot metal. The lead market is very strong; a tight situation exists caused by a scarcity of spot metal. Antimony is unchanged, and the market is firm, due to a continued scarcity of nearby metal. There is a continued scarcity of spot aluminum, and the market is very strong, but unchanged.

Copper Firm.—The upward movement has apparently stopped, but the market is very strong and the situation unchanged. Buyers are reported to be well supplied for immediate needs, and not inclined to increase their future purchases unless consuming requirements are affected. The position of copper is a sound one, and the present price, although higher, is due entirely to actual supply and demand. It is, therefore, highly probable that the present level will be maintained for some time to come. Quotations are unchanged and nominal at 30½c per pound .

Tin Strong.—A tight situation in the tin market in New York caused a sharp advance to 50c in that market; the local market, however, has not as yet been affected. The market in London continues to advance, but the reason for the movement is not clear, but some importers claim that it is on account of difficulties in obtaining permits and that there is very little metal for delivery in the next two or three months for sale. Quotations are very firm, but unchanged at 48c per pound.

Spelter.—Spelter is higher, following an advance in London, although the New York market is dull and easy. The demand for spelter from the brass mills continues heavy, but the price is too high to interest the galvanizing trade. Spelter has advanced 1c, and is now quoted locally at 25c per pound.

Lead Strong.—Prices are unchanged at the "Trust" price of 6.30c, New York, but higher in the outside market. The market has an upward tendency, and higher prices appear probable, as a tight situation for spot lead has developed in the New York market. Local quotations are firm at 8¼c per pound.

Solders.—Quotations are unchanged at last week's level, but the market is firm and higher prices may develop in the near future owing to developments in the tin market. Prices of solders are given in the current market quotations.

Valves, New Discounts.—Owing to the increase in cost of raw materials, prices of valves and plumbers' brass goods have advanced. New discounts have been issued, and are as follows:—Globe, angle and check valves, with brass body, 37½ per cent.; same type of valves with iron body, 45 per cent.; brass gate valves, 45 per cent., and iron gate valves 60 per cent. In plumbers' brass goods, valves for ground work are 56 p.c.; standard compression work, 65 p.c.; high-grade compression work, 59 p.c.; cushion work, 50 p.c.; filler work, 58 p.c.; No. C, 58 p.c.; Nos. 1 and 2 basin cocks, 53 p.c.; flatway stop and stop and waste cocks are 60 p.c., while roundway are also 60 p.c. The advance is equal to about 10 per cent. for valves and 5 per cent. for plumbers' goods.

Galvanized Sheets Firm.—The galvanized sheet market continues very strong, and higher prices are looked for in the near future. The continued steady advance in spelter is restricting the output of galvanized sheets and increasing cost of production. The high cost of black sheets and acids is also affecting the situation adversely.

Iron Rivets Advance.—A new discount of 55 per cent. on iron rivets and burrs has been issued. The former discount was 60 per cent.

Bolts and Nuts Higher.—A new list of discounts has been issued by makers of bolts and nuts, making the new prices about 5 per cent. higher. The new discounts are given on page 44.

Hardware Tacks Up.—Makers of hardware tacks, nails and capped goods have made a change in the discount from 80 and 20 per cent. to 75 and 25 per cent.

Ready Roofing.—Prices of ready roofing are very firm, and indications point to a sharp advance in the immediate future.

Lawn Mowers Advance.—Makers of lawn mowers have advanced prices 10 per cent. owing to the increase in cost of raw materials.

Lumbering Tools Up.—Following the withdrawal of prices on lumbering tools, makers have now raised their prices, and there is a possibility of another advance towards the end of the month.

Plow Lines Advance.—Prices of plow lines have advanced on account of the increase in cost of fibres. Russian hemp plow lines are now quoted at $3.80, and bleached flax at $5.75 per dozen pairs.

Chisels, Draw Knives, etc.—Prices of firmer, framing and other lines of carpenters' chisels, draw knives, bench axes, etc., have all been advanced by the makers. It is possible that a further advance will be announced later.

Saws and Tools Higher.—Makers of saws and tools have announced a further advance of 5 per cent. Prices of cross-cut saws are also higher.

Utensils.—Galvanized and japanned ware are firm at the new discounts announced last week. Tin and copper ware firm and unchanged, but it is expected that makers will raise their prices to cover the increase in cost of production, due to the prevailing high prices of raw materials.

Wire.—The market is strong, and wire is firm at the new price of $3.45 base announced last week. The market in the States is very strong, and prices of wire and wire products are advancing steadily, which may in the near future result in high prices locally. Galvanized wire particularly is being affected by prevailing conditions, and quotations are practically nominal.

Poultry Netting.—Although poultry netting is unchanged, the situation has not improved, and makers are experiencing the greatest difficulty in obtaining raw materials. Wire and spelter have been going up steadily for some time, and prices of netting are bound to be affected. There is practically no netting being imported, and almost the entire demand has to be supplied from domestic plants.

Wire Nails.—The market is strong, and wire nails are unchanged at $3.15 per keg base. Cut nails are still quoted at $3.20 per keg base. The wire rod situation is getting more acute, as the mills are getting further behind on deliveries ,and the price continues to advance steadily.

Rope Strong.—The outlook in the cordage industry is not encouraging, and there is little hope for improvement until the war stops. Conditions in the fibre markets are steadily getting worse,

as the shortage of raw materials is becoming more acute and values are increasing. The shortage of tonnage and abnormal high freight rates are affecting the situation more than any other cause, and there is no relief in sight. Prices of all ropes are very firm and unchanged, and an advance would not cause much surprise.

LONDON

LONDON, Feb. 29.—Business in this centre continues in a fair condition. Merchants are busy taking shipments of booked goods and are getting ready for the spring trade. The general outlook for spring business is on the whole good. Prospects in the building trade are not as numerous as usual consequently business through this channel cannot be expected in as large quantities as heretofore. Collections on the whole have been good. There have been several price changes during the week. The trend on the whole is upward, with the exception of turpentine, which has taken a drop of 9 cents per gallon.

Drop in Turpentine.—Turpentine in barrel lots is quoted at 78c per gallon, 2 to 4 bbl. lots, 77c 5 gal. lots 85c.

Linseed Oil Firm.—Prices of linseed oil locally remain firm although the market is weaker. There has been a fair sale at the present quotations. Raw linseed oil is quoted in 1 to 2 bbl. lots at $1.02 per gal.; 3 to 5 bbl. lots, $1.01 gal.; 6 to 9 bbl. lots, 99c Boiled linseed oil—1 to 2 bbl. lots, $1.05; 3 to 5 bbl., $1.04; 6 to 9 bbl., $1.02.

Paris Green Higher This Year. — Prices for Paris green are much higher this year than previous years. Potato bugs are beginning to snicker to themselves. C. P. C. grades are quoted as follows: 1-2 lb. pks., 44¼c, 1-lb. pks., 42¼c; 25-lb. drums, 40¼c; 50-lb. drums, 40c; 100-lb. drums, 40c; 250- lb. casks, 39c; 600-lb. casks, 38¾c.

Solder.—Half-and-half solder is quoted at 27½c per lb.

Advance in Varnishes Due.—Dealers are expecting an advance in the prices of varnishes in the near future. An increase from 20 to 25 per cent. is looked for.

Bathroom Fixtures Advances.—Quotations for N. P. Bathroom fixtures show an advance in price of about 20 per cent.

Hinges Up.—An advance of about 25 per cent. in the price of all polished brass hinges, hasps, corners, etc., has been recorded during the week.

Brass Wire. — Soft copper wire is quoted at 10 per cent. off the net list.

Advance Expected in White Lead, in Oil—A further advance in the price of white lead in oil is expected to take place in the near future. Pure white lead in oil quoted at $11.45 per 100 lbs. in ton lots; in less than ton lots $11.75.

WINNIPEG

WINNIPEG, March 2.—With the first week in March now with us, jobbers have been able to look back over the business done during February, and they all report decided increases over the corresponding period of last year. As a matter of fact, business is coming along just as rapidly as it can be handled conveniently, and there may develop some delays in the matter of shipping. This is due not only to the shortage prevailing in some lines of merchandise, but various jobbers are experiencing great difficulty in securing proficient help. There is no doubt that the war, with the enormous number of those enlisted for active service, has made a big difference in the staffs of some of the jobbers, and competent help at the present time is at a premium in this city.

Next Fall's Prices.—Jobbers have already made prices on skates, hockey sticks and sundries for next fall's shipment, and it is advisable for all retailers to place their orders as promptly as possible. It is more than likely that some orders will be taken subject to the jobbers being able to procure the stock. Manufacturers are already hinting at a possible shortage, and it will be a question of "first come first served" with orders placed for the above lines.

Price Changes.—There are a few changes to note this week. Fence staples have again advanced, and ruling prices are as noted herewith:—Fence staples, bright—Fort William, $3.50 per 100 lbs.; Winnipeg, $3.90 per 100 lbs.

Bale ties and annealed wire have also been affected, and the prices quoted on these lines to-day are as follows:—Bale ties, $4.60 per 100 lbs.

Annealed wire is quoted, per 100 lbs., as follows:—No. 9, $4; No. 10, $4.06; No. 12, $4.20; No. 14, $4.40; No. 15, $4.55; No. 16, $4.70.

Wire Nails Higher.—Wire nails have advanced 10c per 100 pounds, and quotations are now as follows:—Fort William, $3.45 per 100 lbs.; Winnipeg, $3.85 per 100 lbs.

Barb Wire Higher.—An advance of 10c per spool has taken place in the price of barb wire, and new prices are shown in current quotations.

Iron Pipe Higher.—Following the advances noted in Eastern reports in Hardware and Metal last week, black and galvanized iron pipe have advanced here, and quotations are now as follows:—Black (per 100 ft.)—⅜ in., $3.24; ½ in., $4.05; ¾ in., $4.86; 1 in., $7.11; 1¼ in., $9.68; 1½ in., $11.57; 2 in., $15.57. Galvanized—⅜ in., $5.27; ½ in., $6.17; ¾ in., $7.65; 1 in., $11.30; 1¼ in., $15.30; 1½ in., $18.32; 2 in., $24.62.

Revised Prices on Bolts.—The following new discounts have gone into effect on bolts:—Cariage bolts, ⅜ and smaller, 42½ per cent.; 7-16 and larger, 27½ per cent. Machine bolts, ⅜ and smaller, 42½ per cent.; 7-16 and larger, 32½ per cent. Sleigh shoe bolts, ⅜ and smaller, 32½ per cent.; 7-16 and larger, 27½ per cent. Plow bolts, 32½ per cent.

Nuts.—Square, small lots, 1c advance over list; case lots, net list. Hexagon, small lots, ¼c advance over list; case lots, ¾c off list.

Demand for Seasonable Lines.—There is a big demand for seasonable lines, and large orders are being received for paints and oils, screen doors and windows, refrigerators, polish mops, wall cleaners, etc., and this would seem to indicate that it won't be long before spring is with us again.

Other Lines Affected.—New prices have been issued on bright tinners' wire, stove pipe wire, and well casing as follows:—

Bright Tinners' Wire—	Per 100 lbs.
0-9 gauge	$4 30
10 gauge	4 36
11 gauge	4 42
12 gauge	4 50
13 gauge	4 60
14 gauge	4 70
15 gauge	4 85
16 gauge	5 00
Stove Pipe Wire—	
19 gauge	6 25

WELL CASING

Screw and Socket—	Ft. William	Winnipeg
4¼ in.	$36 49	$40 09
4½ in.	39 44	43 30
5 in.	45 22	49 76
5⅝ in.	55 86	61 47
6¼ in.	63 86	70 27
Inserted Joint—		
4¼ in.	$37 33	$40 85
4½ in.	40 30	44 10
5 in.	46 30	50 75
5⅝ in.	57 20	62 67
6¼ in.	65 40	71 62

PRACTICAL SHEET METAL WORK

(Continued from page 39.)

end of the pipe is always put into the extreme edge as shown. Fig. 6 is a cone; and pattern for same.

First the elevation A,B,C, is drawn. Next the plan.

This is divided into equal parts, 1. 2, 3, 4, 5, etc. To develop the pattern, place point of compass at A in elevation and open up to C, and with a in Fig. 7 as centre draw arc b c and transfer the measurements from plan in Fig. 6, to arc Fig. 7. Allow extra material for whatever kind of seam or joint is to be used, and the pattern is completed.

Fig. 8 is a very similar problem and the elevation will be found to be exactly the same as Fig. 6, but the plan is square. This will make a pyramid.

To develop pattern Fig. 9, the same course is followed as in Figs. 6 and 7 except that the arc a, b, c, is only divided into four equal parts, as at 1, 2, 3, 4. 1, by drawing a line from 1 to 2, 2 to 3, etc., the pattern is complete, not omitting the allowance for joint.

In Fig. 10 is shown how the pattern for a bucket is developed.

First draw the elevation A B C D, and continue the lines AC and BD until they meet as at point E. Next with E as centre draw an arc as shown.

Then draw a plan and divide into any number of equal parts and transfer these measurements to the arc just drawn. In this case only one-half the pattern is developed.

(Continued in next issue.)

The Canadian Brush Machinery Co., has been incorporated at Ottawa, with a capital of $50,000 to carry on business as mechanical engineers, machinists and manufacturers of machinery and tools, at Walkerville, Ont.

WEEKLY PAINT DEPARTMENT

Embargo Has Been Placed on Oil Cake

Manufacturers Are Unable to Export By-Product of Linseed Oil—Condition May Increase Price For This Class of Oil—But Argentine Crop May Ease Situation

THE fates seem to be conspiring to send the price of paint materials still higher. Linseed oil is the next item on the bill of fare which seems destined to go a-soaring. It is now thirty cents a gallon higher in price than it was this time last year. On February 9, 1915, the price was 63 cents a gallon. On the same date this year it was 93 cents. The increase in the price of linseed oil during the year has been largely due to the diminution of the crop of flaxseed in the prairie provinces. The yield last year was two and one-quarter million bushels, the lowest it has been during any year for the past six years. Yields of flaxseed since the year 1910 in the three western grain provinces, Manitoba, Saskatchewan and Alberta have been as follows:

Decrease in Canada's Flax Crop

1910	3,000,000 bushels
1911	8,000,000 bushels
1912	22,000,000 bushels
1913	14,000,000 bushels
1914	4,000,000 bushels
1915	2,250,000 bushels

The decrease in the crop of flax was due largely to the appeal to the farmers to raise wheat for the sustenance of the Empire in this her testing time. Results of that appeal have come fully up to expectations, thanks to favorable contributory circumstances such as climatic conditions and a sufficient supply of labor to garner the crop. But the crop of flaxseed has consequently decreased very considerably. And linseed oil has increased over thirty per cent. in price.

Embargo on Oil Cake Shipments

But the factor which looms on the horizon at the present time and seems to point to a still further increase in the price of linseed oil is due to the probable inability of the manufacturers to dispose of the oil cake. This is a by-product of the manufacture of the linseed oil, which enters largely into the determination of the price of the oil. Owing to the lack of tonnage to take care of the export trade an embargo has been placed on the export shipment of oil cake. This means that the manufacturers practically have to depend on the home market for the disposal of their oil cake.

At the outbreak of the war large quantities of the oil cake were sent to Germany and Austria. This market was shut off and it remained for the manufacturers to find a market for their product in the countries of the Allies. Great Britain, France and Holland then consumed the greater part of the exported oil cake.

Oil Cake a Food for Animals

When flaxseed is ground and pressed for the extraction of the linseed oil the solid refuse comes from the press in the form of slabs or cakes and is called linseed cake. It is also known as "linseed oil cake" or simply as "oil cake." When these cakes are ground it is called "linseed oil cake meal", or "oil cake meal", or "oil meal". The butter makers of Denmark and the beef and mutton growers of England and Scotland import hundreds of thousands of tons every year. It is recognized as the quickest food to fatten animals. it multiplies the feeding values of all grains and leads all other feeds in manurial value for fertilizing the soil. Canadian farmers have used it to a certain extent in the fattening of stock, but there is still a wide field for the increase of its use. Professor Frank T. Shutt, chemist of the Dominion Experimental Farm at Ottawa, in an analysis of the various foods for their fattening and flesh-producing qualities shows that linseed cake has the highest value of all the grains in use for feeding purposes. Proportionate values of some of the grains and feeds are as follows: Buckwheat 10.0 per cent.; corn, 10.3 per cent.; oats, 11.8 per cent.; wheat 11.9 per cent.; barley, 12.4 per cent.; pea meal, 21.2 per cent.; bean meal, 23.1 per cent., and ground linseed cake, 32.9 per cent. This is the relative value of these grains as flesh producers in the amount of protein which they contain. Protein is the flesh-producing product. The manurial value of the linseed is also the highest of all the various feeds.

Affects Price of Linseed Oil

If the export market is shut off the price of linseed cake will naturally decrease. In the United States authorities look for the oil cake to decrease from five dollars to eight dollars per ton. In that country it is estimated that such a decrease in the price of oil cake will send the price of linseed oil up three-quarters of a cent per gallon for each dollar of decrease. In other words, if oil cake goes down $5 a ton linseed oil will go up in the neighborhood of four cents per gallon. If it decreases $8 per ton the increase in the oil will be in the neighborhood of six cents per gallon. If the same proportion were carried out in Canada there would be approximately an increase of one cent per gal. for each dollar decline in the price of oil cake. This is due to the fact that the Imperial gallon is used in Canada, which is larger than the wine gallon measure of the United States.

Advances in Oil Cake

Oil cake to-day is selling at $37 per ton in carload lots. In July, 1914, it sold for $33 per ton, while in August, 1913, the price was $30. One of the factors which has operated to bring about an increase in the price of oil meal has been the great advance in the price of ocean freight rates. A little over a year ago, or approximately at the beginning of the war, oil cake could be shipped to the United Kingdom for 13 cents a hundredweight. To-day the rate to Avonmouth, for instance, is 63 cents. This is an increase of 50 cents per hundred. Things have even gone farther. Oil cake will not be carried at all in ocean freights except where cargoes have been contracted for with the shipping companies some time in advance.

Argentine May Come to Rescue

There is another factor, however, which must be reckoned with in the determination of the linseed oil price. Argentine flaxseed has but recently been harvested. There will be from 37,000,000 to 40,000,000 bushels for export from that country if bottoms can be secured for the shipment of the seed. But that is where the rub comes in. Tonnage is not available for the transatlantic trade

Your Store is What You Make It—

to ship oil cake. Will it be available to carry flax from Argentine to this country? Flax is now quoted in the neighborhood of $2.14 per bushels. On October 14 of last year it was selling at $1.64 per bushel. The average yield of flax per acre is from eight to twelve bushels. The farmers of the prairie provinces sow it as the first crop for the newly-broken land. If the Argentine crop comes in the price of linseed oil should go down. If seed cannot be exported from that country in any considerable quantity the embargo on oil cake will tend to send the price of linseed oil still higher.

Third Generation at the Helm

Walter B. Ramsay Made President and Managing Director A. Ramsay and Son Company—Arthur D. Brown Appointed Manager

Back in 1842, which by simple arithmetic means 74 years, Alexander Ramsay & Son Company, Montreal.

In 1840, just two years before this event, the first Alexander Ramsay's son who likewise bore the name Alexander was born in Scotland.

He entered the paint business established by his father, and for a great many years until his death a few weeks ago, directed the operations of the Company.

Following the death of the second Aleander Ramsay, Walter B. Ramsay has been made President and Managing Director.

The present head of A. Ramsay, Son Company is one of the fine types of and future promise.
young business men to whom Canada owes so much of her present prosperity

Mr. Ramsay was born in Montreal in 1881 and entered his father's employ 16 years ago. In true old apprentice fashion he worked in every department, starting at the lowest job in the factory, and progressing, as his skill and experience accumulated, to the position of manager of the business during the last five years of his father's lifetime.

Mr. Ramsay brings to his new office the combination of family tradition for high and honorable dealings, a thorough grounding and practical experience in manufacturing and selling his product and the broad gauge imagination and energy of youth.

As were his father and grandfather before him, the new President of A. Ramsay & Son Company is very much interested in military affairs, and is an Officer in the 5th Royal Highlanders in Montreal.

Coincidental with Walter D. Ramsay's position as President and Managing Director, Arthur D. Brown who for twenty-one years has been connected with the business, for the last four years Sales Manager, was made Manager.

Mr. Brown's connection with the firm dates back to 1895. He came with them as a junior traveller in a poor territory. During the eighteen years of his experience on the road Mr. Brown has come into intimate contact with practically every paint dealer from Montreal to the Pacific coast.

He remembers perfectly the days when the trip from Calgary to Edmonton was a "jolt" in between towns, no matter how much he sold at either end. For he covered this 200 miles by buckboard, and anyone who is familiar with those early roads will sympathise humorously with Mr. Brown's recollections of them.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 3.—While the new schedule of paint prices, covering general advances, which went into effect nominally on the first of the month, has had some effect in checking business, paint manufacturers report that conditions are generally satisfactory, considering the circumstances, and that business is coming fairly well on the new basis. As has been previously explained, the different selling plans vary the application of the advance amongst certain paint houses.

Features of the week are a further advance on white lead, which is very strong, and material declines on oil and turpentine. In a general way, however, the strength of lead, zinc, colors and chemicals offset the declines referred to, and unless these are continued or there is relief in other quarters, a further advance on ready-mixed lines may be predicted to take place about six weeks or two months hence.

Reports indicate that the movement of spring stocks on booked orders has been earlier than usual this season, and that there have ben fairly substantial deliveries going out for some time with a promise of a fair volume continuing until the opening of navigation and readjustment of freight rates brings about the big shipments.

Linseed Oil.—Following the downward trend of the flax market, there is a markedly easier feeling in the linseed oil situation with reductions of 3c to 6c all round recorded. The range of 3c between different quotations continues, and the market basis may be regarded about as follows:

	Raw.	Boiled.
1 to 2 barrels	97c-$1.00	$1.00-1.03
3 to 5 barrels	96c-99c	99c-$1.02
6 to 9 barrels	95c-98c	98c-$1.01

White Lead Advances.—On the head of the strong situation in white lead in oil, referred to last week, when it was explained that higher prices were warranted, there has been a further strengthening of the pig market, with the result that an advance of 25c to a ton basis of $10.55 has been forced. On the higher basis the market is very firm, and it is stated that the position of pig supplies warrants still further advances, despite the decline in the price of linseed oil. However, the volume of business passing is not heavy, and this is a considerable factor in maintaining moderate price levels. An indication of the strength of the market is the fact that even on the advance no orders are being booked, quotations being for immediate acceptance and immediate delivery only. Up to this time orders have been accepted for delivery up to opening of navigation.

Turpentine Easier.—Following weaker conditions in the turpentine market, with an easing of import prices, there has been a material decline in the local quotations. Generally speaking, the single barrel basis may be regarded as 78c, although there are higher quotations still heard at writing, where readjustments have not yet been made. Quotations:—Single barrels, 78c; 2 to 4-barrel lots, 77c.

Gasoline on the Rise.—Gasoline is very strong at the advance recorded last week, and the indications are that there will be further increases of a material character. In the United States 30c and 35c gasoline is being talked of as the result of the manner in which the consumption is increasing in proportion to production. When it is considered that Canadian measure is about one-fifth larger than American, and that there is freight and other charges to be considered, it can be seen that quotations in this country are likely to soar to record levels. Quotations are:

Gasoline, in barrels 31c
Gasoline, in drums 28½c
Gasoline, tank wagon 28c
Benzine ½c lower.

Paris Green.—New prices are in effect for Paris green. It had been predicted that with the rise in the cost of certain chemicals there would be very much higher prices, but it was hardly expected that the increase would be so great. A year ago the quotation for 600-lb. barrels was 18c, while the 1916 price is 38¾c.

TORONTO

TORONTO, March 2.—There is a much quieter tone in the paint market this week, a reaction after the buying movement during February. Dealers are now generally well covered for their requirements, and buying will be hand-to-mouth until after the spring painting season has opened up and stocks have moved out in sufficient volume to warrant further buying. All paint manufacturers have now put their advances on ready-mixed paints into effect, the last ones coming into line on March 1. Another advance in lead in oil has caused some stir in the market, but the high cost of pig lead left no other alternative. A sharp break in turpentine has taken place locally, Savannah prices still being steady. Linseed oil has a weak tendency, but is unchanged locally. The new prices for Paris green are now in effect, and are considerably higher than last year, due to the much higher cost of raw materials. Gasoline is very firm, but unchanged, although an advance may be expected in the near future.

Linseed Oil Weaker.—The oil market is weaker, following a decline in seed at Winnipeg, but quotations are unchanged locally at last week's level. The situation continues much the same, and there is nothing of particular interest to note this week. Crushers state that they are unwilling to sell at lower prices than prevail at present owing to the high cost of seed. The demand for oil is light.

	Raw.	Boiled.
1 to 2 barrels ...	$1.02	$1.05 per gal.
3 to 5 barrels ...	1.01	1.04 per gal.
6 to 9 barrels ...	0.99	1.02 per gal.

Turpentine Declines.—A sharp decline of 9c in the market occurred early in the week, and turpentine is now quoted at 78c. The demand, which has been very light for some time, has caused considerable price-cutting in an effort to stimulate business. Although the present price is firm for spot turpentine, quotations are being shaded for futures. The decline is local, as the market at Savannah is steady and quotations unchanged. Rosin is weaker, but unchanged for most grades, and no new rosin is coming in yet. The turpentine market is weak, and the following prices are being quoted in Toronto:—1-barrel lots, 78c; 2 to 4 barrels, 77c; and 5 gallon lots, 85c per Imperial gallon.

Paris Green.—This week Berger's Paris green prices have been issued. It will be noted that both brands are practically double last year's prices, which is due to the big increase in cost of all raw materials, sulphate of copper and chemicals used in the manufacture of Paris green. New prices are shown in current market quotations.

White Lead Again Advances.—Another advance in white lead in oil has been made, bringing the price up to $11.70 in ton lots. While not altogether unexpected, this last advance has caused some excitement in the trade, as the price is abnormally high, and there is nothing to indicate that the top of the market has been reached. The pig lead situation is very strong, and higher prices may yet develop in that market.

Mixed Paints.—The advances announced in these columns some time ago to take effect March 1, in ready-mixed paints, are now in effect throughout the trade. A considerable volume of business was booked during February, and as a result the market is now quiet, and will no doubt remain so for some time. Although there have been big increases in the cost of raw materials used in the manufacture of mixed paints, a further advance is hardly to be expected until late in the season.

BRANDRAM-HENDERSON LIMITED

Montreal Halifax St. John Toronto Winnipeg

B — H

THE EDGE *of the* WEDGE

in building up a Paint Department
is to be in a position to supply

B.-H. "English" Paint

when called for;
the rest follows as a matter of course.

70%

Brandram's B.B. Genuine White Lead in the base of all tints and white.

30%

of pure White Zinc in the base of all tints and white.

Current Market Quotations

These prices are for such quantities as are usually ordered by retail dealers. Large buyers can frequently make purchases at better prices.

S. W. P.

Is a line that no good Hardware Dealer or General Store can be without if success in this year's paint business is to be contemplated.

Our method of reaching the consumers and creating business for our agents is unique, thorough, and far-reaching. Our aim is to aid our agents. The many other special products for every purpose to beautify homes make the consumers your friends and our friends.

The Spring Painting Season is fast approaching. Is your stock satisfactory?

Don't LOSE SALES BY SAYING "WE DON'T HANDLE IT," BUT INCREASE YOUR SALES BY SAYING "CERTAINLY, WE CARRY S-W CO.'s FULL LINE."

Re Gauges of Sheets.

In the quotations which follow on sheets, it is advisable to note that Queen's Head, Fleur de Lis, and Gorbal's Best Best, also Colborne Crown are English gauges, while Apollo and Premier are U.S. gauges. American 10¾ oz. is the same as English 28 ga.; American 28 gauge is the same as English 26 ga. The heavier gauges are almost identical, the English sheets running slightly lighter than the U.S. standard.

Interior of Store of W. P. Hoffman, Who Sells Several Carloads of Pratt & Lambert Varnishes Yearly from Start of $500

FROM $500 START TO YEARLY VARNISH SALES OF SEVERAL CARLOADS

Read Hoffman's letter—it tells why he was able to increase his Pratt & Lambert Varnish sales from the amount represented by the little white oblong to the amount shown by the big oblong—it's full of meat for any dealer who wants to sell more varnish, make a better margin of profit and build a better, more substantial class of trade.

Write for Complete Pratt & Lambert Dealers' Proposition.

Hartford Conn. Jan. 11, 1916. 191

Pratt & Lambert,
Buffalo, N.Y.

Dear Sirs:

When we started handling Pratt & Lambert Varnishes eight years ago, our first order amounted to Five Hundred Dollars. Previous to that time we had carried more or less lower price goods which were good value for the money, but we found that by handling Pratt & Lambert Varnishes we could get more trade and better trade that paid us handsomer profits and meant better satisfied customers.

As a result our first order has grown from Five Hundred Dollars to Fourteen Thousand Dollars that we are now buying in carload lots. "61" Floor Varnish and Vitralite sales particularly have shown a nice increase from a few cases a year at the start to several hundred now.

We believe the high quality of Pratt & Lambert goods plus your plan for helping us sell them is largely responsible for this showing.

The magazine advertising makes your varnishes well known to everyone, while your promotion work with architects makes them friendly towards your goods with the result that we have an opportunity to get the business on most construction work in this vicinity. Your plan of reaching home builders and small construction work through letters and helpful literature is a distinct help to us.

We enjoy a good painter trade on Pratt & Lambert Varnishes. The goods have always been well and favorably known to painters, and your little painters magazine "Varnish Talks", does not let them forget the merits of Pratt & Lambert Varnishes.

All this co-operation tied to our store with the attractive store and window display matter, slides and electros, we feel is helping us to get our share of the varnish business in this territory.

We are more than pleased with our success with your line and expect to continue to increase our sales on your goods as much in the future as we have in the past.

Very truly yours,
THE HOFFMAN WALL PAPER COMPANY.

This Oblong Shows Hoffman's First Order of Pratt & Lambert Varnishes

This Oblong Shows Hoffman's Yearly Business on Pratt & Lambert Varnishes NOW as Compared to His First Order Represented by the Little White Oblong

Stratford Extension Ladders

are very easily manipulated and wonderfully strong.

It is the safest and most convenient ladder for painters and contractors, as it can be adjusted to any height required. Has automatic hooks that lock every round and unlock between the rounds.

It is made of clear yellow pine and rock-elm rounds and can be easily converted into two ladders.

In all it is constructed to meet the requirements of a high grade ladder and never falls short of what we claim it to be.

Made 20 to 60 feet long.

Write for catalog—it gives the fullest particulars.

FIRE NOTICE

RENNIE'S SEEDS

We desire to advise our many customers that although we have suffered a very large loss in Sunday's (February 20th) fire, we have sufficient stocks stored at our warehouse at Long Branch and other warehouses in Toronto to enable us to fill orders complete and to take care of the coming season's trade. We commenced shipping on the 21st at noon and orders will be handled in our usual prompt manner.

RENNIE'S SEEDS

HEAD OFFICE: TORONTO, CAN.

All our branches have been supplied with their season's requirements.

Mr. Clerk

YOU'RE A SALESMAN

YOU are just the man we want to get in touch with to represent us during your "off hours" and spare time.

Every day that you work—you sell goods—you are a salesman, it's a salesman we want, to look after our renewal and new subscriptions right in that home town of yours.

Would you like to turn some of that spare time of yours into cash—would an extra $10 a week interest you, if our plan interfered in no way with your regular duties? That's just the amount, **two hours** daily will average **for you** weekly.

Write us to-day. We will be glad to talk it over with you by letter.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Every Minute Pays → YOU ←

IS every minute of your spare time bringing you profitable returns? Through the day time you earn money—why shouldn't your spare time be devoted to bringing you in an extra income?

We would be pleased to tell you about a plan, that although not interfering in the least with your regular duties, will produce for you an extra $10.00 a week. That amount can be increased as you become proficient in the work, and bring into play the salesmanship that your regular occupation gives you.

We need a man in your home town to represent us, and for that service, his earnings will be liberal. That, we will tell you all about when you write us.

Do so to-day—next week every minute of your spare time will count for you in cash.

The MacLean Publishing Co.

143-153 University Ave.

Dept. H.M. Toronto, Can.

In Demand

There is a good demand for a reliable, inexpensive Sprayer. Meet this demand and give your customers that come-back satisfaction. You can do this with the

EUREKA Glass Tank Sprayer

The receptacle of this Sprayer is an ordinary Crown Fruit Jar (one quart size), equipped with a heavy zinc cover. The pump cylinder is made from L. X. tin and is considerably longer than the ordinary glass tank Sprayer. The solution comes into contact with zinc and brass only, which will not easily corrode, thus giving longer service. This Sprayer is strongly made and attractively finished, and is excellent for spraying potatoes, small shrubs and all disinfectants in poultry houses and on live stock. Our prices are in your favor and our quality pleases customers. Let us send you our descriptive catalogue. Write—

NICKEL

SHOT—High and Low Carbon
INGOTS—Two Sizes 25 lb., 50 lb.
Electrolytic Nickel 99.80%

Prime Metals for the manufacture of Nickel Steel, German Silver, Anodes, and all remelting purposes. Our Nickel is produced as rods, sheets, strip stock, wire and tubes.

MONEL METAL

We are Sole Producers of this natural, stronger than steel, non-corrodible alloy. Manufactured forms are rods, flats, castings, tubes, sheets, strip stock and wire. Ask for descriptive booklet.

Send inquiries direct to us.

THE INTERNATIONAL NICKEL COMPANY
43 Exchange Place, New York.

LONDON BAR IRON

High Grade

Our iron bars are tough, fibrous and corrosion-resisting, just such bars as your blacksmith friends want to use. Why not carry them in stock for your customers, or if you prefer, have them direct shipped from the mill?

OPEN HEARTH STEEL

THIS ACTUALLY HAPPENED

Here's positive proof of the strength of Peerless Fencing. This actually happened. We don't ask you to take our word for it. Read what the owner says. Here's his letter:—

Dear Sirs: I am writing a testimonial as to the strength of your Peerless Junior Chicken Fencing. Mine is four feet high. It turned two horses, each weighing 1400 pounds. They ran full tilt into the fencing about 2 rods from each other at the same time. The result was that they turned a somersault over the fence, alighting on their heads and necks, scratching them up some, but the fence remained intact. Yours truly,

Joe Boothroyd, Surrey Center, B. C.

Think of it! A dead weight of nearly a ton and a half coming with violent force against our poultry fencing—not field fencing—and yet

Our PEERLESS Junior Poultry Fencing Held

What greater test can you ask? We build it stronger than is necessary under ordinary circumstances. We build it of Open Hearth steel wire with all the impurities burned out and all the strength and toughness left in. Well galvanized. Every intersection is locked together with a Peerless Lock. Top and bottom wires of Peerless Poultry Fencing are heavy—extra strong. Consequently, fewer posts are required. Peerless fencing can't sag—can't get out of shape—can't help giving absolute satisfaction.

Catalog giving details on request. Describes our poultry, farm and ornamental fencing, also Peerless farm gates.

Agencies almost everywhere. Agents wanted in all unassigned territory.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance): 2c per word first insertion, 1c per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

WANTED

SALESMAN WITH FOURTEEN YEARS' RETAIL experience desires to improve present position. Married and teetotaler, and capable of taking charge. Would consider position as traveller, eastern territory preferred. Apply Box 258, Hardware and Metal. (10)

WANTED — A TINSMITH—ONE USED TO installing furnaces, for the City of Hamilton and surrounding districts. Steady position. Apply Box 256, Hardware and Metal. (10)

WANTED—TINSMITHING BUSINESS, CARrying stoves, granite and tinware. Stock not to be over $600. Western Ontario preferred. Address Box 725B, Forest, Ont. (11)

ADVERTISING SALESMAN WANTED — WE want a clean-cut aggressive salesman of good personality to represent Hardware and Metal in excellent territory, as advertising salesman. Apply giving full particulars and references to The Manager, Hardware and Metal, Toronto.

WANTED—A WESTERN HARDWAREMAN wants position in retail or wholesale store in the West. Experienced in managing a retail business. Best of references. Apply Box 257, Hardware & Metal, Toronto. (10)

HARDWARE DEALERS — SEND YOUR leaky automobile radiators to us. We specialize on radiator repairs; prompt service. Burrowes Mfg. Co., Toronto.

WANTED — POSITION AS HARDWARE clerk, with Western experience; steady employment. Can furnish best of references. Box 253, Hardware and Metal. (14)

IMPORTANT BRITISH FIRM MAKING cycles and motor cycles need first-class wholesale agent (or agents) for Canada. The goods are of first-class British workmanship and material, at competitive prices, and enjoy a high reputation in the Old Country. Address: Cycles, care of Hardware and Metal, University Avenue. Toronto. (10)

SALESMAN, CLEAN CUT, AMBITIOUS, with successful record of thirteen years' retail and wholesale hardware experience, at present employed as travelling salesman in British Columbia and Alberta, would like to make a change and represent some Eastern cutlery, paint, stove, specialty or hardware house in Western Canada. Apply Box 500, Hardware & Metal, 22 Royal Bank Bldg., Winnipeg. (10)

BRITISH HOUSE MAKING SYRINGES AND spraying machines for every possible use, need Canadian agents. The line is the most complete in the world, and include knapsack and ordinary spraying machines for fruit growers, lime-washing machines for farms, factories, etc. Disinfecting machines for all purposes. Anything in the way of spraying and washing machines made to suit the market. Agents must be aggressive and ready to work the line thoroughly. Write: Spraying Machines, Hardware and Metal, University Avenue, Toronto. (10)

FOR SALE

FOR SALE — HARDWARE BUSINESS IN southern Saskatchewan, on Soo line. Best wheat growing district. Town having five elevators and large trading territory. Present owner wishes to leave for family reasons. Apply to Box 248, Hardware and Metal. (12)

FOR SALE—$5,000.00 HARDWARE STOCK, including fixtures. Inventory has just been completed. This is an excellent opening for a young hardwareman that knows the business. Present owners being engaged in manufacturing find it absolutely necessary to close out the above stock at once. Stock is clean. Large town and country district to cater to, with comparative little opposition. Box 259, Hardware and Metal. (10)

MISCELLANEOUS

WAREHOUSE SPACE TO LET.—WE ARE prepared to rent space, warehouse or forward goods for any manufacturer or commission firm at reasonable charges. Merchants Hardware Specialties, Limited, Box 597, Calgary.

BARGAINS IN PAINTS—A LARGE STOCK of mixed paints, varnish stains, oil stains, colors in oil, enamels, etc., offered in lots to suit, at lower than manufacturers prices, on account of labels and tins slightly rusted and soiled. Fine for advertising job lots or bargains. List on application. J. R. Walker & Co., Montreal. (11)

"NORCROSS" Cultivator-Hoes and Weeders

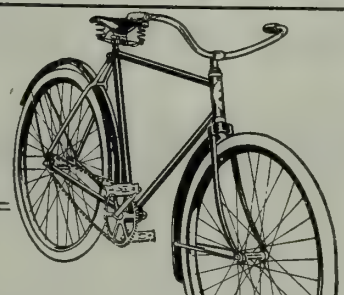
A class of garden tool that's rapidly replacing ordinary hoes and weeders. Users recommend them to their neighbors because more work and better work can be done in less time.

They are imitated (as all good things are) but far from being equalled in quality and service.

BOOSTING THEM MEANS BOOSTING YOUR SALES AND PROFIT.

A postal will get you our 16-page interesting cultivation booklet, with address of nearest Canadian jobber.

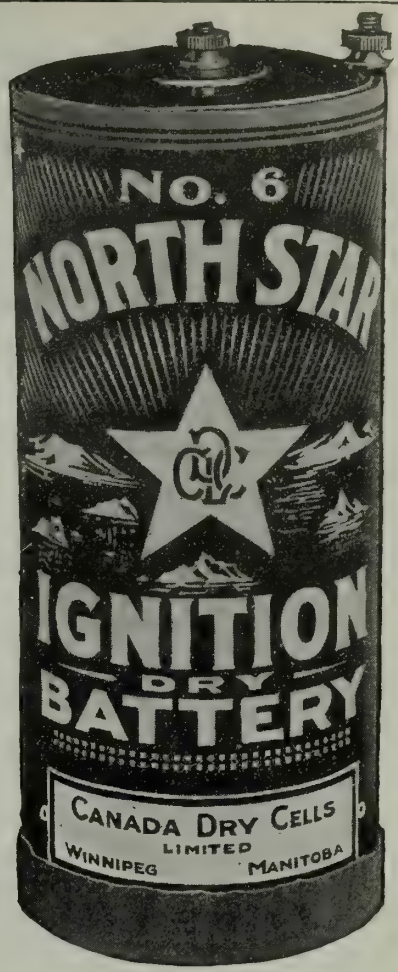
C. S. NORCROSS & SONS
Manufacturers
Bushnell Ill., U.S.A.



Cost You $19.50 Sells for $30.00

Hardware men throughout the country are adding bicycles to their line. **Clean steady business. Big Profits.** Send for our **large illustrated catalogue** and add another profit maker to your business.

Dominion Cycle & Supply Co.
1446 St. Lawrence Blvd.,
MONTREAL, QUE.



"North Star" Dry Cells

will give your trade an overflowing measure of good battery service.

The "North Star" is a Western Battery built for the Western Need. It's merits have made it a big favorite everywhere—the users invariably come back and back again for more. Stock them now.

Your jobber will supply you quickly.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

YOUR GUARANTEE

GIPE-HAZARD STORE SERVICE CO., LTD.
97 Ontario St., Toronto, Canada

INSTALL Gipe-Hazard Carriers — use them ten days—put them to every test — and if they do not give quicker, better and more satisfactory store service than any other system, they may be returned at our expense. Fair enough, is it not? Investigate our modern Electric Cable Cash Carrier and Pneumatic Dispatch Tubes.

Sharratt & Newth's Glaziers' Diamonds

are unequalled for cutting and wearing qualities.

To be obtained from Dealers in Glass Hardware and Painters' Supplies

Agents: A. RAMSAY & SON COMPANY, Montreal.

MASONS SIX-GLASS PLUMBS AND LEVELS

These Levels have two Level Glasses and four Plumb Glasses so arranged that no matter how the tool is taken up, one or more of them are available with which to level or plumb.

Each Glass is set solid in a metal case, which case is screwed into the level stock—a very much more satisfactory arrangement than were the glasses set directly into the wood.

The Glasses are protected on both sides of the stock by a glass disc which serves not only to protect the glass from breakage, but keeps dirt and moisture from the openings. Made in two lengths, 42 and 48 inches long.

THESE ARE NEW TOOLS—SEND FOR FURTHER DETAILS

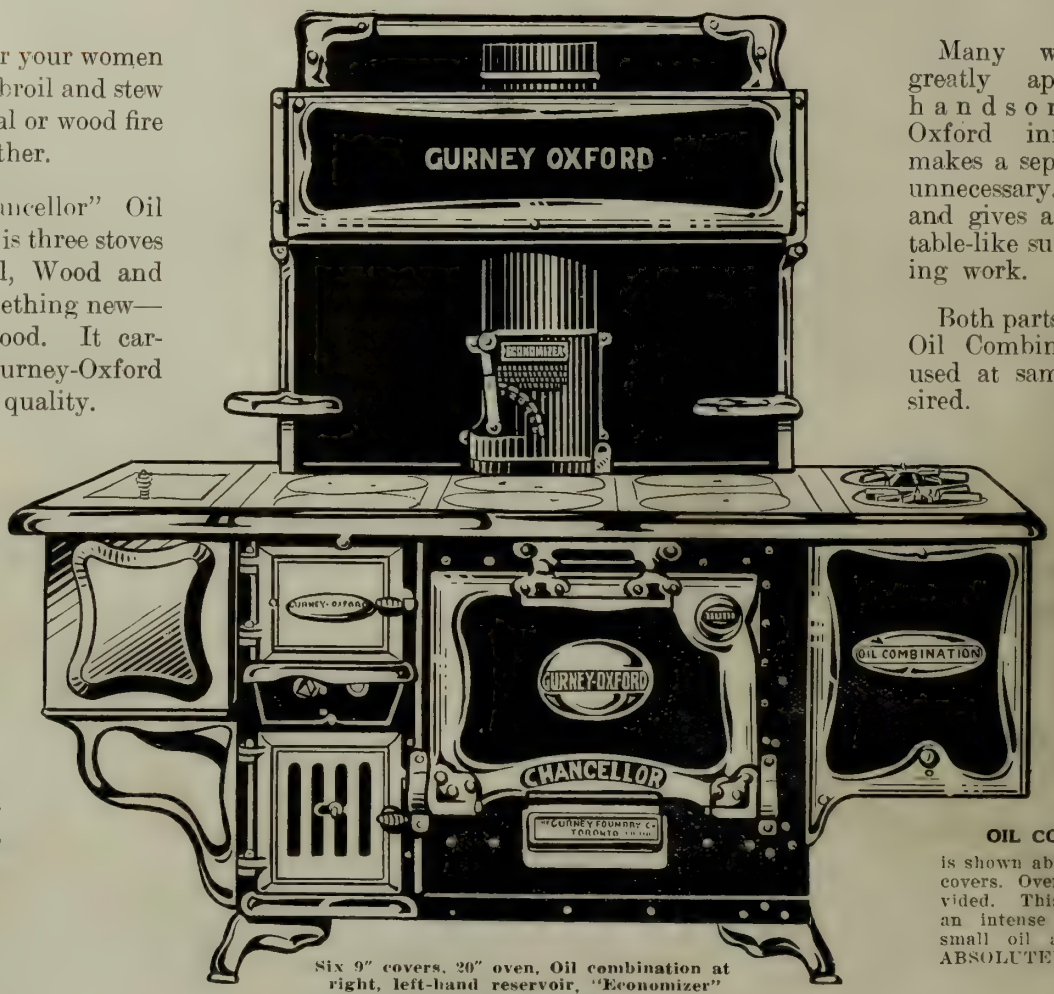
Chancellor Oil Combination
a splendid Gurney-Oxford achievement

Here's the one big advance made in range construction in the last 20 years. Something that is needed in every home where gas is not available for summer cooking.

No need for your women customers to broil and stew over a hot coal or wood fire in warm weather.

The "Chancellor" Oil Combination is three stoves in one—Coal, Wood and Oil. It's something new—something good. It carries the big Gurney-Oxford guarantee of quality.



Six 9" covers, 20" oven, Oil combination at right, left-hand reservoir, "Economizer" and warming closet as shown above.

Many women will greatly appreciate this handsome Gurney-Oxford innovation. It makes a separate oil stove unnecessary. Saves room and gives a splendid, big table-like surface for cooking work.

Both parts of Chancellor Oil Combination can be used at same time if desired.

Can be sold at an attractive price.

OIL COMBINATION

is shown above. Two cooking covers. Oven can also be provided. This Oil Stove gives an intense heat on a very small oil allowance and is ABSOLUTELY ODORLESS.

Be the first in your neighborood to show this exclusive Gurney-Oxford "Chancellor Oil Combination." It will make a hit with every woman who sees it.

For attractive Spring 1916 proposition write

572 WILLIAM STREET, MONTREAL

"It Is Our Hardware Bible," Says President Carter

AT the Annual Convention of the Ontario Retail Hardware and Stove Dealers' Association, held in Toronto, February 22-24, one session was given over to an interesting discussion of fire losses and insurance adjustments. W. J. Carter, 1st vice-president of the association, (elected president at a later session) was telling of his experience in adjusting losses resulting from the destruction of his fine store by fire, when the following questions were asked him by President C. W. Conn, who was in the chair:

Mr. Conn: "I understood you to say, Mr. Carter, that your office and price book had been destroyed. How did you get your prices to complete your stock sheets?"

Mr. Carter: "Why, we took Hardware and Metal, and filled in the prices from its Current Market Quotations."

Mr. Conn: "One of your valuable assets, then, is Hardware and Metal?"

Mr. Carter: "Yes, it is our Hardware Bible."

The Sprayer Familiar to Farmers

Consistent and persistent advertising in the farm publications has made the name of "Spramotor" widely and favorably known to farmers. Why not turn this reputation to your advantage by offering the

Spramotor
It isn't a SPRAMOTOR unless we made it.

to your customers? Besides the liberal profit, there is also the knowledge that you are handling an article that you can honestly recommend and that you know will give satisfaction. The reputation that the Spramotor bears among farmers is going to help you to make sales. Our special dealer proposition will interest you. May we send you particulars?

Made in Canada—No duty to pay.

Spramotors Limited, 2822 King St., London, Canada
or Spramotors Limited, 2922 Erie St., Buffalo, N.Y.

WINNING THE BUYER'S FAVOR

THE best possible buyer is not made an actual buyer at a single step. It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising. Under ordinary conditions it should not be expected to do more.

For Your Customers Who Own Sheep

Nothing could be a better purchase this season of high and rising prices for wool than a

STEWART Shearing Machine

It takes the wool off evenly and quickly all over, and secures the longest staple, which brings top prices.

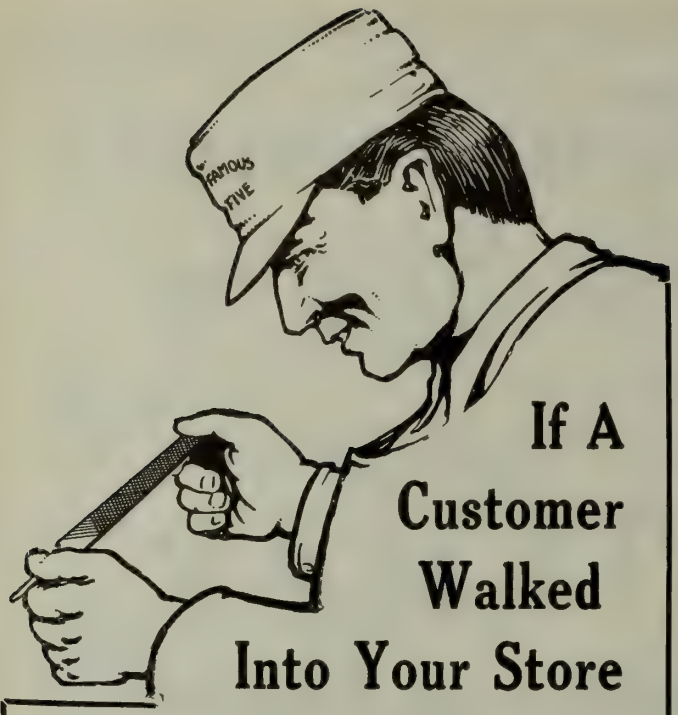
The Stewart No. 9 Shearing Machine

sells to the user in Canada at only $14 25

Every sale carries a good and satisfactory profit to you

ORDER FROM YOUR JOBBER

Chicago Flexible Shaft Co. 250 Ontario St. **Chicago**



If A Customer Walked Into Your Store

and asked for a file, what would you give him?

Any one of the following five will ensure his future custom:

KEARNEY & FOOT
GREAT WESTERN
AMERICAN
ARCADE
GLOBE

(Made in Canada)

They are Canada's favorites—controlling 90 per cent. of the demand.

Millions are used yearly, and the demand is increasing — due, in a large measure to our educative advertising campaign—teaching your customers the economy of discarding a file when it has reached its "inefficient" point.

Remind your customers that after a certain point in the life of a file, time is wasted in its use, and the work suffers.

We're helping you. It only remains for you to stock the files with the big demand.

Nicholson File Company

Port Hope *(Jobbers Everywhere)* **Ontario**

Stanley Tools

Stanley Nail Sets

¶ Made of a high grade of tool steel. Both ends hardened and oil tempered. Specially well knurled, giving the workman a feeling of security as to "grip." ¶ The point that comes into contact with the nail is "cupped" and the edges nicely rounded. Made in a variety of sizes four inches long.

¶ These are packed in attractive display boxes and every tool sold means a satisfied customer.

¶ You should have them in stock. They will prove themselves sellers.

STABLE BRUSHES

THAT STAND LOTS OF HARD WORK.

Take a Keystone Dandy Brush—a solid, one-piece hardwood back, well filled with good, tough material, and fastened with steel wire—and you will have a brush you can proudly recommend. You will find your customers insisting on a Keystone Stable Brush or Broom the second time. There's a reason.

WRITE FOR PRICES, ETC., TO

STEVENS-HEPNER CO., Limited
Port Elgin, Ontario

Get prices and information about the "Nugget" Broom and the rest of the famous Keystone Brand Brooms and Brushes.

Making Your Store Stand Out

This happens to be Plymouth, Mass., but as far as one could tell here it might be almost any town. Imagine for the moment it's **your** town.

Call one of these stores **your** store. Outwardly they are all much alike (as most stores are). How can you make yours stand out from the rest?

A distinctive store front will help, by attracting the public's eye. But you want to influence its **mind** —the place where all sales are made.

In short, you want to make people turn **instinctively** to your store when in need of certain lines of goods—and to do this not just once or twice, but **invariably.**

Isn't it true that the only things which will accomplish this result are superior goods, superior values, and superior service?

We believe that it is, and in other ads., following this one at intervals of every other week, we shall show the working out of this principle as applied to rope.

Make Your Local Advertising Pull More Business

Hundreds of Canadian hardwaremen are making their local advertising, their circulars and booklets pull more business for them, by using small electros to brighten up the reading matter.

We can supply you, just the same as we have these other hardwaremen, with these electros, at the small cost of 15c each. Every cut is mounted on wood ready for use when it leaves our office.

A few of the many electros we have in our assortment are shown on this page and if you wish sheets showing our complete list, drop us a card and sheets will be sent at once.

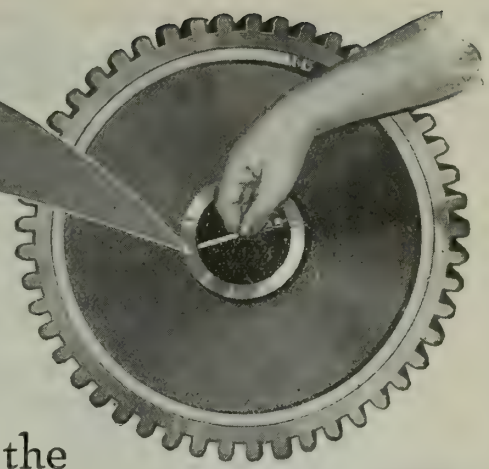
Fits



THE best machinist is the one who can caliper his fits so accurately the jobs never come back for refitting. This means the machinist must place great dependence upon his instruments. Therefore, the best machinists go to the store where tools and instruments of highest quality and greatest accuracy are sold.

Starrett Tools

and Instruments of Precision

are absolutely true and are designed for quick, easy adjustment.

For example—the Starrett quick adjusting micrometer can be instantly opened or closed to any point within its capacity. This saves time and combines speed with accuracy. Starrett Tools are well known as standard by all expert machinists and engineers.

We deal direct with Hardware Stores. Write for our Free Catalog No. 20-MA prices and discounts.

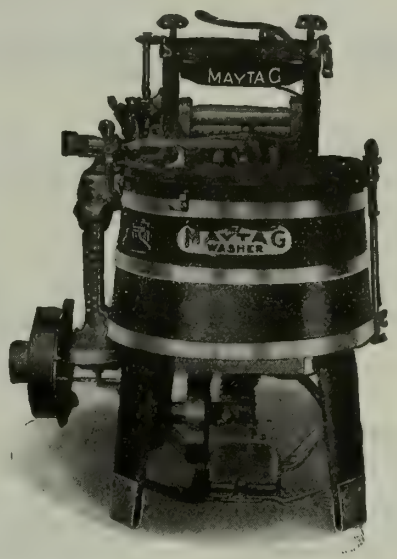
The Maytag Multi-Motor Washer

Announcement Extraordinary!



What the Maytag Multi-Motor Washer Will Do

It operates the washer and wringer. It will operate the sewing machine, churn, cream separator, food chopper—or any group of small machines—that do not require more than ½ H.P.

Now Ready! Something entirely new! Looks good—"makes good"—sells on sight! Every woman wants one! No competition! Only Multi-Motor Washer on the market!

The secret is in the light, powerful, compact little motor that is mounted right on the washer—burns gasoline, kerosene, gas or alcohol. Guaranteed for THREE YEARS.

The price fits the moderate purse, but puts a generous profit in your pocket. GET SOME OF THIS GOOD BUSINESS. Be the FIRST one to supply the demand in your town.

Now, listen! Some live, progressive dealer in your territory is going to make **BIG MONEY** handling the Maytag Multi-Motor Washer—and it might as well be **YOU.**

You positively **CAN** sell this washer and, if you don't, your competitor will—and pocket the profits. Remember, the proof of progressiveness is showing new things **FIRST.** This Washer is the same as our regular Power Washer we have sold for years, except that it has attached under the tub a ½ horse-power, 2-cycle air-cooled engine.

Will Binder Twine Go Higher?

Manufacturers Claim Probable Increase in Price Due to the Monopoly of Regulating Commission—Commission States Increased Freight Rates Largely Responsible—Dealers and Farmers Wait Expectantly

AN atmosphere of expectancy hangs over the binder twine industry and retailers and farmers find themselves wondering to what extent the thumbscrews will be applied in the shape of increased prices for binder twine. The large cordage companies have not yet made their prices for the coming season's twine but they are daily expected. The smaller ones are waiting to see what the big fellows do. They will troop along and take the cue from the leaders in the game. In the meantime a howl has gone up from the large manufacturers that the sisal fibre industry is in the hands of a grinding monopoly called the Comision Reguladora del Mercado de Henequen—"Commission to regulate the sale of sisal fibre," and against what is termed the Pan-American Commission Corporation, an organization of American bankers and members of the commission who it is stated by the binder twine manufacturers will receive a large commission on all fibre sales in addition to the interest paid the banks on loans.

Commission Makes Statement

The Comision Reguladora del Mercado de Henequen, whose offices in the United States are at 120 Broadway, New York, state that the increased cost of sisal during the past few months is due to high freight rates. A statement from the commission is to the effect that: "Although the cost of sisal to the manufacturer has increased greatly during the last few months, the advance is due altogether to the unbelievably high freight rates which shippers are now obliged to pay, owing to the tremendous demand for tonnage in the Gulf of Mexico to move the West Indian sugar crops. The net return to the planter in Yucatan, for whom the Comision Reguladora acts as selling agent, is rather diminished than increased. While the reason for higher prices is perfectly understood by all intelligent buyers, as it affects not only sisal but all other important fibres, we wish to go upon record that our steadfast aim has been and is to keep the price of sisal on a level which, while fairly remunerative to the Yucatan planter, shall not prove burdensome to the cordage and twine manufacturers, nor to the American farmer, the principal ultimate consumer of the sisal crop."

Large Crop of Sisal

While the price of the sisal fibre to the Yucatan grower is four cents per pound, the price to the manufacturer is 7 3/8 cents per pound. The Comision Reguladora states the advance is due to freight rates. The crop of sisal for the past year has been the largest on record. For the month of January this year the shipments from the port of Progreso, totaled 132,650 bales. This exceeds by 294 bales the previous best monthly record of shipments.

One of the authorities on the cordage industry states that the high freight rates are "tending to give the United States the exclusive benefit of low-priced sisal, for with sisal relatively so cheap, Europe would undoubtedly be buying sisal extensively were it not for the scarcity of vessels and the high rates." A well-known London firm says: "The Mexican sisal comparatively is the cheapest twine fibre in the world, and an advance would appear likely from 7⅝ cents, but the cost of transport to the United Kingdom is prohibitive."

The American manufacturer has succeeded in getting the ear of Congress to such an extent that a select committee of five members has been appointed by Congress from the Committee on Agriculture to make an inquiry into the binder twine industry and the sisal fibre market situation. That inquiry is now being held, having opened in Washington on February 17, and is still proceeding. At the inquiry Dr. Victor A. Rendon, American representative of the Comision Reguladora, charged two of the leading twine manufacturers with monopolizing the purchase of sisal fibre and acting against the interests of other manufacturers. Other charges were to the effect that one of the large manufacturers had threatened banks with loss of its business if they loaned money to the Comision Reguladora. The counsel of the Pan-American Commission Corporation, which was formed to lend money to the Comision Reguladora, charged that the International Harvester Company had furnished funds used by revolutionists in Yucatan against the Carranza Government. President Cyrus H. McCormick of the International Harvester Company

WATCH FOR NEXT WEEK'S ISSUE

The annual spring number of Hardware and Metal to be issued next week will be one of the best numbers, editorially, that has ever been published. The issue will contain most practical and timely information to hardwaremen in general on subjects of vital interest to the trade. In order to secure the data for articles which will appear in next week's issue, the editors of Hardware and Metal have had to travel many hundreds of miles and interview a large number of hardware merchants, and hardware manufatcurers.

A large number of entirely new and practical features will be introduced. Watch for the next issue. It is one that will be worth many dollars to you, and you will doubtless keep it on file for ready reference for many months to come.

on February 19, took occasion to deny this allegation and set forth the apparent grounds for presuming that his company had advanced money to finance the revolution. He is reported in the cordage Trade Journal as saying:

"The statement before a sub-committee of the Senate at Washington, as reported in this afternoon's despatches, that the International Harvester Company furnished money for a Yucatan revolution, is utterly untrue. It never, directly or indirectly, has had any connection with political conditions in Yucatan or anywhere else in Mexico.

"This charge grows out of the fact that the harvester company is a large purchaser of sisal, the principal product of Yucatan. Its purchases of sisal were made through Avelino Montes, a wealthy merchant of Merida, Yucatan, who purchased the sisal and paid the planters with his own funds.

"In the regular course of business, in February, 1915, Montes had made a contract for sisal for the harvester company's account, with the Yucatan Regulating Commission, the agency through which the Yucatan government controlled and still controls the sisal market.

"When only a small part of this purchase had been delivered, the government of Yucatan peremptorily notified Montes that no more sisal would be delivered on this contract unless he issued to a Yucatan government commission a letter of credit for New York funds in exchange for Yucatan currency. Under this compulsion Montes issued a letter of credit, and afterward made a payment on it in New York entirely with his own funds. None of the harvester company's money was used in the transaction. The harvester company did not know of it until some time after the transaction was completed.

"If any of Montes' money, thus advanced under the compulsion of his government, was used by the Yucatan commissioners for buying munitions it was without the knowledge and beyond the control of the harvester company."

Now that the government of Yucatan has passed to the Carranza interests the commission for the regulating of the sale of sisal has also passed to the Carranza interests. If there were any grounds for believing that one of the large companies had formerly assisted the revolutionists there may be some basis for the Carranza interests using the thumb screw as best they could. At any rate a wail is going up from the large cordage manufacturers in the United States. They have succeeded in getting Congress to take up the matter. In the meantime the American and Canadian dealers and farmers await patiently to know how much more wool is going to be taken from the already shorn lamb. Prices for binder twine are apparently due to take a jump upwards. The cordage companies have not been unmindful of educating the farmer to the expected rise. This of course is helpful in making the farmer more patient in bearing the increased load. If his eye teeth must be extracted it will do no harm to apprise him of the fact some time beforehand. He will have lived through part of the pain by the time the actual operation is applied.

It appears to be a most difficult matter to fathom. The Comision Reguladora was organized in 1912 in Yucatan for the purpose of sustaining the market for sisal fibre. Prior to that time the foreign buyers entered the country and bought the goods in an open market. When the Comision was organized it was apparently not so easy a matter for the manufacturers to get the sisal fibre at their own prices. There are assertions that the Comision Reguladaro is responsible for the increased price. On the other hand the large manufacturers are charged with monopolizing the purchase of sisal fibre. Freight rates, on the other hand, are stated to be a determining factin the increased price of sisal fibre. Whoever is to blame, this much can be depended upon, the price of binder twine for 1916 will be considerably higher than it was last year.

A Super-Chronic Condition

Merchants Experience With Customers as a Result of War Prices on Hardware Lines—Condition Which Has Developed as a Result of Constant Price Changes

Written for Hardware and Metal by G. E. Thompson.

A HARDWARE friend of mine gave me the idea of this tale when he told me of his adventure with a "shopper," that pariah of pariahs to the hardware dealer of price maintenance ideas and a growing family that is always hungry.

The Adventure

Enter the shopper—"How much you want for a gross and a half flat head bright screws?"

My friend answered, "Twenty-eight cents." "Twenty-eight cents! Come off. Why So and So (naming friend's competitor), offered them to me for twenty-one cents."

"When was that?" the dealer asked.

"Last week."

"That's a horse of another color. Screws have advanced in the last two days."

Here is where my friend should have stopped, called it off, clinched the deal, etc. Instead. "Go ask your friend now. I'll bet he won't say twenty-one cents, now."

The other took him at his word: "I'll do it." And did an about face out of the door.

He returned shortly, wrathful. "What the devil do you mean by trying to hold me up?" he cried.

"Hold you up? Didn't do anything of the kind," cried my friend indignantly. He was more direct than diplomatic. Also he was puzzled.

"Well, I got those screws for twenty-one," he exclaimed triumphantly, slamming a small package of them down on the counter. "What you got to say about it, huh?"

What He Couldn't Say

"Well, what could I say about it?" he said pathetically, in retailing the occurrence to me afterward. "As a customer he would not catch the dealer's point of view. And to tell him that a dealer should take advantage of every advance in the market to raise his own prices would simply be a confession of robbery to him. There was no use in my telling this Ishmaelite that dealers should stick together and when they got notice of an advance to boost their prices up to it and take their profit on their old stocks. It's a cinch," he added sadly, "that they have to take the losses willy, nilly, when the market drops."

"How is that?" I inquired.

"Because," he said, looking at me, pityingly, "because some son-of-a-gun is always out of the thing that drops in price, buys at the new price and so can honestly and fairly undersell the rest of us who have oodles of that particular article on the shelves and in the cellar."

"But is it fair?" I inquired.

"Is what fair?" he asked in a puzzled tone.

"Selling at an advanced price and taking an excessive profit."

The Dealer's Defence

"You're calling an innocent and legitimate practice hard names, now listen," he went on, reverting to the air of patient weariness again. "We dealers have got to stick up our prices with the market. It's not a hold up. It's only protection. It applies to nails and tin ware and cutlery and ammunition and almost every line we've got. Steel and all steel products, in other words all the articles in a hardware store to-day, are climbing like sailors. The costs in some cases are becoming almost prohibitive. The market is so erratic and the prices so high, a fellow can only afford to buy in small lots, so his high profits would only amount to a trifle in each case.

Horse Sense Insurance

"But some day," he went on, "this war will be over. The demand for munitions of war, automobiles and railroad and bridge steel and barbed wire and telephone wire and rifles and guns and shells will cease, and where will I be with my cellar and my shelves full of stuff bought at the top of the market? We're insuring against that day when we take our dinky little profit as we go along. It doesn't amount to much in each picayune case to the customer, but the sum total of all to the hardware dealer is safety. It's just good horse sense insurance against a day that is almost bound to come."

A Super Chronic Condition

"It there much of it?" I asked. "Much of the price raising, the cutting, much war or much what?" he said impatiently.

"Much of this price-cutting?" I particularized.

"The woods are full of it. They've always been. But now it's simply fearful. In ordinary times it's a chronic condition of the trade. Now its super chronic. It keeps a fellow busy skipping to his cost book these days so as not to be retailing goods at a price less than the manufacturer can turn them out."

I looked incredulous.

"Fact," he said. "Look what cutting has done on any one of a score of lines. If I had any cutlery bought in 1914, the year of the smash up, which I haven't," he said regretfully, "I could sell it for less than it's going to the jobbers to-day for.

I jogged his memory. "You were saying there's a lot of price-cutting now?"

A War Baby

"Oh, yes." And then he added. "But I shouldn't call it price-cutting. It really isn't. It's a lack of price maintenance that verges on the criminal. It's commercial suicide. It's sacrificing a general success to a particular sale. It's a rotten condition in the State of Denmark. We bump into it every day. It's a war baby. A condition created by this war, although the material for it was laying there in a nascent condition all the time. Not a day goes by but what customers come in here asking for prices and then flooring us with quotations of lower ones made by some other dealer. They won't do straight buying any more. They slop about amongst the price peddlers before they'll buy."

"Why look at nails," he exclaimed indignantly, so indignantly and so dramatically in fact, that I involuntarily glanced about nervously, as though "Nails" had just risen from his grave for me to look at him.

"Look at the way they've advanced in price. By leaps and bounds, and every time a fresh mix-up, more lobsters passing up their opportunities and selling high-priced goods at low old prices. It's such a great opportunity and they're passing it up."

"Don't you think that the example of men like you in holding out against the practice will stop it finally?" I asked.

"Ye-es, I suppose so," he said doubtfully, and looked at me oddly.

"A Fool There Was."

I rushed on. "It's a dead moral certainty. You may lose a little custom at first. But, you won't lose it all, for all your customers aren't shoppers. And eventually the other dealers will come to their milk when they see what they are missing in the way of profits—the cream of the business — the easiest, softest money they can possibly make. Why, they'll be grateful to you for holding 'em to it, for setting the example," I declared, carried away by my enthusiasm.

"Uhuh," the dealer said.

"Well, what did you do then?" I asked.

"What did I do what, when?"

The question made me dizzy, but I squared up to it.

The Climax

"When the fellow told you he got the screws for twenty-one cents from your competitor? Did you tell him how it was?"

"No. There was no use. Beyond tell-

LAST MINUTE PRICE CHANGES

In addition to the exceptionally large number of important price changes announced in Hardware and Metal's weekly market reports elsewhere in this issue, a number of further changes have taken place just before the issue is due to go on the press. The changes are as follows: Wire nails have advanced 25c per 100 lbs. and quotations are now as follows: Toronto, $3.40 per keg; Montreal, $3.45 per keg; London, $3.40 per keg; Collingwood and Owen Sound, $3.45 per keg. Net prices on annealed and cut hay baling wire, f.o.b. Toronto, London, Hamilton and Montreal have been issued as follows: No. 9, $4.15 per 100 lbs.; No. 10, $4.10; No. 11, $4.15; Nos. 12 and 13, $4.26; No. 13½, $4.36; No. 14, $4.51; No. 15, $4.77. Stove pipe wire, No. 18, is now quoted at $4.75 per 100 lbs.; No. 19, $5 per 100 lbs. Hay wire in coils is now quoted per 100 lbs. as follows: No. 13, $3.50; No. 14, $3.55; No. 15, $3.65. Smooth steel wire Nos. 0 to 9, is now quoted at $3.60 base. Wire bale ties, single loop, have been advanced to the following prices: No. 12, $3.90; No. 13, $4; No. 13½, $4.05; No. 14, $4.15; No. 15, $4.35; No. 16, $4.60. Fence staples have also advanced and the new quotations for Toronto, Montreal, London and Hamilton are as follows: Galvanized staples, 100-lb. kegs, $4.65; 25-lb. boxes, $4.90, per 100 lbs. Bright staples, 100-lb. kegs, $3.80 per 100 lbs; 25-lb. boxes, $4.05 per 100 lbs.

One point worthy of note in the many price changes reported during the past few weeks is the tremendous increase in the cost of many small hardware lines which retail over the counter for 5c and 10c. Very few in the trade appear to realize the importance of the price changes on many of these lines. Take, for instance, carpet tacks, which have advanced 20 per cent. again this week. From time immemorial retailers have sold packages of ten and twelve ounce carpet or cut tacks at five cents each—in fact, in some cases they have often been sold at 3 and 4 cents per package. Under present costs, ten-oz. tinned carpet tacks cost the retailer 53c per dozen net; 12-oz. tinned cost 63c per dozen net. Cut tacks, 10-oz., now cost 48c per doz. net; 12-oz. cost 56c per dozen net. Blued carpet tacks in the 10 oz. size cost 45c per dozen, while 12-oz. tacks cost 54c per dozen.

If the retailer wishes to make a profit it will be necessary to advance the retail prices of tacks and also other lines which for many years past have been popular sellers at a nickel.

ing him that the other dealer hadn't advanced with the market, I said nothing. He went away thinking I'm one of the original and only forty thieves. There was no use in abusing my competitor."

"'Be as wise as a serpent and harmless as a dove,' the Bible says, you know."

"No, I fight the devil with fire. Beat 'em at their own game.

"Here!" he called to the boy. "Bring me the last cost order sheet." Then, "Look at this."

I looked and read: "From date until further notice, all advances on all goods in this store are to be disregarded. Original costs only will be considered in making prices."

He had the grace to blush as I handed it back to him.

"The spirit is willing," he said apologetically.

I thought of all his pretty speeches. "Yes! But the flesh is weak."

The Cap Stone of the War

A Trade War of Tariff Walls the Certain Outcome of Present Struggle—An Accentuation of National and Racial Characteristics and a Discrimination Directed Against Central European Trade Agents in Particular and Foreigners in General

PUBLIC governing bodies are already beginning to promote activities that will insure the eventful victory of British Imperial trade in this great struggle. In particular precautions are to be taken against the activities of the commercial agents of the Central European Powers.

Sir Richard Burbidge, managing director of Harrods, London, has this to say about a tentative plan that would meet the requirements of the situation:

"The only way to beat the Germans, is to put a prohibitive tariff on German and Austrian goods that compete with those we make at home or whose manufacture we are now developing. A prohibitive tariff on foreign dyes would do more to stimulate the British dyeing industry than any other measure imaginable.

"I would have all foreign articles of luxury heavily taxed. 'Make the foreigner pay' would be my motto. It is possible that we may have to pay a little more for things, but the tariffs will go to relieve the heavy rates and they will tend to keep trade in the country and maintain employment, so that so far from having any cause for grumbling, the average man, realising the facts of the situation, will be only too thankful. Even if we pay more for a thing, the great point is that the money will remain in the country and circulate there, so that the community will have the benefit of it.

"Tax All Foreigners"

"Tax the German and the Austrian in particular, but tax all foreigners who send us goods which we can equally as well produce at home at a reasonable price. We have been obliged to buy abroad by the constant underselling of the foreigner. First we only bought 25 per cent. of our commodities abroad, then it grew until it became 50 per cent. and 60%, and it was impossible to do without these imports because the public would have the cheaper article irrespective of its origin. If there was a 6s. German-made bag side by side with a 7s. 6d. English-made bag, the customer would say, 'I will have the 6s. bag,.

"The remedy is clear. It is to tax the German so that he cannot undersell the English manufacturer by means of his rebates and his system of running his factory day and night, which allows, of course, of cheaper production. The German manufacturer is helped to undermine the British manufacturer's trade. We had evidence before the Tariff Commission that iron in Germany was sent out to be sold at £2 10s. per ton less than the home price.

"Encourage the British manufacturer and it will not be found that he is wanting in enterprise. But he must have security for his capital. It is no use his laying down expensive machinery if the next month he finds the market flooded with imitations of his manufactures at cheaper prices than he can sell them. How often have we found this happen! One has only to quote the instances of Birmingham jewellery imitated in Germany and sold here for 25 per cent. less.

"In the coming trade war we must see that German goods bear the mark of origin. In the past we have been rather lax on this score. We have seen that the boxes were stamped 'Made in Germany', but we never took the care that we should have done that the articles themselves were so stamped. In the future there must be no possibility of such negligence occurring. Let people see that mark, 'Made in Germany,' and if they have lost a near and a dear relative in the war, or if they are as keenly patriotic as we expect, they will shun those articles. It will be almost a matter of conscience with them not to have anything to do with them.

"I can tell you what Harrods' plans are in this matter. Whether the Government proposes to put a tariff on German goods or not, and whether they are cheaper or not, our buyers will have orders after the war to buy only from British manufacturers and from manufacturers in the Allied countries. Where purchases are made in neutral countries it will be their business to see that there is not the slightest suspicion of the goods being of German origin.

"Already we are opening up negotiations with, and sending buyers to America and Canada, and in due course they will go further afield, to Russia, for instance. I am sure we shall be able to do without Germany.

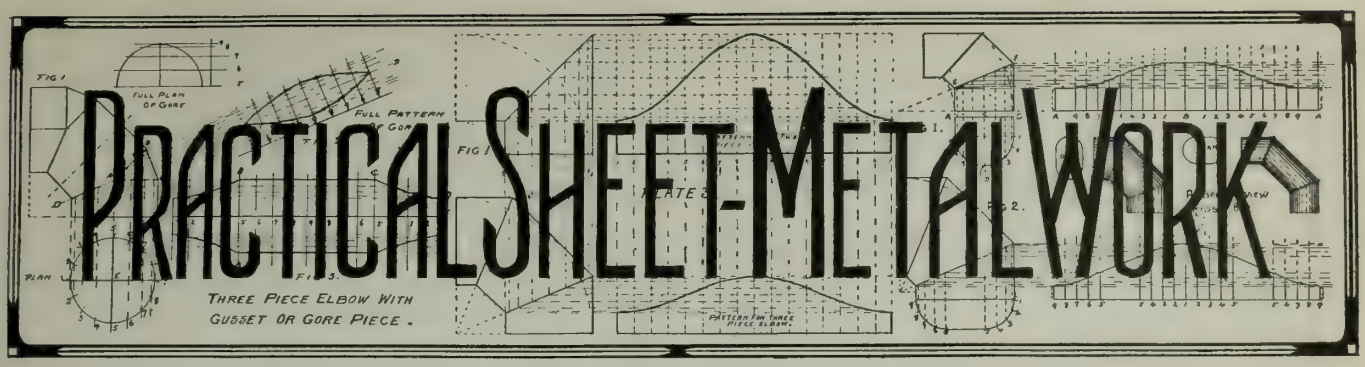
"While I would tax the foreigner I would relieve some of the commodities which we get from our Colonies and Dependencies; tea, for instance, with its 100 per cent. duty—and we still speak of 'the free breakfast table'! In fact, I would give a preference to everything that comes from our Dominions.

Improve Our Consulates

"It is possible that the German might come over and start business here, despairing of competing against our tariff wall. In that case I would have some special rating put on him. He must not be allowed to work side by side with the Englishman, his enemy, on equal terms.

"In the coming trade war I would have our Consulate system improved. I would have them run on commercial, not exclusively on diplomatic and social lines. One further point. I see it is suggested that the Continental trip is a temptation to buyers for English houses to go abroad to make their purchases. That is not the case with us; indeed, quite the reverse. We have the utmost difficulty in persuading our buyers to go abroad. They have been inclined to buy from the agencies established here.

"The Continental trip may be a holiday for the buyers of firms who let them go away for a week and don't mind what they do, but in the case of Harrods I can assure you it is no holiday, for we have our own house in Paris to which our buyers visiting there report every day. Usually when they are making purchases they are accompanied by a member of the Paris branch."



BY THOMAS STANFIELD

Article 7.

TO the sheet metal worker of a few years' experience there are many ways, short cuts, etc., by which certain fittings may be made without actually developing a pattern, but all such wrinkles must needs be obtained by long experience. The making of a T-piece, such as described in Fig. 1, can be cut from two pieces of pipe, and many a man who could make a T in the way mentioned may not even be able to lay out a pattern for this same fitting.

To develop such a pattern, first determine the diameter, the length of pipe and T branch, and draw an elevation as shown at A B C D E F G H J.

Next draw a plan. In this case only the plan is shown of the pipe and full plan of the branch.

Divide the half plan into an equal number of parts, as shown, 1, 2, 3, 4, 5, 6, 7. Then from 4, 5, 6 draw perpendicular lines until the mitre lines E F G are intersected.

Now extend lines A B and C D horizontally to any convenient distance, until the two stretchout lines are drawn, and transfer the measurements on plan to line C D on stretchout line, Fig. 2, beginning in the centre of the stretchout line with 1, 2, 3, etc., to 7 to the right and left respectively. Next draw a number of perpendicular lines from these figures mentioned, until all are completed, as described in Fig. 2. A B C D in Fig. 2 represents the amount of sheet metal required. The opening for the branch must now be developed.

From the mitres E F G, in Fig. 1, draw dotted lines from each point of intersection until the full plan has been cut, as well as all the perpendicular lines shown in Fig. 2. The points where these horizontal lines cut the perpendicular lines require to be connected, as shown by the solid curved lines. The shaded portion describes the pattern of the opening.

To develop the pattern for the branch, Fig. 3, another stretchout line is first drawn by extending line H J and also the dotted lines which cut the mitre line E F. Next transfer the stretchout measurements to line H J, Fig. 3, in the same manner as in Fig. 2, 1, 2, 3, 4, 5, 6, 7, etc., and from these measurements draw a number of lines parallel to each other, cutting the perpendicular lines as vari-

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, MARCH 11, 1916 No. 11

BUREAU OF INDUSTRIAL AND EXPORT INFORMATION.

FOR some time past the Department of Trade and Commerce has been contemplating the establishment of a Bureau of Practical Commercial Export Intelligence. This would include the selection, by department representatives, from outside countries, of such articles of import into those countries as might be manufactured in Canada. These articles would be tabulated and displayed at a central depot where they could be seen and examined by Canadian manufacturers. Information with regard to the material from which the articles are made, the market price in countries from which they come, cost of transport from Canada, and all other information which would enable Canadian manufacturers to decide whether they could profitably enter into competition with other producing countries for the markets indicated. The displays of articles will be exhibited from time to time in some of the larger Canadian cities so that greater facility could be given to their examination by manufacturers and their manufacturing experts.

The first move will be made with respect to toys, including dolls, and an exhibition will be held in Toronto in the very near future. The date has not yet been decided but will be announced next week. The object of the first exhibition is to make a sample showing of such toys as have been formerly imported from Germany, toys now being made in Canada, and possibly samples of toys now being made by the Japanese. The idea is to direct the attention of toy-makers and buyers, and also financial men to the possibility of increasing the production of such articles in Canada.

This will be the initial step towards what the department hopes to extend into a continued and permanent representation of industrial products which find vogue in overseas countries, and which it appears possible might be made by manufacturers in this country. A conference of those interested will be held at Toronto on March 28, when papers will be read, some addresses given, and a general interchange of opinions had with reference to possibilities and prospects. Details regarding the exhibition and the dates on which it will be held will appear in next week's issue of HARDWARE AND METAL.

THE PASSING OF A PERSONALITY

THE late Frank A. Child, whose death occurred so suddenly and so recently in Cochrane, Ont., was a hardwareman of the new school, thirty-five years of age, young enough to have retained the enthusiasm of youth that withal was tempered with the matured and considered judgment of maturer years.

It was this unbounded enthusiasm for his chosen career of hardware merchandising that enabled him to bring to his work a vivid play of keen imagination, an original viewpoint and a broad-minded appreciation of the ideas of others that resulted in a multiplicity of ideas being brought to bear on the problems of his business.

It was probably this same enthusiasm of his that inspired in his staff that quality of co-operation that was so noticeably a part of the atmosphere of his store. Mutual confidence based on this co-operation and the free interchange and play of ideas between the individual members appeared to be the keynote of the organization.

Mr. Child was particularly enthusiastic about the benefits of co-operation within the trade as exemplified in trade associations, trade journals, etc. In the course of a recent interview HARDWARE AND METAL had with him, he cited case after case of improved ideas of merchandising that he had picked up during his attendance at conventions, as a result of keeping on friendly terms with and visiting other hardware stores and through close and consistent trade journal reading. In this connection he referred to HARDWARE AND METAL as his store Bible and dwelt at length upon the tips he gained from it in addition to the more solid market news. He pointed out several features of display in his store that were copied directly from those of other dealers in other cities, and was both modest enough to credit them

with the idea and broad-minded enough to adopt it to his own use. And to an exposition of these ideas, as he explained them that day, HARDWARE AND METAL plans later to devote some space in its columns.

In his passing the trade at large loses a true friend who exemplified in his person the advantages of a generous character that saw good in all and that seeing it, believed in a free interchange of the spirit, and so practised it in his life.

ONTARIO TO LEVY NEW WAR TAXES.

THE new war taxes to be levied by the Ontario government, as announced in the budget speech of Provincial Treasurer McGarry this week, will not come as a surprise to the residents of the Province. That a tax on amusements would come sooner or later, was expected in all quarters. Some surprise was exhibited a year ago when places of amusements and their patrons were not taxed under the provisions of the war measures introduced at that time.

It had been urged that a tax be placed on the nickel industry of the Province but the Provincial Treasurer stated that no action would be taken in this respect until the report of the special commission appointed by the Hon. Mr. Ferguson, Minister of Lands, Forests and Mines, had been presented, the Government would take no action with regard to this form of taxation.

The Government will in future exact a 25 per cent. penalty charge on all estates undervalued for succession duties. The 25 per cent. penalty will be imposed upon the portions which are not voluntarily disclosed. The Ontario war tax of a mill on the dollar on all assessable property, introduced last year will continue during the coming year. No action will be taken at the present time towards imposing an income tax, but this may come at a later date after the Government of Ontario meets the representatives of the municipalities, and an agreement is reached whereby the Government will have a clear field for the taxation of incomes.

Legislation will be brought in, imposing upon race tracks doing business in Ontario a tax of $1,250 per day, as against a former tax of $500 per day. Six race tracks will be affected and it is expected that $100,000 per year revenue will be received from this source, instead of $40,000 as formerly.

All persons attending theatres, moving picture houses, amusement halls, concert halls, circuses, baseball parks, skating rinks, or other places which come under the category, will be taxed one cent on each admission. This tax may be increased to 25 cents by an order-in-council Based on a tax of 1 cent on each ticket it is expected that $350,000 will be obtained from this source in a year. It is probable that at a further date an arrangement will be made whereby the tax on tickets will be graduated according to the value of the ticket. It has been suggested that a ten per cent. tax on all tickets would be a fair tax to impose. Entertainments of a philanthropic, religious and patriotic character are excluded.

Mr. McGarry stated that the expenditure on development work in Northern Ontario for the year had been $689,000, and that the Government considered the work being done was too important to be stopped, even in war time, owing to the fact that it was preparing that great country for the settlement that would come after the war.

THE BASIS OF SALARIES

THE chief business of most of us is inducing others to see eye to eye with us. This is the great work of the preacher, the editor, the teacher, the advertiser, the salesman. It does not matter much what our special work or vocation may be: we will find, on an examination of it, that it consists in overcoming the will of others, by imposing on them dominantly our wills.

Where the resistance is greatest, there the quality of the attacking will must of necessity be great. Money rewards are usually commensurate with the quality and amount of will-power required to overcome opposed wills. The man earning $15, it will be found as a general thing, is not meeting with a great resistance on the part of others in his relations to them. The man earning $30 a week is receiving this larger sum, as a general thing, because he is performing a work in the doing of which more resistance has to be overcome. The man earning $100 a week has a still harder task—a task of overcoming inertia in others, which may be called passive or negative resistance; or actual positive, directed resistance of a mental sort.

Retailers, wholesalers, traveling salesmen and manufacturers need to perceive these truths, and when they consent to them, they will the better perceive the true nature of their work and obligations. They will see, for one thing, that if the quality and amount of the resistance encountered by salesmen are greater than the force which salesmen can oppose, it is not much use endeavoring to urge these salesmen to get the order; or put it in more common language, there is no use in sending a boy to do a man's work.

Also, if a salesman finds himself earning $25 a week for himself instead of $50 or $100, he will usually find that he is not opposing to the resistance encountered by him in the development of his business a greater force.

Strength to overcome can and should and must be developed. Salesmanship is an art or science that can be learned or acquired, but it requires deliberate and faithful study.

WHAT OTHER PAPERS SAY

THE SPRING CATALOGUE

From Uxbridge Times

This is the season of the year when the big retail houses issue their spring catalogues. In order to secure the minimum of postal charges the T. Eaton Co. despatched a man to Uxbridge last week, and mailed what seemed to be a carload of catalogues from the local office. They would cover the country for 20 miles around, at the lowest parcel post rates. The postage on these catalogues was 6c each, and it is reasonably safe to say that 2,000 were mailed from here. If this is correct $120 was paid to the local office for postage alone. Add to this the enormous cost of printing the catalogues, then consider what the same firm pays for advertising in Toronto papers for this section, and see what a tremendous bill it would be. Within a radius of twenty miles from Uxbridge we estimate this firm will spend over $2,000 per annum. Is it any wonder they attract so much trade? This item would represent as much as all the merchants in Uxbridge, Sunderland and Cannington spend on advertising in any one year. It is the problem of the local merchant to offset the business going to Toronto. If the farmer or townsman is shown he can procure the same goods at home for as little money, he should patronize home stores. The local dealers help to pay the taxes, keep up the churches, and the charitable institutions of the country and towns.

ARE YOU PLANNING FOR THE FUTURE?

From Hardware Trade

In view of the market conditions on various articles in the hardware line, the above query is especially pertinent at this time.

A proper planning for the future is one which takes into consideration the fact that every time an advance in a commodity takes place, there is practically certain to also at some time come a period when a decline is due.

The pricing of merchandise at retail should always be on the basis of the re-placing, and not the original, costs. In no other way is there safety and preparedness.

Suppose, for instance, that a hardware store is so fortunate as to possess several hundred dollars' worth of merchandise which was bought on lower markets than those which prevail at the present time. The tendency with many a merchant is to give the customer the benefit as long as the supply lasts. These retailers apparently figure that this is appreciated by the consumer and results in a permanent good will.

The following out of this plan has certain dangers and disadvantages, however. Suppose such a method is carried out. Sooner or later replacing of stocks is necessary. Assume that the upward trend of the market is unchecked. The purchases are made. Before stocks are cleared the reaction sets in. Prices drop. Can you, as a merchant, then, make an appeal to your trade to buy this merchandise from you at higher than prevailing retail prices merely because you chanced to be caught "long?" That the consumers would turn a deaf ear to your plea is very evident.

That being the case, why not take into consideration the fact that merchandise is worth, not what it may have cost you at the time of purchase, but what it would cost you to replace on the basis of prevailing markets.

By adopting this plan, following the market in its course, upward or downward as the case may be, you are giving both yourself and your customer an entirely square deal.

Better yet, you are taking your profits when they are offered, and are laying aside a balance to help take care of the losses which may be necessary in the case of the bottom falling out of the market a little later at a time when your stocks are filled with merchandise purchased at the replacing price schedules.

Planning for the future properly means taking all these different elements and possibilities fully into consideration.

GROWTH OF PETROLEUM-REFINING INDUSTRY

From Paint, Oil and Drug Review

The value of the annual production of the petroleum-refining industry of the country, according to the preliminary report by the United States Bureau of the Census, increased 67.2 per cent. between 1909 and 1914. The total cost of the crude petroleum increased 64 per cent. between those years.

The production of naphthas and lighter products, chiefly gasoline, increased from 10,806,550 barrels in 1909 to 29,200,764 barrels in 1914, while the value increased from $39,771,959 to $121,919,307. The output of fuel oils increased from 34,034,577 barrels, valued at $36,462,883, to 74,669,821 barrels, valued at $84,017,916. Illuminating oils show an increase in quantity from 33,495,798 barrels, valued at $94,547,010, to 38,705,496 barrels, valued at $96,806,452, or an increase of 11.7 per cent. in quantity and of 2.4 per cent. in value. On the other hand, lubricating oils show a decrease in quantity with an increase in value, from 10,745,885 barrels, valued at $38,884,236, to 10,348,521 barrels, valued at $55,812,120. All other products, including residuum or tar, greases, paraffin wax, asphalt and subsidiary and by-products, increased in value from $27,331,571 to $37,805,610, or by 38.2 per cent.

The gasoline product of the petroleum refineries does not include casing-head gasoline condensed from natural gas at the gas wells. The total gasoline production, including casing-head gasoline, was 24,711,565 barrels of 50 gallons, or 1,235,578,250 gallons.

KILLING THE GOLDEN EGG GOOSE

From American Artisan

Every now and then some scheme is being presented to retail hardware dealers and other merchants by which they are promised all sorts of benefits—if they join—and the promoters of the scheme usually manage to extract a considerable amount of money from dealers who go into the scheme, either because they imagine that the proposition is practical or because they are afraid that their competitor may take it up and possibly get an advantage over them in some way.

A recent example of these schemes was the now defunct United Retail Merchants' Association, promoted by one J. E. Foster who operated in Michigan. He induced seventy-two merchants in as many cities and towns in Michigan to join his association, each paying $125 as an entrance fee. In return they were to receive billboard and newspaper publicity and coupons to be furnished to give to the trade.

"Unfortunately" the promoter was not as smooth as some others and already his little scheme has been nipped in the bud by the United States authorities who have sent him to Leavenworth for five years under the charge of using the mails to defraud.

Here is an instance where a promoter whose plan was so crude as to get him into Uncle Sam's toils on a mail fraud charge, but there are other schemes hardly less propitious for the retailers who join them that are promoted by men a little more smooth than this man Foster.

It will generally be found that the man who claims to be working for the good of the retail merchant and who wants the merchant to put up all the cash is doing nothing but playing his own little game at the expense of the merchant, and because such a man works his deal so as to avoid such troubles as this, is no sign that he is giving the retailers all the benefits he claims.

One of the ways of stopping these self-styled benefactors of the retailer is to have their representative submit the proposition to the officers or the proper committee of the local commercial organization. If the plan is meritorious, there can be no valid objection to do so, and unless the representative in question is willing to go before such a body and explain every detail of his "plan" the individual retailer who is approached by him will profit by letting it alone. In nine cases out of ten, the committee will be able to pick out the weak spot, and, of course, no retailer who knows his business will go against the advice of the committee.

There are no geese to-day that lay golden eggs, nor are there any short cuts to success in retailing.

RICHES OF THE UNITED STATES

From Financial Post

At a gathering of bankers, financiers and men prominent in the industrial and financial life of the United States, a social gathering, discussion turned on the future of the United States. One of the speakers, whose opinion is always worthy of respect, remarked that to-day the United States was richer than any other two countries in the world.

This is very encouraging to Canada. These riches must seek investment; Canada and South America are to-day the greatest fields for profitable development. We can get our share of this money if we go after it in the right way.

It will not be easy money. Our competitors in the South are now putting forth strenuous efforts to secure money and settlers. They have aroused a nation-wide interest, and hundreds of United States business and financial representatives are touring South America at present.

* * *

THE NEW ORDER

From London Daily News

We doubt whether there was ever a time when the minds of men were more receptive than now, when they felt more widely and deeply the failure of the old dispensations of human governance and when they looked so eagerly for a new relevation of society based on more spiritual foundations. The old order has collapsed and can never be refashioned. The new order that is coming to birth may not satisfy the orthodox, but if it is to be better than the old it will have to be permeated with the essence of Christianity. That essence, it has been well said, "lies neither in dogma, nor yet in abnormally holy life, but in faith in an unseen world, in doing one's duty, in speaking the truth, in finding the true life rather in others than in oneself, and in the certain hope that he who loses his life on these behalfs finds more than he has

THE JUNIOR CLERK'S PAGE

Why the Clerk Grinned

The Evils of Following Rule of Thumb Methods—A Switching of Policy that Followed an Explanation of Systematized System.

I WAS sent out on an assignment lately that developed into a boomerang, with the reverse English on the hitting part. My editor, who is an enterprising sort of an individual, heard of a chap down East who was upsetting all precedent in the hardware trade via the route of a soft and dictatorial job in his father's store.

The editor informed me that this young man was really and truly an original, and that mine should be the honor of writing him up for the example of the rising generation of young Canada.

We talked over the interview beforehand and laid out a series of questions that I should ask young hopeful, the better to illustrate the ponderosity of his ideas.

I suppose it's because I've been to the wars that my disposition has been ruined. I seem to see things from a critical standpoint. Things that are not necessary seem superfluous.

That's how it was this time. I was sent out to do a little boosting, instead of which I got out my rake and simply wallowed in muck. Here's what happened.

When I Hit the Town

I walked up the street of a typical country town, alternate cement and board walks, that popped and snapped with the frost of early morning, hitching rocks, the teams of early farmer shoppers, and all the other appurtenances of semi-urban country life. When I reached the store, I paused for a moment in undisguised admiration of the window. It was full of punch, arrested the attention, contained a good selling argument, and, last of all, excited the curiosity of the dullest imagination. So I opened the door and stepped in.

Mr. —— in?" I inquired.

The Clerk Grinned

"In his office at the back of the store," the clerk replied, nodding towards the rear. Afterward I thought I remembered the faintest suspicion of a grin on his well-schooled countenance. As I passed down the length of the store, I had an opportunity to admire the well laid out interior arrangements of lighting, shelves and show cases. Everything as neat as a pin, I cried to myself. "At last," as my imagination leapt to the pleasant task before it, I was mothering an idea. I smelt copy. A live wire.

Not to be Disturbed

The office lay at the end of the lane of show cases I was traversing. I came to an abrupt halt, amazed, as my eye swept the forbidding exterior of it. It was the ordinary plain deal office, with a large window on each side of the door. It was the door that fascinated me and frightened me. The window of it was covered with a heavy green blind, on the top of which in large white letters were the words: "NOT TO BE DISTURBED."

I could not help wondering what my thoughts would have been if I had been a farmer with a plethoric bank roll, and an easy order for fencing that required the head man's attention. I retraced my steps. But the spring was out of them.

The clerk gave me a commiserating glance. "Not to be disturbed?" I repeatedly dumbly.

"Oh, I guess so," he said. "Wait a minute."

He went back, knocked on the green door, and, after a respectful moment, entered. He was out and back almost immediately. "It's all right. Go in."

I felt like a parrot. "Not to be disturbed." I pulled my shoulders up. I feared I might say it when I arrived on the other side of the green. I knocked. A voice said, "Come in." I did so, and took in my surroundings. In an office ordinary, except for its immaculate neatness and quantity of filing cabinets and card indexes on the desk, sat a worn-looking stenographer scribbling away at her notes. At the desk was the central figure of the little setting, a keen-looking young man, eye-glasses, hair brushed back, small black tooth brush moustache. He finished the sentence he was dictating while I stood uncomfortably, painfully conscious of my intrusion.

"What can I do for you?" he asked quite politely—withall a trifle brusquely.

I explained. He nodded curtly to the girl, and she picked up her notes and faded into the oblivion of her corner nothingness. By this time it was not my reportorial instinct, but my detective instinct that was aroused. I not only smelt a rat. I saw a trap. So I elaborated on my brief explanation and was careful to omit a mention of any desire to get material for a story on "Up-to-date Merchandising." However, he was pleased with the attention of my call and showed it, although it was all done with a tenseness that suggested he was fearfully busy.

The Phone Rang.

We talked of various things—crops, business, collections, and so forth. The telephone bell rang. He pretended not to hear. It rang again. He glanced sharply at the girl. She came to hasty life, walked over to his very elbow where the telephone was sitting, and picked it up. "Hello. Yes." She passed it to him and dropped back into her corner again. He held a brief conversation of no apparent importance with an air of "Time is money" and great terseness.

Part of the System

In the pause I plucked up courage to mention my temerity at disturbing him while he was so busy. He smiled complacently at the green door and remarked, "That's part of my system. I believe in efficiency. It's to avoid being bothered by people in my dictation hour. I have a certain length of time each day apportioned off for dictation, advertising, sales planning and so on. Great system. Like to see how my silent door keeper works?" I assented and he led the way to the door which he half opened. Then grasping the handle of what appeared to be a roll such as is used on school blackboards, he directed me to step outside. Before my astonished gaze he began to wind "Not to be disturbed" disappeared, to be followed by "OUT," "SALES FORCE INSIDE," "CUSTOMERS' TROUBLE HOUR," "TRAVELING MEN'S PERIOD," and others of a like nature, until I felt dizzy. He asked me what I thought of it. I told him something else. Then we went into the store and I found that the bright look of it was only the altar upon which he had sacrificed the vitality of the busi-

(Continued on page 44.)

EVENTS IN THE TRADE

Business Changes

Tara, Ont.—McDonald & Watson, hardware, have sold out to Walker & Merriman.

Tilbury, Ont.—W. L. Wilson has purchased the tinsmithing business of Crawford's, Ltd.

Sarnia, Ont.—A. K. Dickson of Seaforth has taken over the McAllister hardware store and stock.

Yorkton, Sask.—Chas. Beck, hardware and furniture, has sold the furniture department to W. H. Moore.

Berlin, Ont.—Geo. G. Bucher & Son, have purchased the hardware business of L. B. Snyder, 57 King street, east.

Medicine Hat, Alta.—Robert A. Parker, deputy grand master, I.O.O.F., of Alberta, has become vice-president of the Bow Island Hardware Co. The firm are now erecting a new building at Winnifred, Alta., and it is said that branches will be opened in a number of surrounding towns.

Fire Losses

Thessalon, Ont.—Chas. Shoultz, whose store was damaged by fire on Feb. 29, is having the building repaired, and expects to open again for business in the near future.

New Firms

Regina, Sask.—In the near future a new hardware store will be opened here under the name of the Wood Hardware Co., under the management of D. F. Bolster.

Moose Jaw, Sask.—James Alves, of Regina, late of the C. W. Sherwood Co., was a recent business visitor here in connection with the proposed opening of a new department store in the Douglas Block.

Industrial

Montreal, Que.—The asphalt refining plant, which the Imperial Oil Co. propose establishing here, will be located at Point aux Trembles. Work has already started on the foundations for the refinery, which is expected to cost nearly $1,500,000.

Opening New Branches

Fergus, Ont.—Beatty Bros., Ltd., have opened branches at St. John, N.B., and Montreal, Que. N. J. Cabeldu is in charge of the St. John branch at 167-169 Marsh Road. Mr. Cabeldu travelled for a number of years for the company in the Martime Provinces. The Quebec branch at Rue Selby, Westmount, Montreal, will be under the management of Mr. Walbridge, who has represented the company for the past year in Quebec Province.

Obituary

St. John, N.B.—The death occurred here of W. D. Baskin, dealer in groceries and hardware.

Belleville, Ont.—The death occurred at Narberth, Penn., of John M. Chislett, who was for 19 years an employee of John Walker, hardware merchant.

Paris, Ont.—The death occurred here of Thomas A. Martin, a member of the hardware firm of Cassady & Martin, Stratford, Ont. Mr. Martin came to his home here about two months ago, and while here caught a severe cold which developed into pneumonia. He had been in the hardware and plumbing business in Stratford for about six months.

Death of Frank Child

Cochrane, Ont.—Frank A. Child, hardware merchant of Cochrane and Matheson, well known in the hardware trade, died here after a brief illness from pneumonia. Mr. Child, who was the son of the late Aaron Child and Mrs. Child of London, Ont., was a pioneer in the north country, where he settled eight years ago. Before going to Cochrane, Mr. Child was with the Rice Lewis Co., Toronto. He was past president of the Cochrane Board of Trade, a member of Blue Lodge Chapter Preceptory and Rameses Temple. Mr. Child was born in Windsor 35 years ago, but moved to Toronto with his parents when he was a lad. Mr. Child was interviewed in his store at Cochrane last week by a member of Hardware and Metal's editorial staff, and appeared to be in the best of health.

The funeral took place on Wednesday at London, Ont. The late Mr. Child is survived by his wife and one daughter.

Personal

H. Lendon, Leamington, Ont., was a visitor at the Toronto office of Hardware and Metal during the week.

H. K. Howell, Howell Hardware Co., Goderich, was a visitor at the Toronto office of Hardware and Metal during the week.

Oliver Chown, of E. Chown & Sons, Kingston, Ont., wholesale hardware, has been in Toronto during the week visiting the trade.

E. E. Lyday, of the Maytag Co., Ltd., makers of power and hand-washing machines, Winnipeg, has been on a visit to the States, and is expected back from Los Angeles about the middle of the month.

H. H. Williams, formerly of Burgess & Williams, Brandon, Man., is now occupying the position of major with the Second Pioneer Regiment in England. Major Williams left here on November 18th as senior captain of the Second Pioneers.

D. H. McDougall, the newly appointed general manager of the Dominion Steel Corporation, has in various capacities been associated with the fortunes of the Dominion Coal Company and the Dominion Steel Company since the very beginning of the enterprise, of which he is now the operating head. In 1910 Mr. McDougall was appointed assistant general manager of the Dominion Coal Company and later general manager.

Elected to Boards of Trade

C. C. Lee, Goderich, Ont., has been elected to the council of the board of trade.

J. E. Robins, Watrous, Sask., has been elected to the council of the board of trade.

Ontario Incorporations

M. Weichel & Son, has been incorporated at Toronto, with a capital of $100,000 to take over the business of M. Weichel & Sons, hardware merchants of Elmira, Ont.

Dominion Incorporations

The Frost Steel & Wire Co., has been incorporated at Ottawa with a capital of $6,000,000 to manufacture iron and steel products, fences, gates, posts, etc. Head office to be situated at Hamilton. Incorporators, H. L. Frost, A. Leroy and C. A. Smith.

German Steel Output Increases

Returns of the Association of German Iron and Steel Manufacturers showed a slight decrease in output during December as compared with November of some 30,000 tons. The December total was 1,162,895 tons while November was 1,192,682 tons. For the last five months in 1915 the steel output of Germany has almost doubled that produced in the last five months of 1914. From August to December last year the total production was 5,903,916 tons. For the same period in 1914 the total was 3,949,560 tons.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

150. **Wire.**—A New York firm desires to get into touch with Canadian manufacturers of nail wire for shipment to Argentina.

152. **Enamelled Ware.**—A London firm wishes to obtain for export only (outside of the United Kingdom) the agency of a Canadian manufacturer of enamelled ware.

154. **Liquid Resin.**—A Leeds firm asks to be placed in touch with Canadian shippers of liquid resin

155. **Toys, Dolls, Electrical Supplies, etc.**—A London firm is anxious to secure sole agencies for Canadian manufacturers of toys (metal and other), dolls, electrical supplies, leather goods (especially ladies' frame bags), and other goods suitable for the English market.

157. **Iron and Steel.**—A Birmingham commission merchant with large connection wishes to represent a manufacturer of iron and steel.

158. **Machinery and Tools.**—A firm in Birmingham is open to represent manufacturers of all kinds of machinery and tools suitable for the British market.

163. **Asbestos.**—A large importing house in Glasgow wishes to receive quotations for asbestos cement slates and sheets.

164. **Asbestos.**—A Glasgow firm is in the market to receive prices for from 50 to 100 tons of No. 2 crude asbestos; also a supply of spinning fibre.

165. **Barytes.** — A Glasgow house would like to receive samples of barytes for paint manufacture, and to purchase in lots of 100 tons or so.

166. **Minerals.**—A New York firm asks for quotations for export prices f.o.b. Vancouver for the following:—

2 tons ferro-vanadium, as near 50 per cent. as possible, but in no case less than 40 per cent. purity guaranteed.

10 tons ferro-tungsten, 75 to 85 per cent.

300 tons ferro-silicon, 75 per cent.

300 tons ferro-silicon, 45 per cent.

200 tons ferro-silicon, 25 per cent.

CONGESTION OF FREIGHT

One of the big problems of the manufacturers' agents in this country is to get the orders from their customers in sufficient time to allow them to be filled at the time they are required. G. Reginald Marshall, of George A. Marshall Company, 70 Lombard Street, Toronto, has just returned from a trip to the Old Land, where he has been looking after orders with the view to expediting shipment if at all possible.

"The congestion of traffic in the Old Land is something unprecedented," said Mr. Marshall. "At Liverpool I saw eighteen miles of freight trains waiting on the railway lines and on sidings for transhipment to the ocean freighters. They were being moved along slowly and disposed of. But for the volume of freight to be handled it was impossible to move them with any great rapidity. First of all, there is the dearth in shipping facilities, due to the requirements of the Government in carrying munitions. Then there is a shortage of men to handle the freight, occasioned by the drains of the war. There is even a shortage of men to fill the places in the shops. Some ten thousand skilled workmen were brought back from France and placed in the shops. They wore the khaki at their work the same as they would if they were in the trenches. They were needed at home and the Government brought them back.

"It is not surprising that it takes a considerable time to receive hardware goods and tool steel in this country after they have been ordered. Dealers who are contemplating placing an order should count on placing it at least six months before the time they will actually need the goods. If they can place the order a year ahead of time they will stand less chance of being disappointed.

"Business in the hardware trade is very good this year. It would be much better if the goods could be secured with less delay. During the year 1915 merchants only ordered the very necessary articles. It is necessary for them to replenish their stocks this year."

George A. Marshall, senior member of the firm, is of the opinion that prices of English hardware articles will not decrease materially even when the war is ended. He thinks the field which British goods will secure in preference to German articles will continue to keep the demand for British-made goods at a high level.

Jas. Hossack, sales manager of the Lufkin Rule Co., of Canada, who is only kept from the front by the urgent calls at home, and who, with his wife has been doing some splendid work for our boys in the trenches, was accosted the other evening by a recruiting sergeant.

"You ought to be a soldier," said the recruiting sergeant.

"What!" replied Mr. Hossack with assumed horror in his face and voice, "Join the army when there is a war on, never!"

CATALOGUES AND BOOKLETS

Boeckh Bros. Catalogue

The Boeckh Bros. Company, Ltd., Toronto, have issued to the trade a very complete Catalogue, covering all lines of brushes, brooms, etc., manufactured by them.

This catalogue is very complete, giving accurate descriptions, measurements as regards the width of brush and length of bristles, etc., a feature which the company claims, makes it decidedly easy for the dealer to order by mail, and in addition to this it means security as the goods supplied are always kept up to the standard and are not varied according to market conditions to avoid the altering of prices.

Irwin Bit Catalogue

The Irwin Auger Bit Company, Wilmington, Ohio, represented by T. Mortimer, 64 Wellington St. W., Toronto, has issued catalogue No. 10 consisting of 32 pages featuring Irwin bits, including auger bits, car bits, augers, dowel bits, sugar tree bits, ship augers, rafting augers, nut augers, boring machine bits, etc. The catalogue is attractively illustrated and gives some interesting information regarding the speed of the bit, filing bits, selection of bits, etc. Copies of the catalogue wil be supplied on request.

Homes Beautiful and Healthful

The Alabastine Co., Paris, Ont., has for distribution to the trade a handsome 36 page booklet entitled "Homes beautiful and healthful". The volume is dedicated to and sent out in an effort to assist all who have taken up the work of brightening life within the home. Copies will be supplied on request.

NEW INCORPORATIONS

The Eastern Factories, United, Ltd., has been incorporated at Ottawa with a capital of $50,000 to carry on business as dealers in goods, hardware and general merchandise at Hamilton, Ont.

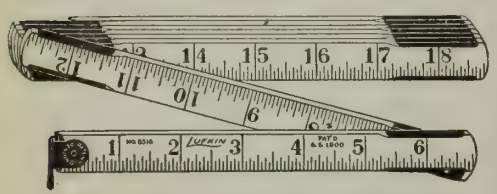
The Zenith Coal & Steel Products, Ltd., has been incorporated at Ottawa with a capital of $35,000 to carry on the business of steel metals, chemicals, and machinery merchants and manufacturers. Head office to be situated at Montreal, Que.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

ATTACHMENT FOR SPRING JOINT WOOD RULES

Just the thing, the makers claim, for taking measurements out of arms' reach, and handy for taking almost any measurement. A small, substantial hook fit-



Lufkin Rule with attachment

ted to the first end of spring joint rules, so attached that with but a twist of the finger will fold up and remain flush with the edge of the rule, making it in appearance and for use same as ordinary rules without hook. Zero point falls at inside of hook when open, at extreme end of rule same as common rules when hook is closed.

This new article has just been brought out by the Lufkin Rule Company of Canada, Windsor, Ont.

NEW WATER AND WEATHER-PROOF BATTERIES

The principal objection to dry batteries, it is claimed by the Canadian Carbon Co., Ltd., 96 West King Street, Toronto, are the difficulties encountered incident to atmospheric and temperature influences upon them. To overcome this difficulty the company claims it has succeeded in insulating the active part of the battery, namely, the zinc electrode, in such manner as to minimize the retarding effect upon the electrolyte, due to low temperature, and to restrain the violent chemical action caused by extremely high temperature.

It is well known that dry batteries decrease in efficiency through age, and this, it is said, is mostly due to the excitation caused by the transference of energy between the negative and positive poles, this being principally due to superfluous moisture in the atmosphere affecting the zinc container.

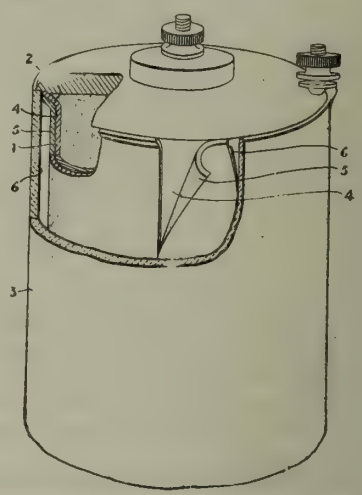
The makers of the new battery, therefore, had to provide for a novel formation of the cell and to arrange for a covering thereon, whereby the cell is insulated against the effect of changes in atmospheric conditions.

It will be noted on the illustration showing a sectional perspective view of the cell that the zinc cup is formed with an outwardly flaring upper edge. This flaring edge engages the upper edge of the outside container, and as the inner member is spaced centrally within the outer container, a surrounding dead air space is provided for. The cell itself is being coated with a special adhesive varnish, which is impervious to moisture, thus forming an insulating coating. A jacket formed of a sheet of asbestos or some similar heat insulating material is placed around the zinc container, while the varnish coat is still sticky, thus providing a protecting covering, which is a poor conductor of heat, consequently the cell retains a comparatively uniform temperature, outside changes of temperature affecting it but slowly. The electrolytic paste and the depolarizing compound inside of the cell are also protected to a very great extent against atmospheric changes.

The outer carton is made up with a water-resisting material, or is lined with paraffine, or coated inside with some other waterproof material. When the cell is now placed within the external

Canadian Carbon Co. New Battery

cover, the top is sealed so that the sealing wax extends over the top of the flanged zinc container, effectively closing the air space surrounding the cell, and consequently forming an insulating jacket, said to be very effective against changes in temperature. The seal extending beyond the top edge of the inner container effectively secures the outer carton to the cell, and thus forms a unit, from which the outer carton cannot be



Sectional perspective view of cell

removed and replaced in a fraudulent manner.

To secure the bottom cap of the outer carton and to make such carton positively waterproof, the ordinary fibre bottom cap is being replaced by a black japanned metal bottom which, on the inside of the carton, is insulated from the zinc cup by a specially-formed, paraffined, paper cap.

THE UBIQUITOUS AUTO

The Horseless Age estimates 3,114,000 automobiles in the world, of which 2,400,000 are in the United States, or 77 per cent. The number of motor cars outside of the United States, 714,000, is less than registered in the States of New York, Ohio, California and Iowa. The United States, with 276,690 cars; France third, with 98,400; Germany fourth, with 71,450; and Canada fifth, with 55,650. Range of gasoline price is 22c in the United States, 26c in Great Britain, and 40c to 50c in Continental Europe.

J. E. Ewards & Sons, Ltd., has been incorporated at Toronto with a capital of $50,000 to manufacture leather goods, harness, etc., at Toronto. Ont.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

There have been many adjustments in prices of manufactured goods during the week, and a large number of important price changes are recorded in the market reports which follow. Other important changes will follow in the near future. An advance of 25 cents per 100 lbs. in the price of wire nails took place on Thursday. Various lines of wire goods have also advanced. The many advances which are recorded this week, startling though they may be, will not come unexpectedly to those who have been following HARDWARE AND METAL'S market reports. There are few, if any changes, which have not been predicted in these columns. Among the many lines which have advanced in price during the week are: Wire nails, smooth steel wire, galvanized and bright fence staples, wire bale ties, range boilers, baths, stove pipe wire, hay wire in coils, sinks, roofing nails, annealed and cut hay baling wire, black and galvanized iron pipe, nipples, angles, Norway iron, lead pipe, copperine, pressed spikes, seine twine, tire bolts, stove bolts, coppered rivets, tacks, cheap rim locks and knobs, food choppers, carpenters' tools, rules, levels, saws, shot, bar iron, steel, cow chains, tie-out chains, wrenches, padlocks, soldering coppers, lawn mowers. A new list will shortly be issued on all lines of auger bits. Advances are expected on sand and emery paper, cloth, steel and copper sheets and other lines. Paints are firm at the recent advanced prices, but oil and turpentine are weaker.

MONTREAL

MONTREAL, March 10.— Although there has been some diminution of the volume of trade since the opening of the month, conditions are all that could be expected in the hardware trade and reports generally indicate that the months of January and February were not only remarkable for their improvement over last year but equal to the good showing of two years ago. The slight lull may be due to the fact that the trade has been buying freely on the rising market and thus covered the bulk of spring needs or to the effect on sentiment of month-end settlements.

There have been many further adjustments in prices throughout the higher manufactured goods and these seem likely to continue. In the metals and heavy products changes have not been quite so general as for some weeks past but this is not taken as any indication of improvement so far as manufactured steel and iron are concerned. In fact it is stated that prices now being asked for certain goods for delivery during the final quarter of the year are such that if there is not a reaction in the interval quotations may rise to a level which will make the increases to date look comparatively small; as much as one hundred per cent. is indicated as within the range of possibility on some items.

In the metals lead has been the only active feature, scoring a further advance of half a cent and closing strong. Generally the metals have been very unsettled by the action of the British Government in issuing an order prohibiting trading—an order which was rescinded after a couple of days.

Advances are recorded on: black and galvanized wrought iron pipe, nipples, angles, Norway iron, lead pipe, copperine, pressed spokes, stove bolts, tire bolts, food choppers, padlocks, Trimo and Coes wrenches, iron rivets, seine cotton twine, sheathing, ready roofing, carpet and tarred felt, etc., lawn mowers and certain old metals. New list prices for augur bits and sand and emery papers will be issued immediately. Advances on pig iron, manufactured steel and copper sheets may be expected.

Tin unchanged and Firm.—The situation in the lead market is unsettled but generally strong on the advances scored last week. These advances were only a fraction of those recorded in New York, where there were short supplies for spot needs but it was quite evident that the situation there was an artificial one and that a reaction would follow. This reaction came with the announcement that the British Government would restrict the trading in metals—even though tin was made an exception—but was checked when London announced that the order referred to had been rescinded. The net decline since last report has been 1½c and, although this does not yet reduce the level to the usual relation with Montreal, it is likely that there will be further advances here unless the outlook changes. Increased production in the East and reduced consumption in Europe are given as factors offsetting the heavy deliveries to the United States. Montreal quotations 49½c-50c—firm.

Copper Continues Steady.—The local situation in copper continues steady and firm on the high level reached two weeks ago following a strong upward movement of several weeks. The developments in the London Markets, where the British Government cancelled the rights to trade in copper and then rescinded the order, have had rather an unsettling effect in the United States and the net result has been a fractional decline. Montreal quotation: 32c-32½c firm and steady.

Lead is Still Higher.—Lead is the feature metal of the week and quotations show a continuation of the advance which has been in progress for several weeks. A gain of an additional half cent is recorded and the market shows indications of advancing further. In the United States the Trust has made an advance of 10 cents since last report At the same time such is the situation that second hands are getting from 10 cents to as high as 35 cents above this level for spot and for March and April delivery New York hears from London that the British authorities have been making an effort to keep the price of lead down but that these efforts have had practically no effect. This is interesting in view of the action of the government in ordering a discontinuance of trading in metals and then rescinding the order. Montreal quotation: 9¼c-9½c—strong and advancing.

Spelter Somewhat Easier.—Although there is no general change in the quotations for spelter in this market, the outside influences indicate somewhat easier conditions. Following the temporary suspension of trading under order of the British Government, London resumed at a considerable decline, and this has been reflected in New York where quotations are off fractionally over a cent since last report. In fact New York has been affected to a greater extent than London, owing to the high costs of transportation; buyers are showing a disposition to stand off to await developments. Montreal quotations: 24c-24½c—tone somewhat easier.

Antimony Steady.—On the new basis established last week, antimony has re-

mained steady and generally firm under the influence of outside markets. New York reports conditions as being dull but firm and showing an advance of about 1 cent since last report. Cables from China and Japan indicate a very strong market in the East and none of the importers are showing any disposition to cut prices. Montreal quotation: 48c—firm.

Aluminum Nominal—It is practically impossible to give a definite quotation on aluminum, the best information being that the market is nominal around 60 cents. New York continues to show advances but these have but little effect in ordinary domestic trades where the prices have long been practically prohibitive.

Sheet zinc is steady at recent high quotations: casks 31 cents and part casks 31½ cents.

Solder Firm and Steady.—On the recent advances solder is firm and steady under the influence of the market for tin and other metals entering into the manufacture thereof. The following quotations about cover the local situation: Commercial half-and-half 29c-30c; strictly half-and-half 31c-32c.

Iron and Steel Situation. — Increasing difficulty in securing deliveries of manufactured steel and iron is the dominant feature of the situation as regards pipe, tubes, sheets, plates and other products of these metals. Dealers state that they are placing orders for the third quarter of the present year for certain steel products at prices which indicate that the increases which have already been made will be comparatively small—as high as one hundred per cent and over, may be looked for on some items unless there is a marked reaction in the interval. Under such conditions the recent heavy buying appears to have been a matter of good judgment on the part of the trade in following the trend of the market and the forecasts given. Looking to the future the indications are certainly that there will be further advances, but it must not be forgotten that the market is already abnormally high and that there may be a point in relation to the ordinary domestic consumption where increasing cost will interfere with consumption. Advances on pig iron have been a recent feature of the American situation and these may be expected to have an influence in Canada.

Pipe Again Advancing.—Still another advance on black and galvanized wrought iron pipe has been made and new prices are shown in a panel elsewhere.

Sheets and Plates.—Such products as black and galvanized sheets, tin and terne plates, boiler tubes and plates are all very strong and, in view of the situation existing in the steel and iron markets, advances are to be expected as the deliveries of more costly materials are made from the mills.

Pipe Fittings.—Pipe fittings are being affected by the general upward movement of metal products. A recent change has been made by which the discount on nipples has been reduced from 77½ per cent. to 72½ per cent.

Angles.—Angles have been affected in the upward movement of metal products. Generally speaking the base quotation may now be regarded as about $3.50, as compared with $2.75 formerly. However, there is some spread in prices as between different firms in relation to stocks on hand.

Bar Iron Strong.—The local quotation of $2.45 for bar iron is comparatively low, considering the conditions prevailing, and, following the upward movement of pig iron in the United States, higher prices are to be looked for.

Norway Iron Higher. — Further advances have recently been made on Norway iron. One local wholesale house quotes $6.25 as compared with a former price of $5.85.

Sheet Copper. — Although there has been no general advance on copper sheets, the market is very strong and the increase has only been checked by a slightly easier sentiment during the past few days. However, should the high position of copper continue advances are to be looked for.

Lead Pipe Advances.—With the continued upward movement of the lead market, an advance of 1 cent has been made on lead pipe. The new quotations are $11.50 for lead pipe and $12.50 for lead waste pipe.

Lead Sheets Strong.—Although it is only a week since a material advance on lead sheets was made, the continued upward movement of the metal makes the situation very strong and still higher prices are to be looked for unless there is a reaction.

Copperine is Higher.—New and higher prices for copperine have been announced as the result of the advances in raw materials. New quotations are: No. 2, 25c; No. 1 30c; finest 35c; tough 45c.

Situation in Nails.—There has been no change in the base quotation for nails, which continues at $3.20 and firm. However, there has been an advance on pressed spikes of ⅝ inch diameter from $3.45 to $3.70.

In Hardware Lines.—Adjustments of general hardware lines to higher levels continue as the different manufacturers increase their prices to cover the increased cost of raw materials. The indications are that these adjustments will continue for some time, as it is doubtful if manufacturers have as yet covered the full advances which have been recorded in the different metals.

Stove and Tire Bolts.—Following the general advance on the bolt list referred to last week, there have been readjustments of the discounts on stove and tire bolts, the former being reduced from 75 per cent to 72½ per cent. and the latter from 65 per cent. to 60 per cent. This is the direct effect of the developments in the iron and steel markets.

New Tack Discount.—The new discount on tacks has gone into effect locally since last report. On the many items involved the discount is now 75 and 25 per cent. as compared with 80 and 20 per cent. formerly.

Wrenches. — In the general upward movement of quotations for tools, the discount on Trimo wrenches has been reduced from 65 per cent. to 62½ per cent., with a discount of 60 per cent. on extra parts.

New List on Augers.—An important announcement in connection with auger bits is that there will be new list prices issued for practically all standard makes. Whether this will involve a change of discounts as well is not yet known. The readjustments on many lines will cover an advance of about 10 per cent.

Builders' Hardware.—Wholesalers are still engaged in making readjustments on builders hardware of different kinds. One firm states that the advances on brass butts have been such that, whereas there was formerly a discount of 40 per cent. off list, there is now an addition of 15 per cent.

Food Choppers Higher. — Advances are being made on food choppers. The Sargent line, which are generally handled, have been put on the following basis; Number 20, $1.00; Number 22, $1.15; and Number 24, $1.75.

Coes Wrenches.—The several different quotations given for Coes knife-handled wrenches have been advanced to cover higher cost of production. The increase is about 10 per cent.

Padlocks Advance.—General advances on padlocks are being put into effect amounting to about 5 per cent. The Yale, Corbin, Eagle and other well known makes are affected.

Iron Rivets Higher.—The new discounts on iron rivets have gone into effect during the week. The allowance on rivets and burrs is now 55 per cent. as compared with 60 per cent. formerly.

Soldering Iron Quotations.—In addition to the new quotations for soldering irons by the pair given last week, prices by the single dozen irons are announced as follows: ½ pound $1.85 doz.; 1 pound $3.65 doz.; 1½ pound, $5.20 doz.; 2 pound, $6.80 doz.; 2½ pound, $8.40 doz.; 3 pound, $9.90 doz.; 4 pound, $13.20 doz.; 5 pound, $16.50 doz.; 6 pound, $18.90 doz.

Seine Cotton Higher.—A local wholesale house gives the following advanced quotations for seine cotton twine; No. 6, 35c No. 9, 31c; No. 12, 30c; No. 15, 36c; No. 29½-42, $1.00.

Roofing Materials.—General advances on roofing materials are indicated in the following new quotations:

Dry sheathing, No. 1, 54c; No. 2, 38c.
Tarred sheathing, No. 1, 56c; No. 2, 46c.
Surprise sheathing, 40c.
Resin, sized, 52c.
2-ply Ready Roofing, 95c.
3-ply Ready Roofing, $1.20.
Heavy straw, dry, $1.95.
Heavy straw, tarred, $1.95.
Carpet felt, $3.25.
Tarred felt, $2.60.
Pitch, 85c cwt.

Sand and Emery Papers.—The trade has been informed that new list prices are being announced for sand and emery papers. These will be confirmed by wholesalers in a day or so and in the meantime old quotations are being observed. There will be a considerable increase.

Lawn Mowers Advancing.—Advances of from 10 to 15 per cent. have been

made by American manufacturers of lawn mowers and it is expected that before the season is well under way there will be a readjustment of quotation of Canadian makers.

Old Materials.—Some further advances in the prices being paid for scrap metals are recorded this week: $13.75 is quoted for wrought iron No. 1 and $9.50 for No. 2 while stove plate is up $1.00 per ton to $9.50.

TORONTO

TORONTO, March 9.—The steady increase in values continues to be the predominant feature in the hardware market. A great many price changes have taken place this week. The outlook for business, particularly in the country districts, is good, and the volume of trade moving exceeds that of last year for the corresponding period. There is, however, a feeling of uncertainty in the trade on account of the abnormal situation, due to the advance in prices and slow deliveries from the manufacturers. The high cost of raw materials has caused an increase in production costs, which is reflected in the prices of finished goods. Increasing scarcity of many raw materials is also a factor in the situation, which is causing manufacturers of hardware considerable concern. Trade is also being seriously hampered by shortage of tonnage and high ocean freight rates, with little prospect of any marked improvement for some time to come. Shipments are not only being delayed, but prices of goods are being materially increased on this account.

Many More Price Changes.—As might be expected under prevailing conditions, prices on many lines of hardware continue to advance. This is especially true of iron and steel products ,which are unusually high following the steady advances which have taken place for many months past. The principal lines affected locally this week include boiler plates, nails, wire, staples, range boilers, mangles, soil pipe, wrought iron and galvanized pipe, wrought nipples, tire and stove bolts, lead pipe, bar iron, soldering coppers, logging tools, carriage and wagon hardware, gasoline and benzine, tarred felt, etc. Some lines of ready roofing have advanced, but higher prices for all brands of ready roofing are expected shortly. The shortage of rags used in the manufacture of ready roofing is unprecedented, and the conditions prevailing in the rag markets are such that ready roofing and kindred lines will be seriously affected. One of the largest factories in Canada, making all descriptions of hardware steel goods, has advised the trade by telegram that all prices have been cancelled. This is a further evidence of the acute shortage in the steel market, and is an indication of what may be expected during the year both as regards high prices and late deliveries.

Iron and Steel Situation.—There is no change in the situation, and the upward trend of prices continues with no indication that the top of the market has been reached. The mills have more orders than they can handle, and deliveries are getting further behind. Boiler plates have advanced 15c per 100 lbs., and are now quoted at $3.40, heads $3.65, and tank plates, 3-16 in., at $3.70 per 100 lbs. Boiler tubes are unchanged, but higher prices are anticipated, as an advance of $2 per ton has recently gone into effect in the States. Prices of shafting are very firm, and an advance is probable. There is a heavier demand for shafting in the States than was ever known, and deliveries are now being extended from six to eight months from date of order. Bar iron has advanced 15c, and is now quoted at $2.90 per 100 pounds, steel bars being unchanged at $3 per 100 lbs. Other products, which have been advanced in the States, and which will affect the local market, include wire products, $2 per ton; shafting, $5; spikes, $2 to $3; cold rolled strip steel, $5 per ton. These advances show the general trend of the market affecting all products at one time or another.

Montreal and Eastern List.

Pig Iron.—There is no change in the pig iron situation, and prices remain at last week's level. The market is fairly active, with an improved demand for foundry grades of pig iron.

Old Materials.—The situation in the scrap metal market is much the same as last week. A steady volume of business is reported for brass, copper and heavy melting steel; the market for these metals is firm and quotations unchanged. The recent advances in the pig lead market have improved the position of old lead, and prices are a little stronger. Aluminum is also strong, but scrap zinc is weaker. Boiler plate, axles, tires, etc., have all an upward tendency, but quotations are unchanged meantime.

Metals.—An important development has taken place on the London market recently. The British Government issued regulations prohibiting speculative transactions in the various metals required in the production of war material. The object of the new order was to prevent inflation in prices, and was due to the high prices reached in all the markets. The metals in the order included, among others, copper, zinc, brass and antimony. Tin was not included in the order, as it only enters incidentally in the manufacture of munitions. If this regulation had been enforced for any length of time, it would have meant a virtual stoppage of trading operations on the London market, and would have also stopped all manipulation and speculation. At this writing, however, cable despatches state that the regulation has been rescinded, but no information is at hand as to the reason of the Government's action. The metal exchanges in London opened last Monday for trading under conditions authorized by the Minister of Munitions. Although the regulations are not in force, it indicates that the British Government intend to control prices of metals more effectively than heretofore, and the effect of this will be felt locally by less fluctuation in prices. The American market has invariably followed London, so it will be interesting to see how prices in New York are affected under the new arrangement.

Copper.—The market is unsettled, following developments in London, but quotations are unchanged. The demand for copper is still exceptionally strong, and producers are so well sold ahead that they do not find it necessary to reduce prices. Indications point to the present high level being more or less maintained for some months, as there is a possibility of the consumption increasing rather than decreasing, quotations are nominal at 30 1/2 c per pound.

Tin Firm.—The sharp advance reported last week has not been maintained, and the market has declined. As tin was the only metal not included in the British Government regulations, later rescinded, this metal will perhaps not be affected by any other restrictions on metals generally that may be imposed by the Minister of Munitions. The tin position is a good one, particularly for spot

metal. Tin is now quoted at 50c per pound.

Spelter Weaker.—The market is unsettled and weaker, being affected by the London market. There appears to be a wide difference of opinion in the trade as to what effect the action of the British Government will have on prices, and many consumers are holding back until the situation improves. Zinc ore is quoted at $100 to $120 at Joplin, Mo. Spelter has declined 2c locally, and is now being quoted at 23c per pound.

Lead Strong.—The market is strong following an advance by the Trust of $2 per ton to 6.60c New York, with the outside market at the same price. There is a scarcity of spot lead, but the demand continues good. The lead situation is good, and there is a decided upward tendency. Local quotations are firm and higher at 8¾c per pound.

Antimony.—The market is quiet and unchanged. The antimony market has been under the control of the British Government for many months, so any new regulations or restrictions would probably not affect the metal, it being already controlled. Quotations are unchanged at 48c per pound.

Aluminum.—The market is strong and metal is secure. Quotations are firm, but unchanged at 68c per pound.

Solders.—Quotations are a little higher than last week, following the advance in the tin market. Guaranteed is quoted at 28½c, and strictly at 26¾c per pound.

Iron Pipe Again Advances.—Owing to the unprecedented conditions in the iron and steel trade, makers of wrought iron pipe have again advanced prices—2 points for black and 3 points for galvanized pipe. The last advance went into effect on February 18, while the new prices were in force on March 4, making two changes in less than three weeks. Last week Hardware and Metal predicted another advance, the supposition being based on the increase in cost of raw materials. The market is very strong at the new prices, which are given in a panel elsewhere.

Bar Iron Advances.—Bar iron has taken a further advance of 15c per 100 pounds, making the price $2.90 base. Steel bars are firm and unchanged at $3 base per 100 pounds.

Boiler Plates Up Again.—Boiler plates continue on the up-grade, following advances in the United States market. The new prices are 15c per 100 lbs higher, and are as follows: Plates, ¼ to ½ in., $3.40; heads, $3.65, and tank plates, 3-16 in., $3.70 per 100 pounds.

Range Boilers Advance.—Makers of range boilers have raised their prices owing to increase in cost of production. Standard boilers, 30-gallon welded, are quoted at $7.25; Standard riveted, $7.50, and extra heavy, $10.50 each.

Soldering Coppers Up.—Owing to the increase in cost of copper, makers of soldering coppers have made a sharp advance. Soldering coppers are now quoted at 49c per pound base, as against 37c formerly.

Lead Sheet Higher.—Following the recent advance in pig lead, prices of lead sheets are higher as follows:—Sheets, 3 lbs. sq. ft., $11; 3½ lbs. sq. ft., $10.30, and 4 to 6 lbs. sq. ft., $10.75 per 100 lbs. Lead wool is quoted at 12c per pound.

Lead Pipe Advances.—As predicted in Hardware and Metal last week, prices of lead pipe have been advanced 1c per pound. In view of the high cost of pig lead, an advance in lead pipe was expected. Lead pipe is now quoted at 11½c and waste pipe at 12½c per pound, the market being very firm, but demand continues light.

Pipe Fittings.—Discount on some lines of wrought and malleable iron fittings have been lowered, and are as follows: Wrought nipples, 72½ per cent.; malleable lipped unions, 60 per cent., and plugs, 62 per cent.

Soil Pipe.—A new discount has been announced for medium and extra heavy soil pipe, up to 6 in., of 65 per cent., as against 65 and 10 per cent. formerly. Sizes 7 in. and 8 in. are unchanged at 45 per cent.

Wire Nails Advance.—A sharp advance of 25c has been made in wire nails, bringing the price up to $3.40 per keg base. This is due to the scarcity and high cost of wire rods, prices of which are purely nominal, as some makers have not been selling in the open market except to regular customers, for several months. Cut nails are quoted at $3.20 per keg base.

Wood Screws.—Prices of wood screws are unchanged, but very firm. Conditions in the trade are such that higher prices may be looked for in the near future.

Wire.—The market continues very strong, but the situation does not improve, and makers of wire are having considerable difficulty in obtaining raw materials in sufficient quantities to meet their requirements. Higher prices for wire and wire products in the near future may be expected. Smooth steel wire, No. 0-9 gauge, is quoted at $3.45 base.

Logging Tools Up Again.—Another advance of 10 per cent. has been made in logging tools, following a similar advance announced last week.

Carriage and Wagon Hardware Also.—Makers of carriage and wagon hardware have again advanced their prices 10 per cent.

Oakum Higher.—Makers of English oakum have raised their prices, but American oakums are for the present unchanged. Raw materials continue to advance, and in the case of the English oakums high freight charges have to be taken into consideration. New hemp, English, has advanced 1½c, and is quoted at 12c per pound, while U. S. Navy, English, has advanced ½c, and is quoted at 9½c per pound. All other lines are unchanged in the meantime, although higher prices may be looked for.

Binder Twine Situation.—It is expected that the new prices for binder twine will be issued very shortly. That the new prices will be considerably higher than last year's schedule is not doubted owing to the much higher cost of sisal and Manila. Quotations at present are being guaranteed; that is, while no prices are made, every manufacturer agrees to meet every other's quotations.

Ready Roofing.—A general advance in all lines of ready roofing is expected shortly, one manufacturer having already raised prices. The situation in the trade is abnormal owing to conditions prevailing in the rag markets. In normal times large quantities of rags are imported into Canada from Europe for making ready roofing. On account of the war this source of supply has been cut off, resulting in a serious shortage of rags, and consequently high prices. This shortage is unprecedented, and is seriously affecting the roofing business. Tarred felt has already advanced, and is now quoted at $2.60 per roll.

Plumbers' Goods Higher.—Prices on enameled baths, lavatories, roll rim sinks, flat rim sinks, and all other lines of enameled plumbing supplies have advanced from 5 to 10 per cent. These advances are over and above the advance which took place on January 8. The market is very firm, and prices are subject to further changes without notice.

Galvanized Sheets.—There is no improvement in the situation, and the market continues very strong. Higher prices for galvanized sheets may be expected any time, as black sheets continue to advance, and deliveries are getting more backward. The spelter situation shows no improvement, and the price is still too high to interest the galvanizing trade.

Seasonable Lines.—Bookings for summer lines, such as refrigerators, ice cream freezers, oil stoves and oil stove ovens, etc., are very satisfactory and considerably better than last season. Sap pails and spouts are moving out freely for the maple syrup season, which will be on very soon.

Utensils.—A good demand from the country trade for stock lines is reported and prices are very firm. The advance in two-pieced ware, reported last week, has been well maintained, and higher prices for other lines of ware are looked for, as cost of production is still high owing to conditions in the raw material markets.

Stove and Tire Bolts Up.—Makers of stove and tire bolts have issued new and lower discounts, which are as follows:—Stove bolts are now 72½ per cent. and tire bolts 60 per cent. The previous discount was 75 per cent. for the former and 65 per cent. for the latter.

Rope Very Firm.—The market is very firm at unchanged prices. The raw material markets continue strong, with no improvement in the situation. High freight rates are tending to keep prices up, and stocks of fibre on hand continue light. Very fair business in cordage is reported.

Mangles Advance.—Makers of mangles have advanced prices approximately 10 per cent., the new quotations being as follows:—Victor, $15.65 and Woodyatt mangles $7.25 each.

LONDON

LONDON, March 7.—Business here is fair this week. The merchants are still busy marking their spring goods, while the jobbers are busy shipping the balance of their spring bookings. There is plenty of work to keep all parties busy. Several advances in prices have been noted again this past week.

Tire bolts are up nearly 15 per cent. The new price is 60 per cent.

Stove bolts are up 10 per cent., the new price being 72½ per cent.

Iron rivets also record an advance of 10 per cent., the new prices being quoted at 55 per cent. This new price on rivets makes coppered rivets and burrs, No. 8, in 5-lb. packages assorted, 99c per keg; No. 10, $1.06 per keg.

Tacks Advance.—With an advance of 20 per cent. in the price of tacks, the new prices are quoted at 75 and 25 per cent.

Locks Go Up.—Cheap rim locks are quoted at $1.50 dozen, an advance of 5 cents. Cheap knobs, jet, porcelain and mineral, are quoted at $1.25 per dozen, an increase of 5 cents.

New Price for Food Choppers.—A new price is quoted on Gem food choppers. No. 20 is selling at $1.00 each; No. 22, $1.15 each; No. 24, $1.75 each.

Some lines of carpenter braces have advanced about 20 per cent. from recent quotations.

Rules have also advanced and are now being quoted at an advance of about 25 per cent.

Saws and Levels Go Up.—A prominent manufacture reports an advance in levels, saws and other articles of 10 per cent.

Shot is now quoted at 20 per cent. off, with extras as usual.

The price of bar iron is now quoted at $3.00 base, while bar steel is $3.15 base.

Tacks Advance.—Prices on the best selling sizes of carpet and cut tacks have made considerable advances in many instances.

Cow Chains.—New prices are quoted for immediate and future bookings at 40 and 5 per cent. The old price was 50 per cent. Tie out chains are quoted at 75 per cent.

Linseed Oil.—There has been a fair sale of this commodity during the past week, with a firmness in prices. Raw oil is quoted in 1 and 2 bbls., at $1.02 per gal.; 3 to 5 bbls., $1.01; 6 to 9 bbls., 99c. Boiled oil, 1 to 2 bbls., $1.05; 3 to 5 bbls., $1.04; 6 to 9 bbls., $1.02.

Turpentine.—There is no change in the price of this commodity during the week. In 1 bbl. lots it is quoted at 78c per Imp. gal., 2 to 4 bbl. lots, 77c; 5 gal. lots, 85c.

White Lead and Glass.—Firmness is noted in the market for these commodities. White lead is quoted in ton lots at $11.45 and in less than ton lots at $11.75. Glass, single diameter, is quoted at 30 and 10 per cent.; double diameter, 30 and 10 per cent. Cut lights, net list.

Rope Prices Hold Firm.—There are no changes in the prices of rope during the past week. Pure Manila is quoted at 21c; British Manila, 17c; African hemp, 17c; cotton 3-16, 25c, cotton ¼ and up, 24c.

Fence Wire Stationary.—Prices for wire fence remain unchanged from the last quotations. Barb is selling at $3.85; No. 9 galvanized, $3.50; No. 12, $3.65; No. 13, $3.75; No. 9 coil spring, $3.55. No. 10 O and A., $3.61; No. 11 O. and A., $3.67; No. 12 O. and A., $3.75; No. 14 hay baling, $3.80.

Screen Wire.—Painted screen wire in 100-foot rolls is selling at $1.87½; in 50-foot rolls, $1.92½; bronze wire in rolls is selling at 8 cents per square foot, in less than rolls, 9c.

Harvest Tools.—These articles are quoted at 40 and 12½ per cent. Spades and shovels are selling at 50 and 10 per cent. for firsts; 50 per cent for seconds; 40 per cent for fourths.

WINNIPEG

WINNIPEG, March 9.—Winnipeg and the West are again covered with a heavy mantle of snow as a result of a storm which started Monday morning. At the time of writing, it is somewhat uncertain just what effect the storm will have on traffic, but it certainly looks as though there will be numerous delays in the train service, which will affect both incoming and outgoing freight shipments.

Business Good.—All the jobbers report business as being excellent, and they have all increased their staffs considerably with a view to handling orders promptly. It is undoubtedly true that March will far surpass the two preceding months of the year, and arrangements to cope with the situation have been made.

Added Auto Accessories.—A great number of the jobbers report that they have added a line of automobile accessories to their stock, and express surprise at the amount of business which is turned in through the retail merchants. This would seem to indicate that retailers throughout the country are taking hold of the accessory business and making a leader of same. There is no doubt that the hardware store is the proper channel through which this trade should pass.

Paints Higher.—Spring orders of paint now being shipped show that the various lines are in good demand.

There has been an advance in the price of prepared paints, which went into effect March 1. On most lines this amounts to 10c per gallon, but in certain colors it is as high as 20c. In the case of white paint, the advance is 15c. This is the first change in Winnipeg since last June. There are no changes in varnishes. On account of advances in the price of raw material, the price of decorators lead has been put up, quotations now being for less than tons. 12.60 per cwt. Turpentine is quoted 90c per gallon. There has been a drop of six cents per gallon in linseed oil, but the market is firm, although no advances are expected at the moment. Quotations are—raw 1.05 per gal. and boiled 1.08.

Big Sales of Ammunition.—The jobbers advise that the amount of ammunition now being specified on spring orders would indicate that big sales of 22 rifles are to be expected. Some of the manufacturers are sending interesting literature to the various dealers in Western Canada, pointing out the harm done by the little gopher, and how the 22 rifle plays a great part in ridding the country of this pest.

Barb Wire Higher.—Revised prices have been made this week on barbed wire, and according to latest reports further advances may be expected in the near future. Reports from the States would indicate that the mills are sold out for months ahead, and that there is a serious shortage of supplies. The prices now being quoted are as follows:

Barb Wire	Ft. Wm.	Winnipeg
Lyman Galvd.	$3.40	$3.65 spool
Glidden	3.25	3.50
Baker	3.20	3.45
Lyman Galvd. Catch-weights	4.00	4.30 per 100

Nails Higher.—Another line on which further increases may be expected is wire nails. Nail rods are very scarce, and makers in the U.S. are raising their prices nearly every week or ten days. Canadian makers are sure to follow all advances in the U.S. and it is hard to see at this time just how high prices score.

Paints Higher.—Revised prices have been put into effect on paints. House paint is now being quoted as high as $2.50 per gallon, and floor paint as high as $2.15 per gallon. The various other lines of mixed paints along with colors in oil colors in Japan show corresponding increases.

White lead is also higher, and the price to-day in ton lots is $12.30 with an extra 30c per cwt. for smaller quantities.

Paris Green Up.—Paris green has taken a decided jump and prices below represent to-day's quotations.
Paris Green in packages 1 lb. full cases 44c lb.; Less, 44½c lb.; ½lb. Full cases 46c lb.; Less 46½c lb.

Stoves Higher.—Stoves and ranges have also come in for an increase in price. Manufacturers kept the price down as long as their old contracts for raw material held good, but in renewing their contracts at much higher figures, it is only too evident that the increased prices quoted to-day are justified.

Shot Higher.—Drop and chilled shot have taken a further jump and quotations below, represent the present market for this commodity.

Shot 3 A to Dust, $13.00 per 100 lbs.; Chilled, $14.50 per 100 lbs.; S S G to 4 $13.80 per 100 lbs.; 28 Ball, $14.20 per 100 lbs.;

WEEKLY PAINT DEPARTMENT

Start Clean Up Campaign Now

Merchants Should Take an Early Interest in Movement for Betterment of Their Home Town—Clean Up and Paint Up Movement Growing in Favor.

HOW about "Clean Up and Paint Up" week in your town? For the past three years these innovations have met with great success throughout Canada and the United States. They have resulted in many cases in a cleaner and better, a healthier and more attractive town in which to live. It is expected that many more towns will enter into the project this year. The war may still be in progress but it will help people to dispel the sombre aspects of the struggle if they set about making their homes and home town a brighter and more wholesome place in which to make their abode. It is fitting that people should not forget to make things as pleasant as possible.

Now that spring is about here it is well that merchants who are interested in this movement from a pecuniary standpoint should not lag behind in using every means in their power to get the movement under way. It is a thing which will benefit their home town and at the same time be a great benefit to their business. Most of all it will result in a betterment of civic conditions, and most hardwaremen and paint dealers are big enough to make this the prime object of the movement. If incidentally they reap some financial benefit they will take that as a secondary consideration. From the financial side alone it is well worth while for them to take an active interest in the movement.

Movement Began In St. Louis

The headquarters of the movement on this continent is at St. Louis, Mo. In 1912, Allen W. Clark conceived the idea of having a national Clean Up and Paint Up week. It was tried out and proved to be an immediate success. It has now grown to national proportions and each year sees the idea extending still further afield. It is the purpose of the movement to create in the public mind a spirit of enthusiasm and a sense of intelligent co-operation. The active co-operation of the town or city authorities should be enlisted in all departments. Everybody, both old and young, should be asked to lend a hand to clean up property, indoors and outdoors. There is a great need for a systematic clean-up each year. A trip through any town or village or city shows many streets, yards, lanes and open places littered with waste and rubbish. This rubbish is both unsightly and unsanitary. If these are the conditions outdoors in full view, what must be the conditions indoors in cellars, attics, passageways in factories, tenement houses and other places.

How to Organize

Talk the matter over with a half dozen people who will be interested in the project. They need to be boosters—live members of the community. When you get them together agree upon a meeting to take place within a day or two at which it is arranged for other representative men and interests of the town to be present. The mayor and the newspaper men of the town are among the first that you should see are present. The city and school and health officials, the civic and business and women's clubs and the big business and manufacturing concerns should all be represented. These things should be done:

1. When the meeting is called to order a chairman and secretary should be named and the purposes of the meeting outlined.

2. Give some description of the movement as it has grown and developed into an international one.

3. See to it that a resolution is introduced and adopted to start at once a Clean Up and Paint Up campaign.

4. Organize into a permanent organization for the work. Select a president and other officers. There should be enough vice-presidents to include one from every co-operating organization or interest. The new president should be instructed to name all the various chairmen of committees within a day or two after the meeting. These along with the officers should constitute the executive committee. Committees which should be named include: Finance, publicity, to provide wagons for removal of rubbish, to provide clean street cans, one to interest the school children and one to interest all merchants to feature Clean Up and Paint Up articles in their advertisements and displays.

5. Adopt a resolution requesting the mayor or the Board of Health to proclaim the opening of the campaign for the cleaning, sanitation and beautification of the city.

6. Adjourn, after fixing a date for a future meeting at which all these chairmen and members of their committees will attend to plan their work.

Get Many to Work

It should be the aim to get as many men and women as possible interested in the work. Each should be made feel that they have some particular share and interest in the work. Their town is going to be made a better place in which to live and they should take a very active interest in the work. The mistake of heaping too much work on one willing enthusiast should not be made. The more general the interest and the larger the number who take a part in the work the bigger will be the success. This is a work which appeals to people. Their sense of civic pride is aroused. When every person is bent on making a clean-up job the spirit will become infectious. Trees could well be planted in suitable places in the streets. People should also be encouraged to plant flowers and keep their lawns in good shape to harmonize with the brighter, cleaner houses. The time is opportune to be thinking about this very important matter. As soon as the conditions are favorable no time should be lost in getting it under way.

BRITAIN IS CLOSELY REGULATING SHIPPING

Importing Large Quantities of Flaxseed

by a licensing committee to be appointed by the Board of Trade.

It will be seen that the British Government is thoroughly supervising the shipping business. Steamships will only be allowed to carry freight of the most particular importance. Large quantities of flaxseed are being imported by the government for the purpose of extracting the glycerine. The exports of flaxseed from Argentine into Europe from the first of January up to the middle of last month were 750,000 bushels more than for the same period last year. The exports from India show an increase of 431,000 bushels in the same period. This increased demand for flaxseed in the making of glycerine will also be another factor to cause the price of linseed oil to be firmer.

World's Mercantile Marine

On the outbreak of war Lloyd's Register of Shipping gave the merchant tonnage of the world as 49,089,552 tons, divided among 30,836 vessels. Of this number 24,444 were steamers with a gross tonnage of 45,403,877 tons, and 6,392 were sailing vessels of 3,685,675 tons. Among the belligerent countries this tonnage was distributed as follows:

	Steamers	Gross tons
Great Britain and Colonies.	10,123	20,523,706
Germany	2,090	5,134,720
France	1,025	1,922,286
Austria-Hungary	433	1,052,346
Russia	747	851,949
Belgium	173	341,025
Japan	1,103	1,078,386
Italy	637	1,480,893
	16,331	32,334,893

The steam tonnage owned in the countries at war represents 71 per cent. of the total steam fleet of the world. With the outbreak of war the German and Austrian steam shipping aggregating 6,187,066 tons, was immediately cut off. It has been estimated that since the war began 1,200,000 tons gross of German shipping seized at sea or detained in port by the Allies have been restored to traffic. About 1,000,000 tons of Allied and neutral shipping have been sunk by the German navy. After making the proper allowances the total loss of tonnage to navigation since the war began may be placed at 5,000,000 tons, about 11 per cent of the gross tonnage afloat at the beginning of the war.

PRACTICAL SHEET METAL WORK

(Continued from page 39.)

section by drawing solid curved lines. These curves represent the desired pattern of the branch piece.

Figs. 4 and 5 show plan elevation and pattern of a 90-degree elbow. The same method is adopted as was described in developing the branch for the T-piece. Allowance must be made for laps or seams, as the came may be, in accordance with instructions given in the last article, No. 6.

(Continued in next issue.)

WHY THE CLERK GRINNED

(Continued from page 33.)

ous points. Connect the points of interness to his own gods of system and efficiency.

System at the Freezing Point

The snow shoes, brooms, shovels and other hanging articles were so well hung that they were almost permanently affixed in their places. The show cases were given up entirely to objects of an attractive appearance, regardless of their seasonableness and utility.

There were beautiful displays of bath room fixtures and lawn et ceteras, forgetful of the fact that people neither installed plumbing systems nor watered their lawns in January. It was the same thing in the warehouse where for the sake of compactness of arrangement a large left-over stock of nails were piled parapet-like in front of a lot of children's sleighs and light farmers' sleds. The basement was a labyrinth of orderly rows of attractive articles that would not be required for months whilst on the shelves and in the odd corners where they were least likely to be seen and if when found, the hardest to get at, were a large number of the articles most likely to be called for.

My face showed my astonishment. He misunderstood the cause of it. I felt out of words so when I returned to the office I glanced at my watch. We had eaten up just one hour and ten minutes of his "not to be disturbed" hour. Apparently like everything else about the establishment, it was a sacrifice of vital concentration to mere appearance, a sort of orderly superficiality.

A great light broke on me. I understood now why this young man had an hour and ten minutes to spare in an exposition of his system methods to a casual caller, why the owners of those teams were not in here swapping the gossip of the countryside with this human rule, why the poor girl looked so tired and why the clerk had seemed to grin.

WEEKLY PAINT MARKETS

(Continued from page 46.)

Gasoline Again Advances.—Gasoline and benzine have again advanced to a new high level, which was fully expected. With no improvement in the crude oil situation and steady increase in demand for gasoline, it is almost impossible to say where the market will go. Quotations now are abnormally high, but there is no doubt at all that further advances will be registered within the next few months. The latest advance is 1½c per gallon, and gasoline is now quoted at 32c and benzine at 31½c per gallon.

Glass.—There is no change to report in the glass situation. The demand is very light, but prices are very firm. Nothing has been done as yet with regard to advancing prices, but there is every probability that such a step will have to be taken sooner or later owing to conditions prevailing in the American market.

Putty.—The market is very quiet, and prices are unchanged, as shown in current quotations.

MERCHANT VS. PEDDLER

Ingram & Davey, Ltd., St. Thomas, Ont., are using newspaper space to compete with peddlers who are going through the county selling coal oil, etc. One of the recent ads. run by the company read as follows:—

Farmers' Attention

"We are informed quite a number of farmers have been buying coal oil from agents going through the country, representing American oil manufacturers. For the benefit of those not posted in the prices, we might say that for over a year we have been selling the best American Royalite coal oil as follows: 1 gallon lots at 16c gal.; 3 to 5 gallon lots at 15c gal.; 40 gallon lots at 13½c gal.

"Until a further advance by the refiners we will continue to sell at the above price.

"Don't send your good money to the United States; bring in your cans or tanks and let us fill them for you with the best American Royalite Oil, and leave your money with people who are helping build up St. Thomas."

WHO AM I?

I am more powerful than the combined fighting forces of the world at the present day.

I have destroyed more men than all the wars of the world, and while I exist I will destroy more life than all the wars to come.

I am far more deadly than bullets or shrapnel shell, and I have wrecked more homes than the mightiest siege guns or the worst plague which ever existed.

I steal more money from the people in Canada in one year than would pay off her present national debt in five years. I spare no one, and I find victims among the rich and poor alike; the young and old; the strong; the weak; widows and orphans know me.

I loom up to such proportions that I cast my shadow over every field of labor from the turning of the grindstone to the moving of every railroad train.

I kill, and maim for life thousands upon thousands of wage earners in a year. I lurk in unseen places, and do most of my work almost in silence.

I am relentless, I am everywhere; in the home, in the field, on the streets, in the factories, at the railway crossings and on the sea.

I bring sickness, degradation and death, and yet few seek to avoid me. I am friend to no man not even to myself and wish I could destroy myself.

I am your worst enemy.

I AM CARELESSNESS.

THERE'S PROFIT IN SELLING THE "1900" LINE OF WASHING MACHINES

To be thoroughly profitable to the dealer, an article must measure up to these two requirements:

1st:
It must provide a reasonably large profit per sale.

2nd:
It must have merit sufficient to enable the dealer to make sales easily.

One of these recommendations alone should not be sufficient to interest you. Both are needed for real profit. Both are provided by

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 10.—Apart from a continued state of unsettledness and uncertainty with strength generally in evidence, there is no outstanding feature of the paint situation this week. Manufacturers are busy in connection with their spring orders, which, in the outside districts, are of good volume and are demanding earlier attention than usual as regards shipment. Since the institution of the advanced prices, which formally went into effect on the 1st of the month, there has been some cessation of new business, but this does not appear due so much to the fact of the higher quotations as to the fact that prior to that date a general effort was made to give the trade an opportunity to book for their spring needs at the old rates; in a few cases the lower prices are still being offered to regular customers on whom travellers had not an opportunity of calling prior to the rise.

As to the future the indications still favor a further advance on mixed lines a month to two months from now and this will be the logical development of the situation unless there is some marked reductions in the main ingredients. Oil is steady, lead very strong and turpentine a trifle easier.

Linseed Oil Steady.—Following the declines of a couple of weeks came with weakness in the flax market, linseed oil has continued steady in the local market on the basis struck last week. Present conditions do not indicate any particular movement but of course it is difficult to make forecasts with the flax market subject to violent fluctuations. The local market is covered by the following quotations:

	Raw.	Boiled
1 to 2 barrels	97c-$1.00	$1.00-1.03
3 to 5 barrels	96c-99c	99c-$1.02
6 to 9 barrels	95c-98c	98c-$1.01

White Lead Very Strong.—Lead was very strong on the advance recorded last week even as it was made. Since there has been still another increase in the quotation for pig. Under these conditions higher prices for lead are warranted. Factors for restraint are that the trade is pretty well bought and the volume of business passing is not heavy and the fact that already the prices are abnormally high. Quotations are on the basis of $11.55 for ton lots, with 30 cents added for smaller quantities and these figures are for immediate acceptance and immediate delivery only. Any activity in demand is likely to lead to immediate advances.

Turpentine Slightly Easier.—There is a continued easiness in the turpentine situation which has had the effect of reducing quotations of last week to some slight extent. The basis for single barrels may now be given as 77c-78c and 2 to 4 barrel lots 76c-77c. Some prices as high as 80c for single barrels are heard but such quotations may be regarded as subject to immediate adjustment.

Gasoline Goes Higher.—Following the trend of the market reports recently printed in these columns, and general information given regarding the gasoline situation in the United States, there has been another advance of 1c on local quotations. Further the prediction is made that further increases are to be looked for with the probability of the addition of another cent in the coming week. Reports from the States indicate that advances are likely to continue, statistics showing that consumption is increasing at a rate which is out of proportion to production. New quotations are:

Gasoline, in barrels	32c
Gasoline, in drums	29½c
Gasoline, tank wagon	29c

Benzine ½c lower.

Paris Green.—Despite the fact that the opening prices for Paris Green are over one hundred per cent. higher than the opening basis of a year ago, predictions are made that there will be materially higher quotations before the end of the season with anything like normal consumption. The high prices are due to a shortage of the required chemicals and as the supplies of these chemicals become further exhausted advances are a logical development.

Arsenate of Lead.—Owing to a shortage of chemicals, a difficult situation has arisen with regard to arsenate of lead. The Canada Paint Company announces that all quotations have been withdrawn for the time being. It is expected that there will be further supplies of chemicals available in the near future but when the quotations are re-established it is predicted that there will be advances in prices of 5 to 7 cents per pound.

TORONTO

TORONTO, Ont., March 9.—The situation in the paint market is much the same as last week. Business has been comparatively quiet, but renewed activity is looked for when the painting season gets under way. Manufacturers are busy shipping orders booked last month, and deliveries will continue in steady volume for some time. All indications point to a good demand for paint in the country this season, and the outlook in this respect is bright. The city trade has been quiet of late, but a marked improvement is expected later when the weather conditions are more favorable for outside painting.

Gasoline and benzine have again advanced, and indications point to still higher prices. White lead is very firm at the advance announced last week. Prices of arsenate of lead have been withdrawn owing to the scarcity of raw materials. The demand for Paris green is good, considering the high cost of this material. Linseed oil and turpentine are unchanged, the markets being fairly steady. There is no change in the glass situation, and the proposed advance has not been announced yet.

Linseed Oil Steady.—The market is a little firmer, but there is no change in the situation. Flax seed is higher, being quoted at around $2.11, Winnipeg. The oil cake situation is creating considerable uneasiness, and may affect prices of oil. The demand locally for linseed oil is light, and prices now have a very narrow range. The following prices are being quoted for linseed oil in Toronto:

	Raw.	Boiled.
1 to 2 barrels ...	$1.02	$1.05 per gal.
3 to 5 barrels ...	1.01	1.04 per gal.
6 to 9 barrels ...	0.99	1.02 per gal.

Turpentine Quiet.—The market is quiet, with quotations at the same level as last. Local influences are apparently still keeping the price of turpentine down, as the market at Savannah is firm, and quotations there have been practically unchanged for several weeks. There is very little turpentine moving in the South, but stocks are being gradually depleted. The demand is light locally, and the following prices are being quoted:—1-barrel lots, 78c; to 4 barrels, 77c, and 5-gallon lots, 85c per Imperial gallon.

Arsenate of Lead.—Owing to the increase in cost of raw materials and difficulty being experienced in getting supplies, makers have withdrawn prices of arsenate of lead.

Paris Green.—On account of the high cost of Paris green, dealers are only carrying light stocks. It is a question however whether the supplies of raw materials will be sufficient to meet the demand. Prices are very firm.

White Lead Firm.—The market is firm at the advance announced last week. Pig lead has again advanced since the new prices for white lead were issued, so manufacturers are confronted with another problem. Indications all point to still higher prices for pig lead, in which case white lead may follow suit. White lead is being quoted locally at $11.70 per 100 lbs. in ton lots, with 30c extra for less than ton lots.

3 SPECIALS GUARANTEED TO GIVE EXCELLENT SERVICE

IMPERIAL GENUINE — The highest grade of Babbitt Metal. Manufactured expressly for all bearings carrying extremely heavy loads.

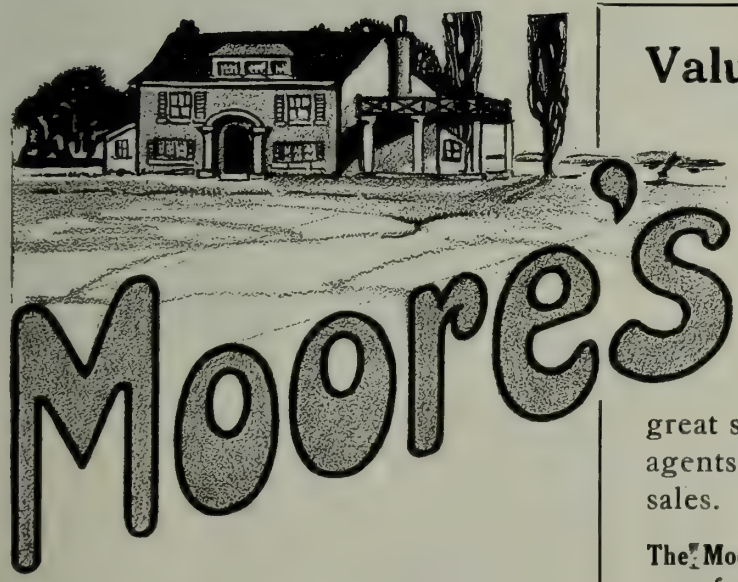
HARRIS HEAVY PRESSURE — For all general machinery bearings. Is known as the BABBITT METAL WITHOUT A FAULT.

ALUMINOID — Specially prepared for medium and light speed machinery.

We Have Everything in Metals

THE CANADA METAL COMPANY, LIMITED

TORONTO MONTREAL WINNIPEG



Moore's House Colors

Value that magnetizes the paint trade

Moore's house colors are equal to any good paint in quality and they sell at a comparatively low price.

They are sold and used from Coast to Coast and have proved a great success in any climate. Our dealer agents are enthusiastic over their immense sales.

The Moore line will show you that there's lots of room for expansion in your paint turnover.

Lane's Unique Ratchet Wrench

Machine made throughout. Made of the best material obtainable. The sockets in both the standard and Ford sets are turned from Bessemer steel and case hardened, and are warranted not to break or spread. Has no equal for close work.

THE FORD SET Contains:
1 Handle 7 inches in length. 2 Screw-driver bits.
1 Extension bar 7 inches in length.
6 Sockets to fit all nuts and bolt heads on Ford car, including the cylinder head.

STANDARD SET Contains:
1 Handle 7 inches in length. 2 Screw-driver bits.
SEVEN Sockets to fit semi-finished Hex. nuts, as follows:
U. S. Standard from ¼ in. to ½ in.
A. L. A. M. Standards from 5-16 in. to 11-16 in.
Cap screw heads from 5-16 in. to ⅝ in.

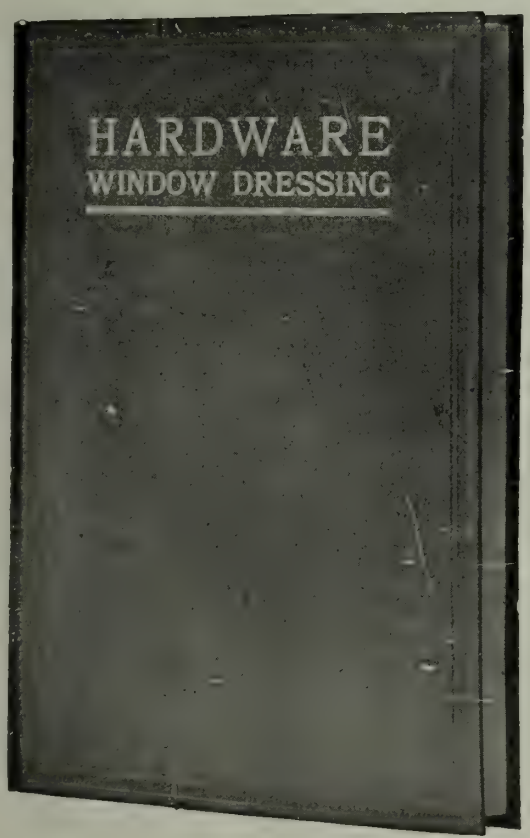
WILL B. LANE

180 North Dearborn St., CHICAGO, ILL.



You May Become a Practical Window Dresser for $2.60

This is the first book ever written devoted exclusively to Hardware Window Display, and is a really new and good book. It is a practical, up-to-date collection of ideas of the most expert window dressers in the world. There are hundreds of displays in the book that can be put in at practically no expense — any one of them will bring enough extra trade to the store to pay for the book many times.

BOOKS FOR HARDWAREMEN

Every hardwareman can get valuable pointers and make his business a more profitable proposition if he will study the experiences of experts who have 'made good.' Our Technical Books for hardwaremen cover a wide range of subjects, among which may be mentioned Metal Working Books, Hardware Window Dressing, Store Business Methods, Paints and Painting, Salesmanship and Sales Plans and Advertising. We have also the very latest books on the plumbing and heating problems.

Re Gauges of Sheets.
In the quotations which follow on sheets, it is advisable to note that Queen's Head, Fleur de Lis, and Gorbal's Best Best, also Colborne Crown are English gauges, while Apollo and Premier are U.S. gauges. American 10¾ oz. is the same as English 28 ga.; American 28 gauge is the same as English 26 ga. The heavier gauges are almost identical, the English sheets running slightly lighter than the U.S. standard.

RAMSAY'S
RAMS
"MAKING GOOD"
The only way for paint to "make good" under the test of Canadian climate is to make the paint so good that it is worthy to bear the name RAMSAY.
Since 1842 we have manufactured the best paint we knew how to make—and since the first can was used "Ramsay's Paints" have been making good"—for us, for the dealer and for the man who finally uses them on the job.
Write us for prices on whatever you need. Ours is "The Complete Line."
"The Right Paint to Paint Right."

UNIVERNISH

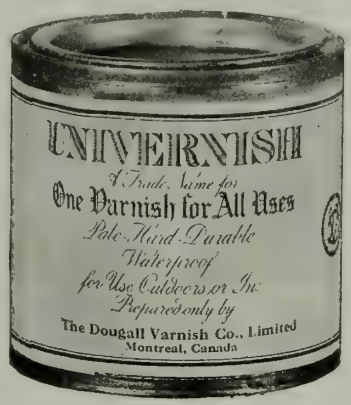
No matter for what purpose it is required, Univernish will give entire satisfaction.

Hot water won't hurt it.

Wind and rain do not injure it.

On floors, furniture won't scratch it, and it will not show heel-marks.

For boats it is ideal—it will not turn white.



For indoors or outdoors, floors and woodwork, boats and automobiles, carriages and pianos.

For any job and every job, Univernish will do the work, and do it well.

Packed in handsomely decorated boxes of twelve quarter pints, to retail at 25c each.
Also in ali the regular larger sizes.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Every Day Is Pay Day

THAT'S right—every day you work **our plan**, your pay is given you. "Pay yourself first" that's the idea of our representative plan. When you devote ten hours daily acting as our representative—your pay is sure and certain.

We need a hustling representative right in your district. A young man capable of producing good business, preferably one with salesmanship experience. The position will pay big money to one with enthusiasm, energy and ability. Do you know, or are you such a man?

If you **are** and are willing to exchange **your spare time,** representing our publications, **we will** show you how that same spare time, properly used, **will produce** for you as much **cash** as your regular income.

Does this interest you, if so write us TO-DAY and we will tell you all about it.

The MacLean Publishing Co.
LIMITED
143-153 University Avenue, Toronto, Ont.

We'll Prove It

GIVE us a chance to prove to *you* that you can make money by working our plan. Hundreds of men and women in Canada are making splendid salaries by working for us a few hours each day. Why not learn all about it?

If your regular position isn't producing enough money to take care of a few added luxuries—our plan will fit in splendidly, giving you as *much* extra money as your spare time will allow for. The more time you devote to the plan the more money you can make. To learn all about it—drop us a *Post Card,*—back to you by return mail will come full particulars. This will not obligate you in any way. Simply say, "Send me full particulars of your money-making plan."

Name.....

Address.....

The MacLean Publishing Co., Limited
143-153 University Avenue - Toronto, Ontario

We'll Exchange
Our Money For Your Spare Time

YES, that's just what we mean—we'll exchange our money for your spare time efforts. There are in Canada to-day hundreds of young men, **who are** representing us in their "off hours," and their spare time with us is giving them regular weekly incomes which are constantly increasing as they devote more and more time to our plan.

You have spare time on your hands. Every one has. What are you doing with it? Are you using it to the best advantage? Is it bringing you a profitable return in dollars and cents? If it isn't, write and ask us how you may increase your earnings by allowing us one or two hours daily. We'll tell you all about it.

Our plan of representation is a sure road to success. It's not anything new or unproven. When other young men are increasing their incomes from $10.00 to $20.00 a week, why shouldn't you? Make up your mind that you will join this "Spare-time-money-making class of hustlers" and reap the profits.

The first thing to do is to drop us a line—a post card will do. Back to you by return mail will come full particulars of the plan. This obligates you in no way. Simply say, "Show me how to turn my spare time into money."

Atlas 10 Cent Fly Swatter

This swatter has an extra long handle — 10 inches. It is very neatly and securely bound with soft green felt — cannot mar the finest furniture. Especially adapted for parlor or drawing room use. We have made it extra strong and flexible — will outlast any now on the market.

Our 5 cent swatter is the best ever sold for a nickel. Also it has a triangular fold, permitting the insertion of your ad. if you desire.

Now is the time to place stock orders. We'll gladly quote prices and terms.

Atlas Mfg. Co.
New Haven, Conn.

Every Minute Pays → YOU ←

IS every minute of your spare time bringing you profitable returns? Through the day time you earn money—why shouldn't your spare time be devoted to bringing you in an extra income?

We would be pleased to tell you about a plan, that although not interfering in the least with your regular duties, will produce for you an extra $10.00 a week. That amount can be increased as you become proficient in the work, and bring into play the salesmanship that your regular occupation gives you.

We need a man in your home town to represent us, and for that service, his earnings will be liberal. That, we will tell you all about when you write us.

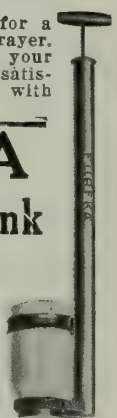
Do so to-day—next week every minute of your spare time will count for you in cash.

The MacLean Publishing Co.
143-153 University Ave.
Dept. C. G. Toronto, Can.

In Demand

There is a good demand for a reliable, inexpensive Sprayer. Meet this demand and give your customers that come-back satisfaction. You can do this with the

EUREKA Glass Tank Sprayer



The receptacle of this Sprayer is an ordinary Crown Fruit Jar (one quart size), equipped with a heavy zinc cover. The pump cylinder is made from L. X. tin and is considerably longer than the ordinary glass tank Sprayer. The solution comes into contact with zinc and brass only, which will not easily corrode, thus giving longer service. This Sprayer is strongly made and attractively finished, and is excellent for spraying potatoes, small shrubs and all disinfectants in poultry houses and on live stock. Our prices are in your favor and our quality pleases customers. Let us send you our descriptive catalogue. Write—

Reliable QUALITY

PEERLESS LAWN FENCING

Enhances Property Values

A BEAUTIFUL lawn fence gives any piece of property that symmetrical, pleasing, orderly appearance that not only affords its owner a keen sense of pleasure and satisfaction while occupying the premises, but when offered for sale, it brings a better price. It's an investment—not an expense.

Peerless Ornamental Fencing

is made of strong, stiff, galvanized wire that will not sag. In addition to galvanizing, every strand is given a coating of zinc enamel paint, thus forming the best possible insurance against rust. Peerless Ornamental Fence is made in several styles. It's easy to erect and holds its shape for years.

Send for free catalog. If interested, ask about our farm and poultry fencing. Agents nearly everywhere. Agents wanted in open territory.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance): 2c per word first insertion, 1c per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

WANTED

WANTED—HARDWARE CLERK WITH FOUR or five years' experience, to act as city traveller. Must be good salesman, and good personality. Give references and state salary needed. Apply Peart Bros. Hardware Co., Regina, Sask. (12)

WANTED—A GOOD SALESMAN CALLING on hardware dealers and painters, also a good railroad salesman, to take a well-known paint specialty line on commission. All enquiries treated confidential. Apply Box 260, Hardware and Metal. (tf)

WANTED—TINSMITHING BUSINESS, CARrying stoves, granite and tinware. Stock not to be over $600. Western Ontario preferred. Address Box 725B, Forest, Ont. (11)

HARDWARE DEALERS — SEND YOUR leaky automobile radiators to us. We specialize on radiator repairs; prompt service. Burrowes Mfg. Co., Toronto.

WANTED — POSITION AS HARDWARE clerk, with Western experience; steady employment. Can furnish best of references. Box 253, Hardware and Metal. (14)

LIVE HARDWAREMAN USED TO MANAGing and buying, thirteen years' experience in farm and high-class hardware. Open for engagement now or in spring. Box 262, Hardware and Metal. (12)

HARDWARE SALESMAN (MARRIED), with ten years' experience as salesman and manager, desires position with either wholesale or retail firm; references if required. State salary paid. Apply Box 264, Hardware and Metal. (11)

FOR SALE

FOR SALE — FIRST-CLASS HARDWARE and stove business in good manufacturing town, with all factories busy. This stock is all in first-class shape and all bought at the old prices; will run about $5,000. This is a money-maker and worth investigating. Box 263, Hardware and Metal. (12)

FOR SALE — HARDWARE BUSINESS IN southern Saskatchewan, on Soo line. Best wheat growing district. Town having five elevators and large trading territory. Present owner wishes to leave for family reasons. Apply to Box 248, Hardware and Metal. (12)

HARDWARE AND TINSMITHING BUSIness in central B.C. Five to twelve thousand dollars will handle. Good reasons for selling. Apply Box 261, Hardware and Metal. (12)

MISCELLANEOUS

WAREHOUSE SPACE TO LET.—WE ARE prepared to rent space, warehouse or forward goods for any manufacturer or commission firm at reasonable charges. Merchants Hardware Specialties, Limited, Box 597, Calgary.

BARGAINS IN PAINTS—A LARGE STOCK of mixed paints, varnish stains, oil stains, colors in oil, enamels, etc., offered in lots to suit, at lower than manufacturers prices, on account of labels and tins slightly rusted and soiled. Fine for advertising job lots or bargains. List on application. J. R. Walker & Co., Montreal. (11)

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

ESTIMATING. BY EDWARD NICHOLS, Architect. 128 pp., 22 illus. Cloth binding. Containing invaluable information for the use of Architects, Contractors, Builders, Plumbers and Heaters, Painters, Roofers, Cornice-Makers, and other workers in the building trades. This handbook tells just how to go about the task of making an estimate intelligently. Price, postage paid, $1.00. MacLean Publishing Co., Ltd., 143-153 University Ave., Toronto.

Now is the Time to Feature the

SWEEPER-VAC.

Housecleaning season is approaching, and the opportunity for good sales is at hand. Feature the Sweeper-Vac. A demonstration means a sale, and a sale means a profit worth while.

Write for Full Particulars

Frothingham & Workman, Limited

Montreal

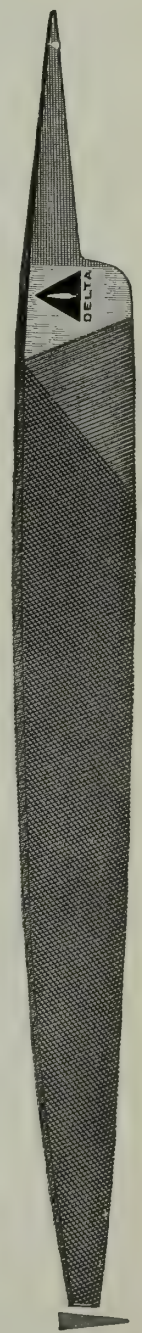
Want Ads.

If you want a buyer for your business, or have a situation to fill or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

Try it out

DELTA FILES

remove metal quickly for the user and move stock quickly for the dealer.



They make easy work of tough cutting propositions and stay sharp after others are discarded.

Tests prove their superiority.

You'll find the agency for this line exceedingly profitable.

Delta Agents are supplied with very effective advertising matter which greatly assists in getting new customers.

A STRAIGHT TALK FROM THE MANAGER

No. 35

Next week you will receive your copy of Hardware and Metal's Annual Spring Number, and when you have read it, you will agree that it is the most practical issue ever turned out by a Canadian trade paper.

The list of Editorial Contents which has just been placed before me shows that the Editors have gathered a wonderfully interesting and instructive lot of articles for this number.

They are the kind of articles you will want to look up many times during the next few months. So we are inserting a cord in the upper left-hand corner that you may hang your copy on a convenient nail or hook, right beside your desk.

But the most meat in the whole issue you will find in the advertising pages. It will mean money in your pocket to read them, not once or twice, but very often during the Spring and Summer months.

J. G. L.

"This gun does what I have read that other guns would do, but they all failed me in the test, until I bought this gun of yours (Ross .280 High Velocity) . . . But when that Ross bullet struck them, they crumpled like a house of cards. Every one hit fell dead in his tracks. . . . . I intend spending the balance of my life hunting and unless someone invents a better gun I shall always use the Ross."

RALPH EDMUNDS,
Lawyer,
Idaho Falls, Idaho

The above extract speaks for itself, and points out a few of the causes of the great popularity enjoyed by the Ross .280 High Velocity.

The Ross .303 Sporting Models and the Ross .22 Cadet Rifle are both in great demand. The .303 Sporting uses the easily obtainable .303 British Ammunition and is a reliable, accurate and hard-hitting weapon.

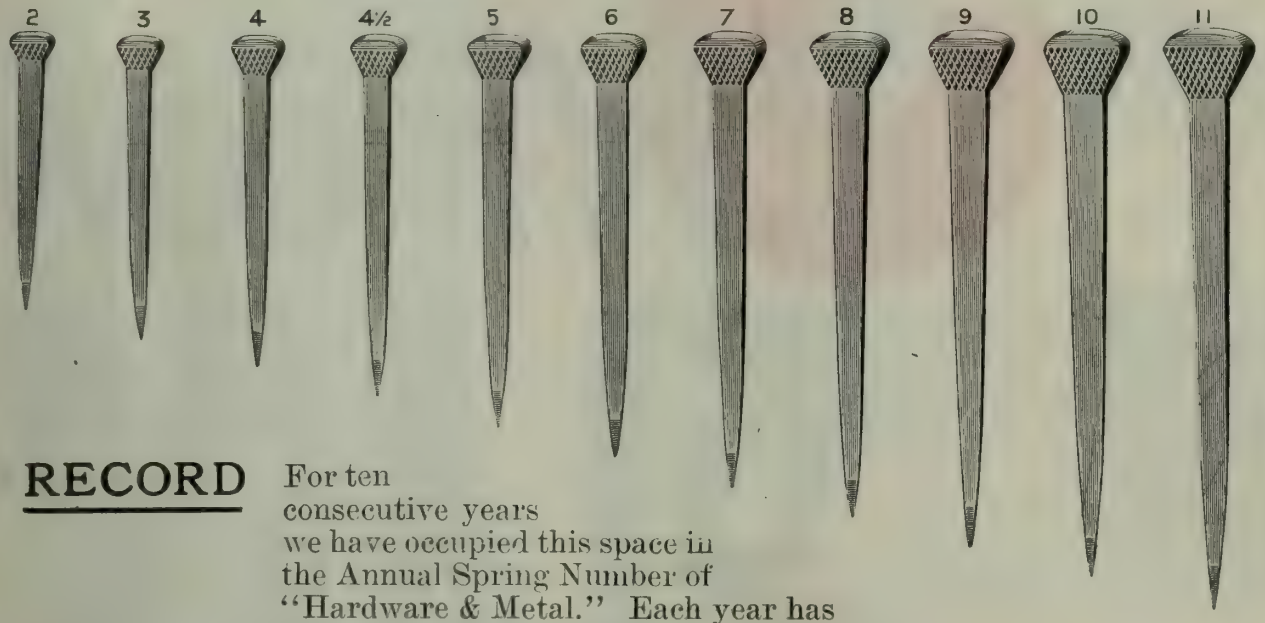
HORSE NAILS

The best made anywhere, and the fastest and most satisfactory blacksmiths' selling line of any on the market.



RECORD For ten consecutive years we have occupied this space in the Annual Spring Number of "Hardware & Metal." Each year has shown a steady and gratifying increase in our business and our sales for 1916 will be greater than ever.

CAUSE This we owe to the uniform excellence of **CAPEWELL HORSE NAILS,** to the loyalty of our customers, to the care we have taken of our business and to the **IDEAL** we have consistently followed of rendering complete satisfaction to horseshoers, retailers and jobbers.

EFFECT With the best equipped plant in the Dominion, to which we are constantly adding, we propose to produce **CAPEWELL HORSE NAILS** in ever-increasing quantities, confident that they will be readily marketed by their incontestable superiority, by the unabated energy which has characterized this Company and by the all-round satisfaction in our line of the hardware trade generally.

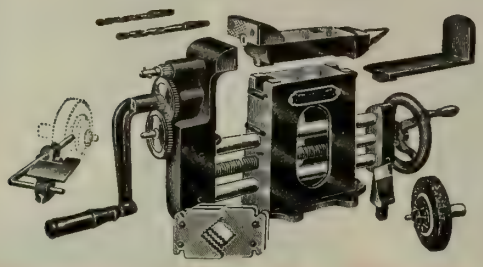
Profitable Sellers the Year Round



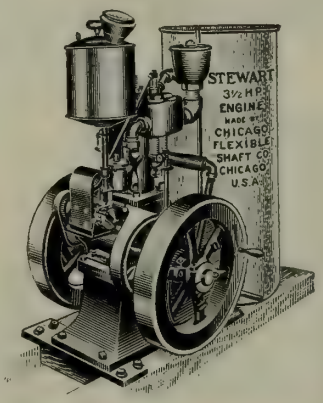
Stewart Handy Worker

The most substantial and practical of combined tools. Never fails to please the purchaser and shows you a substantial profit.

It Comprises:

A strong and powerful steel-faced vise, up to 4½ inches. Width of jaw, 4 inches. Cutting hardie. Steel pipe vise takes up to 1½ inch pipe. Drill press which may be operated at two speeds. Good-sized anvil. Corundum grinding wheel, 5 inches x 1 inch. Three speeds: direct, 4 to 1 and 16 to 1.

Weighs boxed, 90 pounds, and sells to the user, complete with all attachments, at **$14.00.** From your jobber or direct.



Stewart Small Engines

Made only in ½, 2 and 3 h.p. sizes.

Superior design, material, workmanship and finish.

Most economical of fuel—gasoline.

To one dealer in each locality we offer an exclusive agency that means much in sales and profits. Write us.

Stewart Grinding and Drilling Machine

This portable Grinding and Drilling Machine is valuable to farmers, garages, etc.

With it farmers can grind discs quickly and easily without removing the discs from the implement.

The drill attachment, taking any square shanked drill up to ½ inch, is exceptionally handy for drilling holes in metal pieces.

A very practical outfit that will sell at all seasons.

Boxed, complete, 45 pounds. To the user at only **$14.25.**

From your jobber or direct. Write for special circular and discounts.

IT HAS PAID US AND WILL PAY YOU

GALVANIZED "EASTLAKE" SHINGLES

"EASTLAKE"

have made — and will make — more money for Canadian Hardwaremen than any other type of metal roofing.

The Quality Is There!

They satisfy your customer—they sell easily—they lay quickly — they make a good-looking roof — they are fireproof.

There are immense possibilities for the Hardware and Tinsmithing Trades in the sale of Metallic Shingles and Metallic Ceilings. Realize this before your competitor gets a strangle-hold on the trade.

Write us to-day.

Let us assist you to make money out of

METALLIC CEILINGS AND WALLS

Our Re-Squared Ceiling Plates lay quickly and straight—they never run askew. They are stamped on steel dies with Machine-Cut Beads and the joints are snug and neat. The labor you save in laying our ceilings makes a nice profit in itself.

PLATE 424

Scores of new designs coming out in our new catalogue.

And remember that this line

Carries Three Profits

1st —On the sale of the goods,

2nd—On the labor erecting,

3rd —On the paint to re-coat them.

The Quality House is Safest—Think of Safety First.

GOODELL-PRATT

1500 GOOD TOOLS

ABOVE COMPETITION

The best of modern machinery coupled with forty-seven years of level making experience enables us to sell you levels that are unsurpassed.

A long period of air drying and the best of modern steam dry houses—a type used only in the best furniture factories—assures the best drying possible.

The Stratton adjustment, the dovetailed brass binding, the selected high-grade vials, and the extreme care used throughout their entire construction, all help to place the Stratton Levels above competition.

We will send you "The Story of the Stratton Level" which tells their story in a very interesting way. It will sell the levels to you, and we will send you additional copies for distribution. These booklets will sell some of your Stratton Levels. Satisfaction will sell the rest.

MORE POWER

Goodell-Pratt's No. 111 has more power than any other Automatic Screw Driver on the market. It is the result of over twenty years' experience in manufacturing these tools, and they have been twenty years of progress and improvement. As it is now manufactured, the spiral nuts will give many years of satisfactory service if they are oiled occasionally.

The No. 111 Screw Driver is being strongly featured with MR. PUNCH (our Automatic Drill No. 185) in a big, national advertising campaign to sell good tools.

We also manufacture Ratchet Screw Drivers, Plain Screw Drivers and 1500 other GOOD TOOLS.

Our Big Red Tool Catalog is Sent Free.

Hoyt's Frost King

This Babbitt has been tested for years in many of the large machinery manufacturing plants, and has proven such a success we are placing it on the market as a first-class, all-round Babbitt. It will not only take care of high speed, but will stand up to heavy duty work in an extraordinary way.

For saw mills, planing mills, threshing engines, traction engines, rolling mills, pulp machinery, and all classes of stationary engines, it is without equal.

Hoyt's Genuine "A"

The Babbitt is a pure tin, copper, antimony alloy, free from lead. It is made on the original Babbitt formula, and for high-grade, Genuine Babbitt stands in a class by itself.

Hoyt Babbitt Metals

Lighten the Babbitt Expense of the Plant

For over 40 years we have devoted our efforts exclusively to the perfection of white metal alloys, having delved carefully into the chemical, physical and mechanical properties of each element and its various compounds.

All elements entering into our mixtures are carefully refined and put together in such proportions and in such relation to each other that the best possible alloy is secured for the work for which it is designed.

ANNUAL SALES OVER 5,000,000 DOLLARS

Hoyt's Nickel Genuine

Owing to the greater service required of Babbitt, as modern machinery developed, it was necessary for us to design an alloy that would meet with these new requirements. Our Nickel Genuine, for heavy duty, high-speed work, is probably as perfect as an alloy can be made. It is especially designed for use in gas engines, gasoline engines, and all classes of marine engines, and is especially adapted for automobile engines. This alloy is exceedingly tough and durable.

Hoyt's Dynamo Genuine

As the name implies, this metal is compounded especially for dynamo and motor work. It is the only alloy that will give the best service on street car motor or any motor that runs under severe duty. It is an extremely high Copper alloy, and is as pure an actual Bronze as a Babbitt can be made with success.

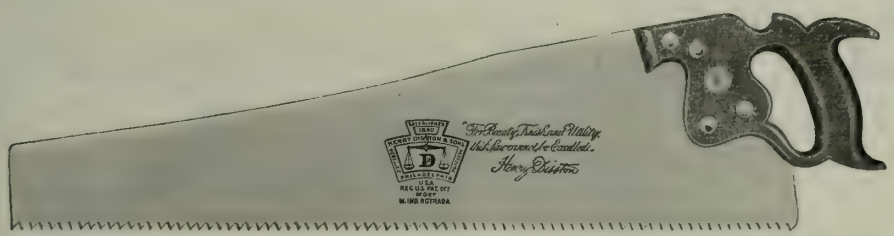
A good mechanic can use 'most any tool--
but how about your other customers?

Probably a small percentage of your customers have sufficient skill to "get along" if necessary with tools of **average** quality. But how about those who buy tools for only occasional use? They're the big majority on whose satisfaction the growth of your business, in large part, depends. And even the mechanic isn't satisfied with inferior equipment, because he can do better and quicker work with less effort with high class tools—**and he knows it.** And he knows



DISSTON
Saws, Tools and Files

If you can't give them to him you **may** lose a sale and a customer, but in any case his opinion of your store is influenced.

But the unskilled customer **depends on you.** You serve your own interests best by giving him DISSTON TOOLS--Tools that are reliable, accurate and serviceable; tools that **respond,** even in the hands of an amateur; tools that it is a pleasure to handle and use.

Then you have pleased everybody—mechanic and layman. And if you have won your customers' confidence, you can't lose their trade.

DISSTON SAWS and TOOLS are a short-cut to CUSTOMER-CONFIDENCE. STOCK THEM.

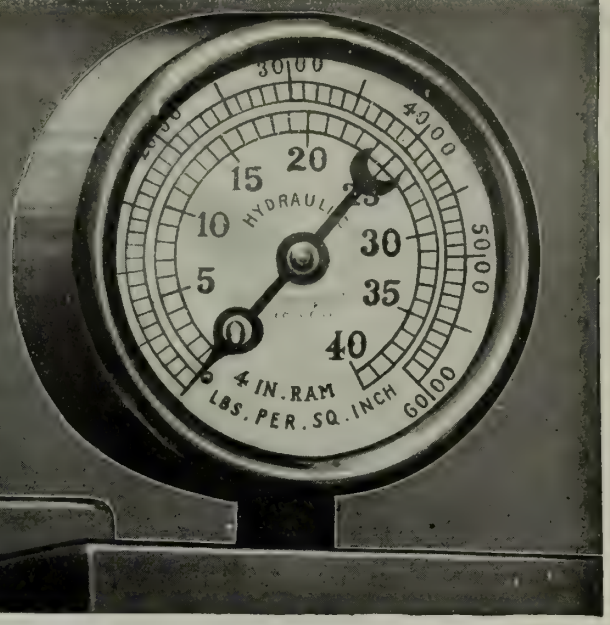
The Pressure Gage Measures The Machinists Accuracy



What 1-1000 Inch Means in Tons Pressure

IN fitting any press-on job, the amount of pressure is the limiting factor. The specifications call for a certain pressure. A variation of 1-1000 of an inch means a variation of tons of pressure and a return of the job to the lathe for refitting.

Accuracy in measuring forced fits saves much in shop costs and adds to the value of the workman. The machinist who uses

Starrett Tools

and Instruments of Precision

rarely has a job come back for refitting. For accuracy, ease, speed and permanence of adjustment these instruments are known by every expert machinist and engineer in the world and recognized as standard. Starrett headquarters is the buying center for skilled workmen. We deal direct with hardware stores.

Big Ben
Baby Ben

The Business Getters

BIG BEN and Baby Ben have so much confidence in their ability to make good for you that they go right into the homes of your customers and solicit business.

While other clocks are lying 'round the shelves or under the counter waiting for *you* to sell them, Big Ben and Baby Ben are out plugging for your business and creating a demand for themselves. They do this through the advertising pages of magazines with national circulation.

It took more than mere nerve to step into the advertising limelight and talk to the public about these clocks—it took absolute belief in the clocks themselves and their ability to satisfy the trade, for every advertisement that appears is a personal endorsement by the Western Clock Co. of the quality of the goods and a guarantee of their excellence.

Advertising *might* sell a poor clock for a year or so—till the public got onto it—but to *keep on* advertising for five years, increasing the sales each year, 90% of them repeat orders, takes a first quality clock to back up the advertising.

Big Ben also contributes to your window and counter displays. He brings neat, interesting show cards and handsome, colored posters to liven up the windows and store and incidentally sell more clocks. He's working on some new stuff that you'll like.

This is to be Big Ben's biggest year. We are having difficulty supplying them fast enough. Right now we are five weeks behind on deliveries, so anticipate your needs.

The Farmer Must Increase His Production

—and do it with a shortage of labor

NOW HOW CAN THIS BE ACCOMPLISHED?

Here Mr. Hardwareman is the solution—sell him the

Improved Automatic Self-Operating Sprayer

Operated with compressed air. **(You hold the hose and it does the work.)** THE CLIMAX OF ALL SPRAYERS; combines every conceivable point of excellence, including economy, durability, low price, and ease in carrying and operating.

Simplicity of Construction

Attention is called to the rigid handle, which serves for carrying the can and for plunger rod; also the air pump valve, which can be taken apart without moving a screw or fastening of any kind, and in less than one second's time; and lastly, to metal top of air pump, which may be attached readily, and which cannot wear out, as in the case of other structures held in position by tacks.

No. 1

Nothing but Galvanized Steel and Solid Brass or Copper used, with 3-ply rubber hose—nothing to rust or corrode.

What This Automatic Sprayer Will Do

A few strokes of plunger in air chamber will compress enough air to discharge the entire contents and make a continuous stream for nine minutes.

This means that the sprayer can be charged in fifteen seconds, when it will work uninterruptedly long enough to spray a quarter-acre of potatoes.

Warranty

We back up every sprayer you sell by warranting it to be perfect and give absolute satisfaction, free from every defect in material and workmanship.

Write for prices.

Another Timely Gillette Advertisement

The new 4-column advertisement reproduced above, appearing throughout Canada, is a live successor to the many topical advertisements which have done so much in the past to make Gillette advertising interesting and impressive.

The new series of Gillette advertisements, of which this is one, deals individually with various units which Canada is enrolling for the front. As almost every Canadian has now an enlisted relative or friend, these advertisements cannot fail to be keenly interesting and exceptionally effective.

We are preparing attractive display cards in colors, along the same lines, which will help you link up your store with this nation-wide Gillette campaign. Write for them!

Gillette Safety Razor Co. of Canada, Limited

Office and Factory: Gillette Building, Montreal

Two Thousand retail salesmen will say today, "It's an IVER JOHNSON," and two thousand sales slips will be made out a few minutes later. The public takes a lot for granted when the name "IVER JOHNSON" is branded on the goods. It takes for granted that an IVER JOHNSON Revolver is absolutely safe, accurate and dependable; that an IVER JOHNSON Bicycle is high grade throughout; that an IVER JOHNSON Shot Gun is the best value for the money that's obtainable.

"IT'S AN IVER JOHNSON"

The faith of the public has been won by forty-five years of consistent adherence to a policy of making honest goods — and telling the public about them.

Just on general principles, isn't it good business to push merchandise the public believes in?

You should have a copy of our big, 82-page, 1916 catalog. It tells about new models and many improvements; also sensational changes in our Bicycle proposition. It is free.

SPARK PLUGS

which are the product of the finest material and workmanship obtainable and which are

GUARANTEED FOR 5 YEARS

Merrick-Anderson Co.
Distributors
Winnipeg, Man.

Distributed by Leading Jobbers throughout the United States and Dominion of Canada.

The development of the modern motor car has resulted in a degree and character of service which was unthought of a season or two back, and it has forced the manufacturer of motor accessories and parts to evolve ways and means of keeping pace with this added efficiency.

Wood-Vallance Co.
Distributors
Winnipeg, Man.

In this day of the high-speed motor and of special electrical equipment the spark plug manufacturer has been particularly hard pressed, but in the years we have been engaged in the manufacture of quality products we have aimed not alone to keep abreast of these developments, but to offer always service which would exceed that which might be expected from the most highly perfected motor.

In addition to heavy-duty Giant type plugs, we are offering through our distributors a Junior type which is standard in size, and for which we claim superiority of service over any standard plug on the market to-day. While these are standard in size, they carry practically all the essential construction features of our Giant types, and are guaranteed for two years' continuous service.

Our distributors are offering special inducements to dealers, and are in a position to assure co-operation and price maintenance.

We have a particularly attractive proposition to offer other Canadian Jobbers.

Eclipse Manufacturing Co.

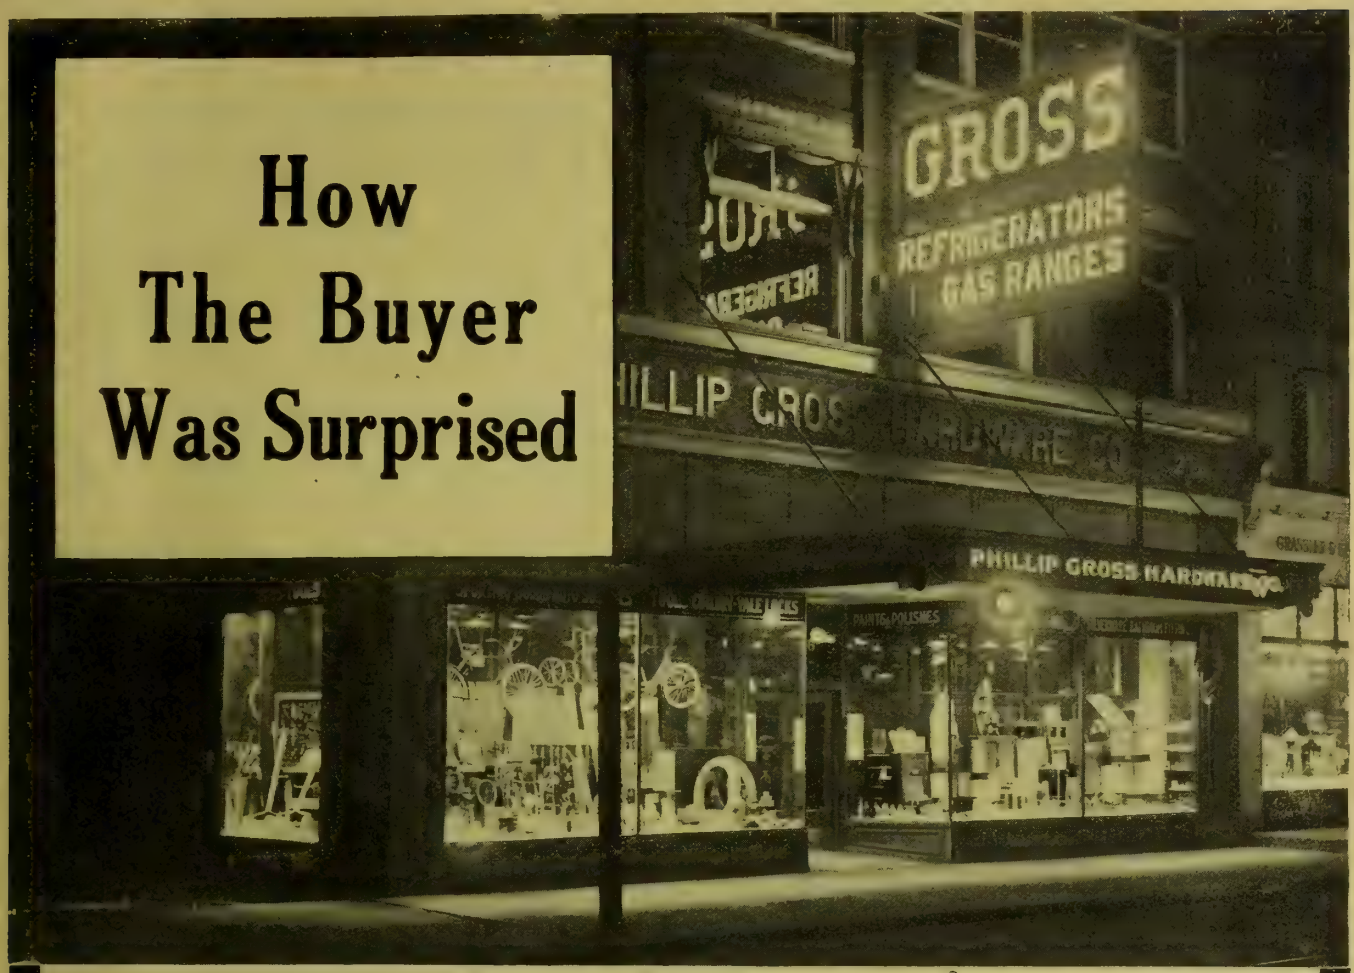
How The Buyer Was Surprised



"We can't handle every good line that's offered." That's what the buyer of Phillip Gross Hdwe. Co., Milwaukee (the largest hardware and sporting goods store in the United States) said when the Evinrude salesman first called, several years ago.

When he saw the motor—saw how simple—how really efficient it was—he ordered *one*. Get that? *One* motor!

But before the season was over, Phillip Gross Hdwe. Co. had sold that one Evinrude and thirty others besides. They could not get enough Evinrudes to supply the demand. Since then, the Evinrude line has been the most important profit-bringer in the Phillip Gross store, and the Evinrude is always to be found prominently displayed in the sporting goods department.

Hundreds of other dealers have been surprised at the way the Evinrude sells. This year the Evinrude line is more complete, more attractive, than ever before. The new Evinrude Four-Cycle Twin appeals especially to the man who wants more speed, more power. It combines the efficiency of the four-cycle principle with the freedom from vibration of the opposed cylinder design. There's more speed, too, in the single-cylinder models for 1916.

The Evinrude proposition to dealers is unusually attractive. Clip the coupon, or write to-day, then sit down and figure up how many dollars it would mean to you to have the Evinrude agency for 1916.

Game Farming and Your Business

This year Hercules advertising, in fact all the efforts of the advertising department of the company, centers about the important question of game breeding. America should be, as once it was, the greatest game country in the world. A well-planned, consistent campaign with this end in view is now being conducted.

This campaign deserves your support for two reasons. First, because you are an American citizen and the results which this work will achieve will have far reaching and most beneficial results for our country as a whole. Second, because it will have a very direct and decidely pleasing effect upon your own business.

The magazines in which game farming advertisements are appearing regularly are as follows:

American
Atlantic
Century
Country Life
Everybody's
Harper's
McClure's
Metropolitan
Literary Digest
Popular Mechanics
Red Book
Saturday Evening Post
Scientific American
Scribner's

World's Work
American Thresherman & Farm Power
Associated Agricultural College Papers
California Cultivator
Country Gentleman
Farmers' Mail and Breeze
Field
Farmers' Guide
Farm, Stock & Home
Kansas Farmer
Missouri Ruralist

Missouri Valley Farmer
National Stockman & Farmer
Oklahoma Farmer
Orchard & Farm
Pacific Rural Press
Power Farming
St. Paul Farmer
Wisconsin Agriculturalist
Wisconsin Farmer
Michigan Farmer
Ohio Farmer
Pennsylvania Farmer
Arms and the Man

Baseball
Field and Stream
Forest and Stream
Game Breeder
Hunter, Trader, Trapper
In the Open
National Sportsman
Outdoor Life
Outer's Book
Outing
Recreation
Rod and Gun
Western Graphic
Pacific Outdoors

These publication are read by over 10,000,000 people. Can you doubt the power that this advertising will have?

In every advertisement a 64 page book, "Game Farming for Profit and Pleasure," is prominently featured. You yourself should have a copy of this book. You should also have, if you are not already supplied, some of the really valuable Hercules sales builders—window display, electros for newspaper advertising, etc.

Write for a copy of the book and, if you want them, the sales helps also.

HERCULES POWDER CO.

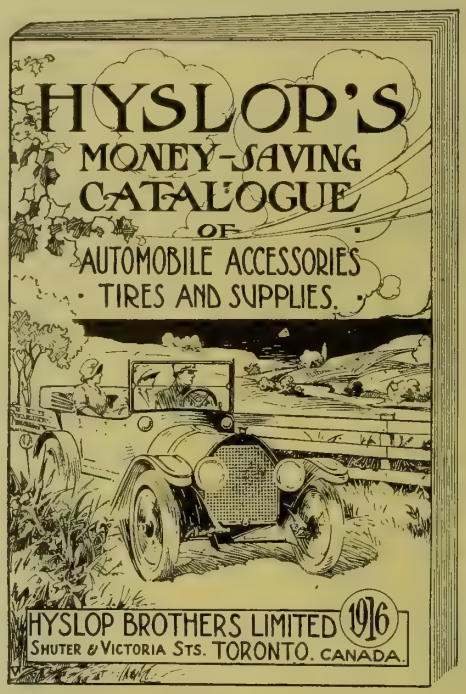
Hardware Dealers: Increase Your Profits—



Sell Automobile Accessories

There is no other line which offers hardware dealers as large profits and quick turnover of stock as Hyslop automobile accessories.

The rapid increase in the use of automobiles has created a steady demand for accessories, tires, oils and other supplies in every section of the Dominion.

Hardware stores are the logical distributing channels for such goods, and the dealer who stocks up with the proper assortment will get the business.

Our stock of accessories, tires and supplies for automobiles is the largest and most complete in Canada, ensuring prompt shipments.

Send for our 1916 catalogue of Automobile Accessories, Tires and Supplies. A copy will be forwarded to you by return mail, together with Dealers' Wholesale Net Price List. The large margin of profit as represented between our list and wholesale prices will convince any hardware dealer that he *cannot afford* to miss this chance to make some easy money. The Spring season will soon be here and the quicker you get started the better it will be. Write at once for catalogue and special wholesale proposition.

HYSLOP BROTHERS, LIMITED, TORONTO, ONT.

TRADE MARBLE'S MARK SPECIALTIES FOR SPORTSMEN

QUICK SELLERS because well and favorably known—and constantly advertised. TRADE-BUILDERS because they possess that QUALITY which gives utmost satisfaction and makes tongues wag in endorsement.

Our catalog shows more than 60 distinct specialties and the famous Game-Getter Gun, particularly strong on axes and knives. Ask your jobber, or write for catalog.

TRADE MARBLE'S MARK Ideal Hunting Knife

The first knife designed by Mr. Marble. Its quality, combination of excellent features and beauty of design and finish, won for us a world-wide reputation as makers of the highest quality of hunting knives. Blade is adapted to sticking and skinning. Oval-ground at back of point for chopping bone. Handles are stag slabs or leather discs with discs of red and black fibre and brass, driven on the strong tangs and held by stag tip and flush nut.

LIST PRICES, INCLUDING SHEATH.
Liberal discount to dealers.

Leather Handle 5-in. blade, $2.25 6-in., $2.50
7-in., $2.75 8-in., $3.00

Stag Handle ..... 5-in. blade, $2.75
6-in., $3.00 7-in., $3.25
8-in., $3.50

Marble's Woodcraft Knife

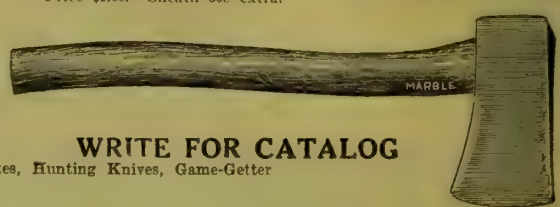
A knife for all hunting and camping needs. Shaped right for sticking, skinning, cleaning, slicing, breaking bones. Thick back-tapering bevel blade carries strength from handle to point—serves purpose of thin blade, yet has surplus strength found only in heavier and costly knives. Just the type of knife that expert hunters prefer. 4½-in. blade of Marble Quality steel. Laminated leather handle. With sheath, $1.50. Order a supply from your jobber.

Marble's Camp Axes, Nos. 9 and 10

An absolute necessity in every hunter's and camper's outfit. Small in size, yet capable of serving every purpose of a full-size axe. The blades are forged from solid tool steel. The tempered head, designed for driving stakes, spikes, etc., will not become battered, even under continuous service. The accurately machined eye is fitted perfectly by the handle, and is constructed to give the greatest amount of bearing surface on the handle, thus eliminating all liability of the head working loose. The nail puller of No. 10 has tempered jaws. These are features that are exclusive in Marble's tool-steel axes. The thoroughly seasoned, selected hickory handles offer a very secure grip and allow the axe to be easily inserted or removed from the sheath.

No. 10 Camp Axe
Blade 3¾ x 5¼ in. Weight 28 oz. Handle 16 or 20 in. Price $1.50. Sheath 50c extra.

No. 9 Camp Axe
Blade 2⅞ x 4¾ in. Weight 22 oz. Handle 14 in. Price $1.00. Sheath 50c extra.



TRADE SUPPLIED BY JOBBERS **WRITE FOR CATALOG**

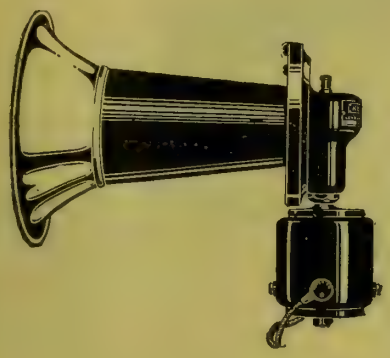
The Sound of the Klaxon is the Sound of Bigger Profits



KLAXON Horns, like Northern Light Lamps and Northern Six Batteries, are a money-making, business-building line for hardware dealers to handle.

KLAXONS are the most thoroughly reliable and widely known warning signals on the market to-day. You don't have to argue a prospect into buying a KLAXON. Simply show him the style he needs and the sale is made.

Now is the time when automobile owners will be fixing up their cars for the coming season and if you carry the right line of automobile supplies you stand the best chance of getting the most business in your district.

There is a KLAXON for every kind and size of automobile — for trucks, motorboats and motorcycles.

The KLAXON type "L" is used on high power cars where electric current is available. It has the advantage of getting the signal ahead and away from the driver.

The HAND KLAXON is in big demand for smaller cars that have no batteries or electric lighting systems.

This is the time for you to put in your stock of KLAXONS, for the spring will soon be here which, as you know, is the "open season" for automobiles and motorcraft.

At each of their distributing houses, the Northern Electric Company carry a complete line of electrical specialties for Automobiles, Motorboats, Motorcycles. This line includes:

Complete line of KLAXON Horns.

Northern Ignitor Batteries. Northern Light Lamps.

Patterson Battery Sets. A. C. Rectifiers.

Trouble Lamps. Flashlights.

Pittsfield Spark Coils, Plugs, Timers, Magnetos.

Stewart-Warner Speedometers.

Wagner Battery Charging Converters.

SPECIALTIES WITH TREMENDOUS SELLING PUNCH

Nowadays only the unusual in quality, in design, in price, sells.

By "sells" we do not mean simply a sale occasionally, but heavy demand that makes for constant selling and steady repeat sales.

The Presto Line of Electric Specialties, because of its wide variety and irresistible need, enjoys a consumer and dealer following that is second to none in the field.

Every kind of specialty the motorist may want can be supplied in the complete Presto Line—dash lamps, cigar lighters, trouble lamps, dashboard switches, anchor type connectors, lamp sockets, lamp adapters and other specialties.

Fortified with this complete quality line the dealer has the basis to build up a strong, profit-producing, ever-expanding trade. Write for complete catalog, prices and discounts.

The Ross Rifle

makes an "easy mark" of big game

·280 Calibre
High Velocity···

Ross Rifles are wonderful in their power, accuracy and reliability.

B. K. Miller, Wild Rose, Wis., U.S.A., says: "I have hunted and fished in various parts of the world, including British East Africa, but I have never seen a gun the equal of the Ross .280 for big game."

Ross Rifles have established a name for themselves by their excellent work at international and other matches, and their power to anchor the largest game, which makes them quick and easy sellers.

Take advantage of the widespread movement in favor of better training for boys and men in rifle shooting by pushing the sale of the Ross Cadet Rifle (adopted by the Canadian Government for Cadet Corps).

There is a ready sale for this rifle in every community.

Ross Rifle Company

QUEBEC

You Can't Go Wrong

You can't go wrong in doubling your order for O-Cedar Polish. All the year round, but particularly during Spring Housecleaning, O-Cedar Polish is used by every housewife in every part of her house. You should sell several bottles to every one of your customers. You only need to display

O-Cedar Polish
(MADE IN CANADA)

to get big sales. Our national advertising campaign has made it familiar to every woman. She uses it to clean and polish her woodwork of every kind, her hardwood floors, her piano and all her furniture. She knows what it will do and will have no substitute. Just let her know you have it and you will get her order.

D.S.C.

Bright Light Stove Polish

Bright Light is prepared from the best English lead and Japan which produces a brilliant lasting polish that will not speck nor turn white. Put up only in our patent box to protect the fingers from coming in contact with the paste.

Every box is hermetically sealed, so that the polish will not dry out. Packed in quarter gross cases.

Our D. S. C. Repair Outfit

Will repair any inner tube, whether auto or bicycle; always handy; fits the pocket; everything in it of the very best.
Contains:

1 piece of Pure Rubber Patching
1 piece of Sandpaper
1 box of Talcum Powder
1 piece of Adhesive Canvass
1 tube of Eagle Cement

Ordorless Jet Enamel

for Stove Pipes

Will not burn off. One coat will give a beautiful ebony finish; dries quickly, and will preserve stove pipes from rusting. Especially adapted for registers, grates or iron where a high finish is required. Put up in six-ounce bottles, handsomely labelled, with cork neatly dipped makes an attractive package. Packed 3 dozen in a case.

Best Harness Oil Dressing

Is a paste combination of Neatsfoot and Wax so blended as to give a waterproof that will keep the leather soft and pliable. Put up in pound tins, handsomely lithographed. Packed three dozen and one dozen wood cases.

Eagle Rubber Cement

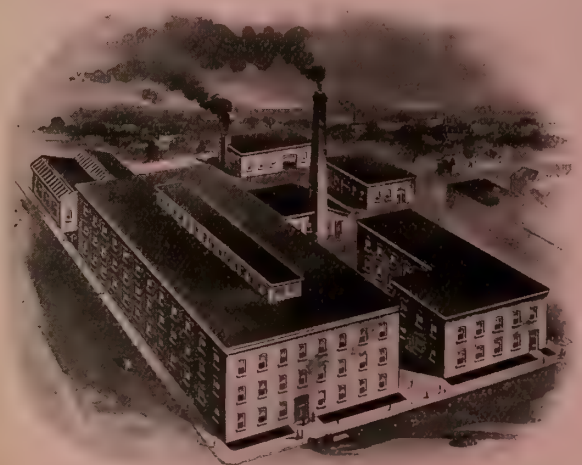
Is recognized by all dealers as being superior to any rubber cement (except our D. R. C. Brand), and is handled by all dealers in such large quantities that we are able to sell it at a price which, considering quality, defies competition. Put up in all styles.

Staon Stove Pipe Enamel

It is a union Japan of extra quality, and is recognized as being superior to any other union Japan on the market. Staon will stand a high temperature, dries quickly, and has no offensive odor. Put up in air-tight tins in three sizes. Labelled with a three-colored varnish label. Packed three dozen to a case.

Staon Stove Paste

Is a compound made from pure Ceylon lead, gives an excellent black shine that will stand over eight hundred degrees of heat without burning off. Put up in penny lever tins, straight sided, so that the polish may be removed very easily without waste. Attractive package, three-color lithographed varnish label. Packed 3 dozen in wood case.



Dominion Specialty Company, Limited

Hamilton, Canada

If interested, tear out this page and keep with letters to be answered.

Ideal Silver Cream

It will clean more silverware in less time, with less expense, than any other preparation made. "Ideal" is not an electro-plating preparation; removes nothing but the dirt, leaving the silverware like new. Put up in eight and eighteen-ounce bottles, packed three dozen in case.

Satin Gloss Harness Dressing

A self-shining dressing of exceptional quality for use in finishing new and old harness, and also the best dressing for general use. It is the blackest and produces a beautiful soft, satin gloss finish, for buggy tops, saddles, fly nets, trappings, etc. Especially adapted for bench work. Put up in cans, kegs and barrels.

Very Best Stove Pipe Enamel

It's a Union Japan and is superior to any stove pipe varnish where quality, quantity and price are taken into consideration. Put up in half-pint and pint bottles, with cop and brush.

RE-NU-AL Wood Polish is not a varnish nor does it leave any coating on the surface, merely removes the dirt and brings the original finish back to the varnish. Removes scratches or burnt spots and will clean any varnished wood-work from the cellar to the attic better and with less labor than any other preparation.

When it comes to *Blacking Enamels and Rubber Cement* you cannot make a better step than buying from us. We say this with confidence because our goods have always given the best of satisfaction, and they pay a very substantial profit.

Send us a trial order now.

Klondike Metal Polish

The Monarch of all polishes; imparts a brilliancy to all kinds of metal. It will clean quicker and leave a brighter finish than any other. Made in black and white.

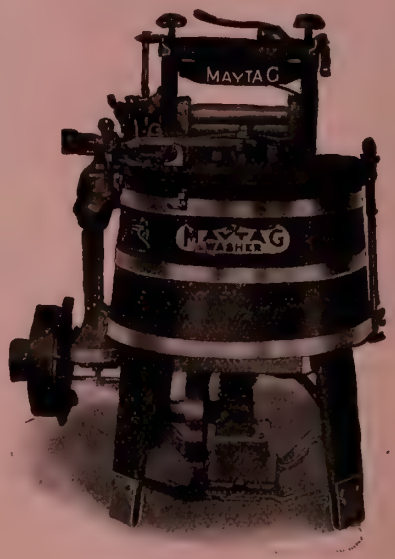
The Maytag Multi-Motor Washer

Announcement Extraordinary!



What the Maytag Multi-Motor Washer Will Do

It operates the washer and wringer. It will operate the sewing machine, churn, cream separator, food chopper—or any group of small machines—that do not require more than ½ H.P.

Now Ready! Something entirely new! Looks good—"makes good"—sells on sight! Every woman wants one! No competition! Only Multi-Motor Washer on the market!

The secret is in the light, powerful, compact little motor that is mounted right on the washer—burns gasoline, kerosene, gas or alcohol. Guaranteed for THREE YEARS.

The price fits the moderate purse, but puts a generous profit in your pocket. GET SOME OF THIS GOOD BUSINESS. Be the FIRST one to supply the demand in your town.

Now, listen! Some live, progressive dealer in your territory is going to make **BIG MONEY** handling the Maytag Multi-Motor Washer—and it might as well be **YOU.**

You positively **CAN** sell this washer and, **if you don't,** your competitor will—and pocket the profits. Remember, the proof of progressiveness is showing new things **FIRST.** This Washer is the same as our regular Power Washer we have sold for years, except that it has attached under the tub a ½ horse-power, 2-cycle air-cooled engine.

The Merchants Hardware Specialties, Ltd., at Calgary, sole agents for Alberta. If in business in Alberta, write them.

The True Canadian Ware

One of the strongest appeals possessed by our "King George" and other patterns is its "All-Canadian" quality. This distinctive ware is the product of Canadian designers and craftsmen, of a Canadian factory backed solely by Canadian capital.

In addition to this exceptional selling feature, this ware is so attractively designed and so well finished that it will sell on merit alone. The large profits this all-Canadian product offers should induce you to write for prices.

JUST A MOMENT, SIR!

Will You Kindly Take Time To Read This?

St. Bazile de Portneuf, in the Province of Quebec, is not a very large place, but it is most important in one way that you should not lose sight of.

In this town there is a factory devoted to the manufacture of brooms. It is an up-to-date factory, equipped with the most modern machinery. The operators are experts in their line — the best that can be obtained.

The corn used in these brooms is the finest that America produces, carefully selected—of a quality that cannot be surpassed.

As to price you will find that it is possible to purchase as good brooms as you now have for less money or better brooms for the same money.

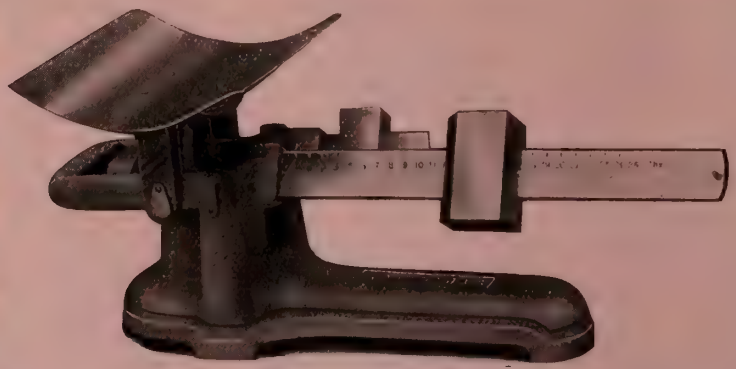
If you have not seen this line you have not seen the best that's offered in brooms.

Write to-day and let us send you full particulars and prices.

American Broom Works, St. Bazile de Portneuf, P.Q.

THE FINEST SCALE MONEY CAN BUY

Offered this Month at Less than Half Regular Cost



It's a FAIRBANKS SCALE Made Exclusively for Us. Capacity 26 lbs. by ozs.

It is Not Hard to Make Ice Cream

but certainly there is a knack in making the best ice cream—that product that is the most delicious because it is firm and uniformly smooth and velvety in texture.

In making ice cream it is essential that it be thoroughly stirred and beaten while being frozen; in making the best, the knack is to give the cream three movements in place of the usual two—in other words, to do it

with the WHITE MOUNTAIN Freezer

The Only Triple Motion Freezer on the Market

Strong and durably made:
Sound tubs—Malleable castings — Strong cans heavily coated with tin.

Simple and easy to operate:
Cream frozen by this method takes only three minutes.

Clean and Sanitary:
Can, dashers, etc.—all removable for washing.

Made in all sizes—one to suit every requirement.

Summer days are ice cream salesmen; let them sell freezers for you

"The Best Lamp I Have Ever Used"

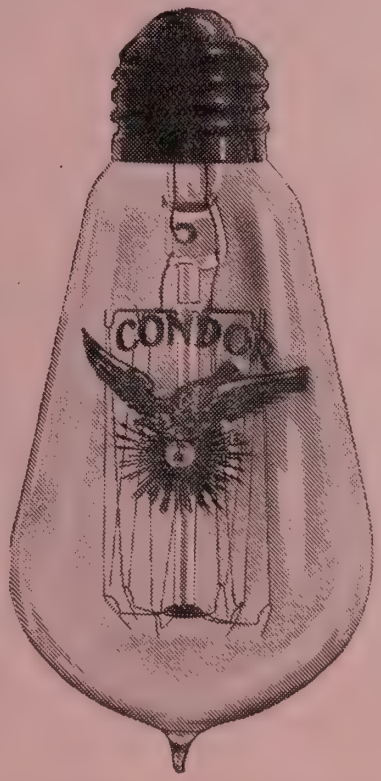
That is what a good many of our dealers tell us they hear from their customers, who are regular users of "Condor" Lamps. All lamps are judged by the service they give and it is this service that is building the reputation of "Condor" Lamps. It is this service that you sell every time a customer buys a "Condor" Lamp from you.

CONDOR Reflector Lamps

A concentrated spiral filament lamp of very rugged construction that will stand jarring and vibration.

You save money by substituting smaller watt CONDOR reflectors for larger watt regular type. You get more for your money by getting more light.

The "CONDOR" Reflector will give ABOUT TEN TIMES AS MUCH LIGHT downward as a regular Tungsten lamp of the same wattage.



NITROGENS

Everything that modern science can produce is at the disposal of our factory to make CONDOR lamps the brightest, longest lived and most efficient, so **you** can sell them better and so your customers will get such satisfactory service from them that they will always be CONDOR users.

But for all this we have not advanced the prices; as a matter of fact you can buy CONDOR Nitrogen, Tungsten, Reflector and Carbon lamps as cheap as a good many other brands that give **less service.**

If you're not a CONDOR dealer, why not? We guarantee price, shipments, quantity and quality. Get the latest CONDOR price lists.

No advance in prices. Quality considered our prices can't be beaten. Let us send them. Ask us about Carbon Lamps.

Make Every Customer A Carborundum Purchaser

EVERY man has his own idea of razor stropping. Just tell him how a few strokes of his razor on the corrugated side of a Carborundum Strop will keep that razor in better cutting condition. ¶ The smooth side will give a keen, hair-splitting, non-pulling edge. ¶ It's up to you, Mr. Hardware Dealer, to give him a demonstration—to point out the advantages of having two strops in one. Show him the quality of the leather—it is genuine shell horsehide, specially tanned and prepared. Incidentally, just mention the trimmings and novel attaching devices. Let us help you with your Carborundum window. It will increase sales.

Lithographed cut-outs and sales helps furnished upon request.

The Carborundum Company
Niagara Falls, N. Y.

BT POWER WASHER AND WRINGER

Here's a machine that will increase washer sales.

The increased use of electric power predicts a rosy future for it in our cities and towns. There is power in some form on almost every farm, so the outlook in rural communities is equally bright.

The BT Forest City, fitted with electric motor or for gasoline engine, is just the machine the trade has needed.

A SIMPLE MACHINE

There is less machinery and fewer working parts on this machine than on some hand washers. It is so simple that it hardly looks like a power washer at all. Note that the top of the washer is almost level. There are no exposed parts, no cog rack running across the lid, no awkward arm at the side of the tub, no dangerous shaft or chain. The parts are few in number, compactly designed and perfectly enclosed. This is just the type of power washer that is needed in the home.

SOME HANDY FEATURES

One handle on this machine, shown just beside the wringer, controls every operation. A simple turn will stop or start the washer, make it wash and wring separately; make the wringer run in one direction or reverse and run in the opposite direction. This handle gives such complete control and the machine is so simple to run that any woman or girl can operate it. In case of accident in the rolls, she can stop the wringer instantly.

NO DELAY WITH THIS MACHINE

While one tubful of clothes is washing another can be wrung out of the rinse water. It is not necessary to wait till the washing is done before starting to wring.

The moment the lid is opened the washer stops. When the lid is closed again the washer automatically starts. There is no need to stop the motor or engine to put in or take out the clothes.

There is a faucet beneath the tub to drain it and a galvanized drain board provided, so the washer does not need to be tipped. This is a very desirable feature, preventing a lot of slopping and insuring proper drainage as well as lightening the wash day's work.

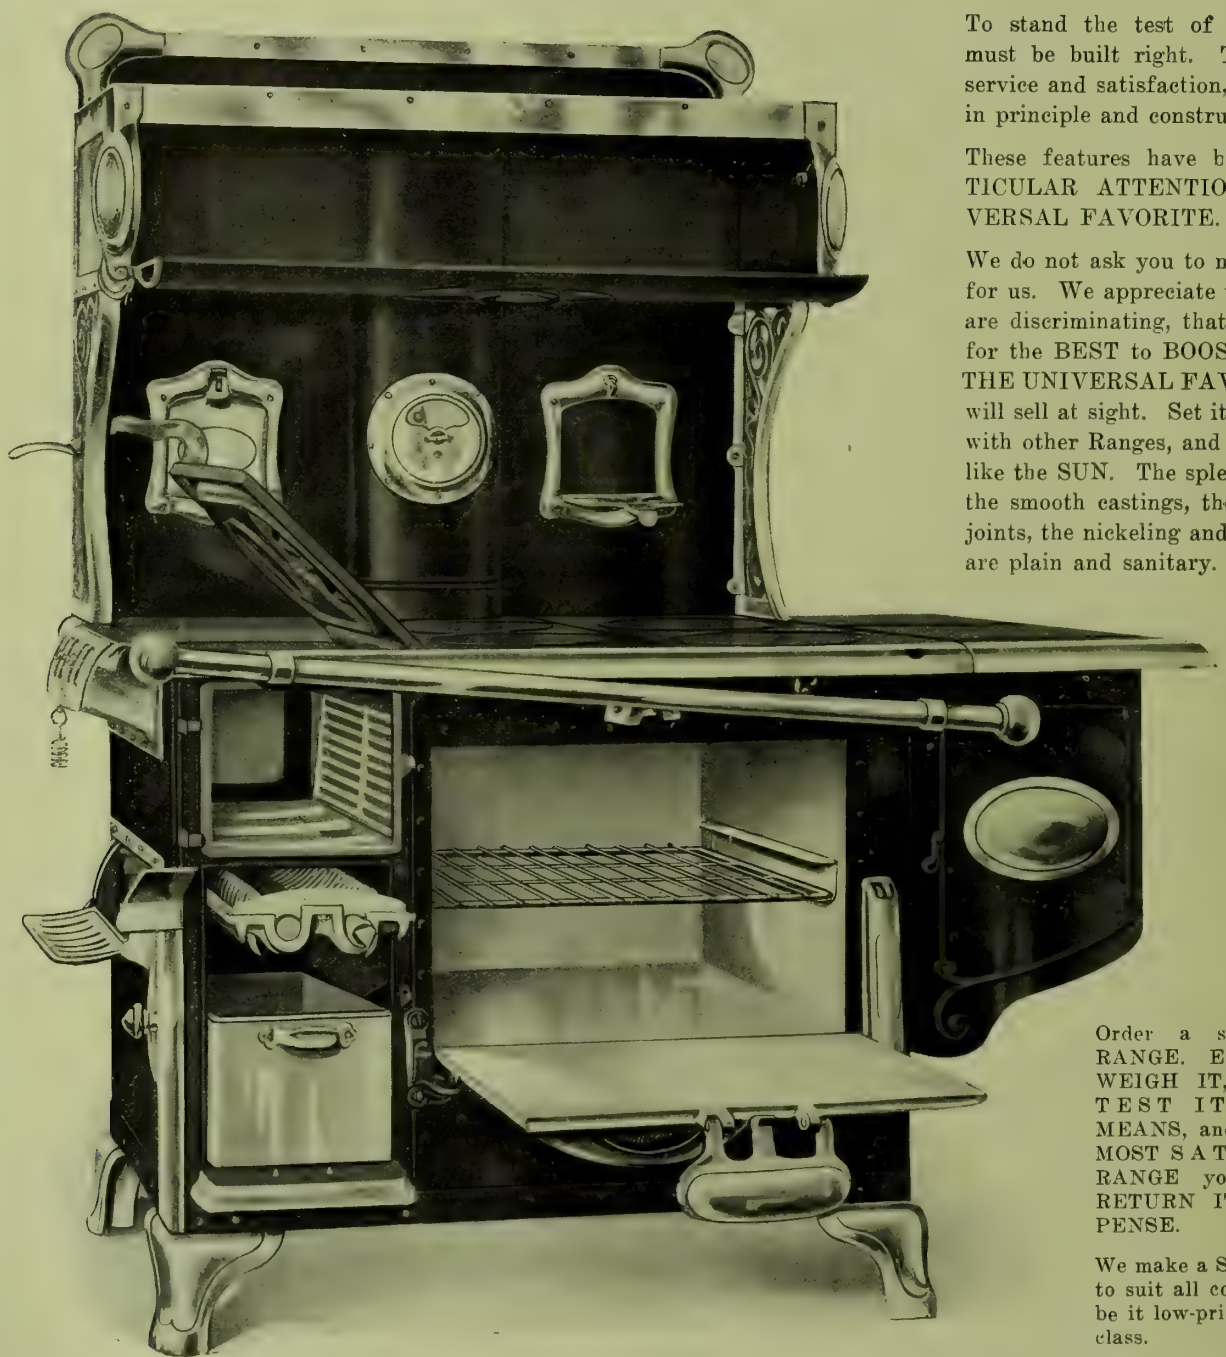
Appearance—Long Service—Convenience

The idea carried out at every step in the manufacture of

Universal Favorite Range



To stand the test of time a RANGE must be built right. To give constant service and satisfaction, it must be right in principle and construction.

These features have been given PARTICULAR ATTENTION in the UNIVERSAL FAVORITE.

We do not ask you to make experiments for us. We appreciate the fact that you are discriminating, that you are looking for the BEST to BOOST your business. THE UNIVERSAL FAVORITE RANGE will sell at sight. Set it up in your store with other Ranges, and it will stand out like the SUN. The splendid appearance, the smooth castings, the perfectly fitted joints, the nickeling and decorative parts are plain and sanitary.

Order a sample of this RANGE. EXAMINE IT, WEIGH IT, MEASURE IT, TEST IT BY EVERY MEANS, and if it is not the MOST SATISFACTORY RANGE you ever handled, RETURN IT AT OUR EXPENSE.

We make a STOVE or RANGE to suit all conditions of trade, be it low-priced or the highest class.

The "Sterling" is the Last Word in Furnace Construction

In the modelling of the "STERLING" every advance in the construction of WARM AIR FURNACES was carefully noted and adapted, together with many new and exclusive features, so that the STERLING FURNACE is a HEATER, combining the HIGHEST EFFICIENCY and the GREATEST DURABILITY.

A Few of Its Special Features

The **HEAT APRON** encircling the Firepot inside the Casing is a new departure in furnace construction. This feature enables to guarantee the heating of a **HOUSE** with a saving of 10% in **FUEL.** This is accomplished by the **MARVELLOUSLY EFFICIENT HEAT APRON** utilizing the heat that is radiated and lost in the **CELLAR** from the average Furnace.

LARGE ASHPIT with Square Back.

THE FIREPOT is made in two sections with Deep Cup Joints.

FOUR TRIANGULAR GRATE BARS operated in pairs—Any section can be taken out without the removal of a bolt. **THE RADIATOR** and **COMBUSTION CHAMBER** are perfectly proportioned for air and heat supplies. Has Heavy Cast Iron Top and Bottom with 12-gauge Copper Bearing Steel Sides. The joints are dovetailed and the cement cannot fall out, making the RADIATOR absolutely DUST-PROOF and GAS-PROOF.

COMBINATION DIRECT DRAFT and GAS DAMPER. LARGE FEED DOOR, COMBINATION CHECK and HEAT REGULATOR. THE FRONT OF THE FURNACE IS FLAT, MAKING THE FEED CHUTE UNUSUALLY SHORT.

THE STERLING FURNACE is easy to install because there is **HAND ROOM** for **EVERY OPERATION.** THE DEALER who installs the Furnace will appreciate this, and so will the man who pays for the job, for it takes less time and costs less to install a "STERLING."

MADE IN FOUR SIZES—19-INCH—21-INCH—24-INCH—AND 27-INCH FIREPOTS. THE "STERLING" IS NOT A HIGH-PRICED FURNACE, BUT A HIGH-GRADE FURNACE. SECURE THE AGENCY AT ONCE—IT'S A MONEY-MAKER.

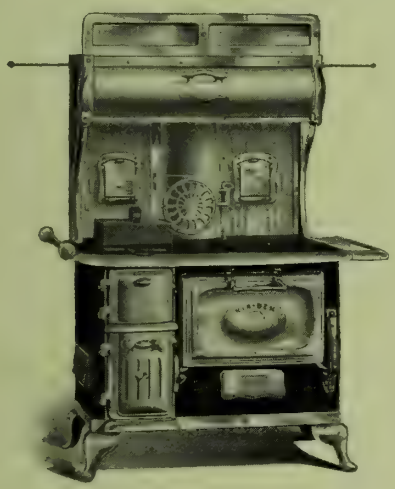
KIR-BEN STEEL RANGE

We announce for 1916 the Kir-Ben High-Grade Steel Range. Shipments have been going forward for the past 30 days and orders now received will have immediate attention.



Quality and construction are the very best and no expense has been spared that would in any way increase the efficiency of this Range.

Kir-Ben interchangeable Reservoir may be placed on either end of the Range and the water will heat quickly with moderate fire. Waterfront has large capacity.

Fire-box is large, Flues are right, Nickelled Rails are detachable, and everything is up-to-date.

Oven is 20½ x 20 x 12½. Top is Kir-Ben sectional style with six No. 9 covers.

Kir-Ben Lines Include

Kir-Ben Furnace for Coal and Wood.

Kir-Ben Furnace for Wood only.

Iron Duke Furnaces for Coal and Wood.

Royal Furnaces for Coal and Wood.

Kir-Ben Registers.

Kir-Ben Cast Ranges, in three styles, each in a full line of sizes and accessories.

Duplex Grates, when reversed, make the finest wood fire-box of any combination coal and wood grate on the market.

Special Wood Fire-box is very large and takes wood 26 inches long.

Supplied with Kir-Ben Economic Damper, Broiler and Toaster, it constitutes the most efficient cooking apparatus ever offered for domestic use.

NOT A GAS RANGE

Eyes have they—the women

—and that accounts for the sales records that hardware merchants are making with this wonderful Lighter Day Range.

A glance shows the women that they need never stoop to attend to this high oven range. This is what they see:

The **High Oven** that does away with tiresome stooping on bake days.

The **fine novel appearance,** the plain nickel—the sanitary porcelain enamel.

The **glass oven door,** particularly handy because it is at standing height.

The **heated warming closet** in a new handy location.

The **inside pot-holes** to keep cooking odors from spreading.

The **thermometer** and cooking chart at standing height.

The **large storage** for pots and pans.

The **clear sweeping space.**

The **toasting lever** to raise the whole front section of the top.

The **handy towel rack.**

The **high shelf** in addition to the warming closet.

The **long fire-box** for burning wood.

Order a Lighter Day Range and place it on your floors. Your customers will prove absolutely its powerful selling value.

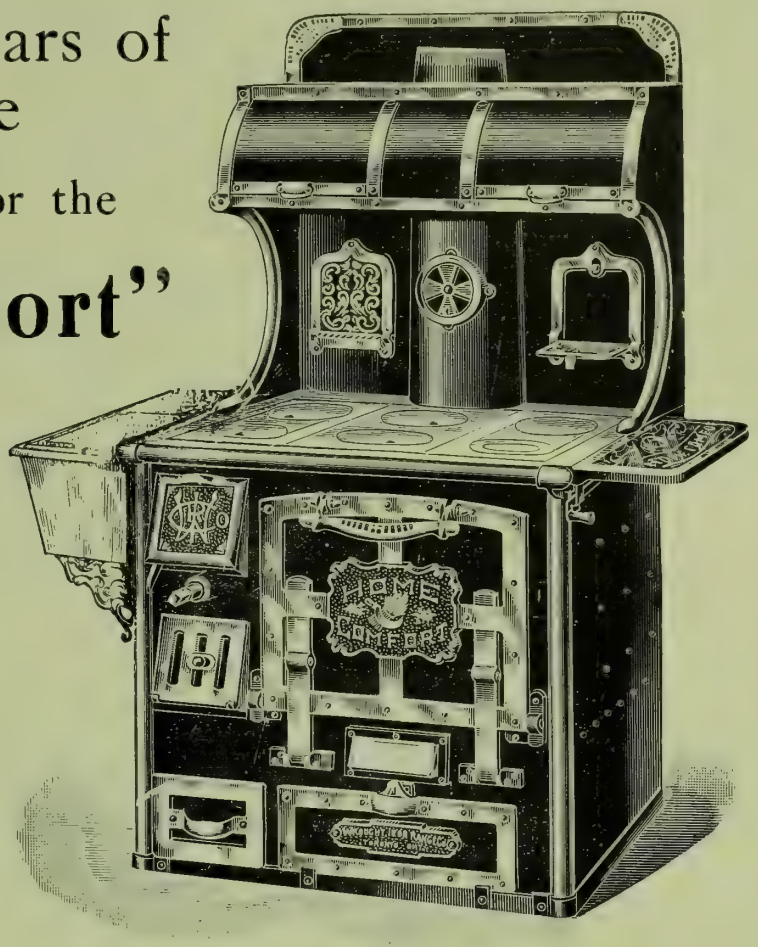
Over Twenty Years of Good Service

is nothing unusual for the

"Home Comfort" Range



For the past fifty years this range has been sold direct to the consumer, but the policy of this company having been changed, we are now offering the Home Comfort Range for sale through the trade, which policy will be maintained in the future. Would it not be advisable to inquire if your territory is still open?

Study this splendid construction

MATERIAL. Range is made from the best quality of open hearth, close annealed, cold rolled steel, and trimmed with the best quality of soft annealled malleable iron, making a practically indestructible combination.

BODY. Body is made of 16 gauge open hearth, close annealed, cold rolled steel, in one piece.

OVENS. Ovens are made of 14 gauge open hearth, close annealed, cold rolled steel, with 12 gauge bottoms of the same material, heavily braced with malleable iron to make warping impossible, also having heavy malleable frames at the back and front of oven which are closely rivetted to the body of range, and greatly increasing the strength and durability of both.

FIRE BOX. Fire box of range is lined throughout with heavy grey iron castings, having projections that retain the fine ashes and thereby increase the extraordinary enduring qualities of these linings.

GRATES. Grates are of the heavy duplex pattern, so designed that it is practically impossible to break them, or put them out of order in any way, and so arranged that they need only be reversed for burning wood.

WARMING CLOSET. Warming closet is made of highly polished steel, with double rolling doors, which may be left open at any time without inconvenience.

TANK. 16 oz. copper contact heater adjustable on front of range.

NICKLE PLATING. All nickle plated parts are of the very best quality obtainable, and made plain and easy to keep clean, the whole making a highly ornamental effect.

GUARANTEE. The working qualities of the range are fully guaranteed under reasonable draft.

A PURELY CANADIAN PRODUCT

There's no better way to a satisfied stove trade, than the selling of the "Home Comfort" Range—over fifty thousand now in use.

WISS SHEARS and SCISSORS Stay Sharp

Goods That Stand Abuse

SHEARS of various kinds are called upon to withstand many hard tests, one of the most severe of which is cutting the fabric used in automobile tires. This fabric is full of talc and other substances that are very injurious to the cutting edge of a pair of shears, and unless the temper of the two blades is absolutely perfect the shears will stand up but a short time.

The automobile tire business is now a very large one, and conducted on highly systematized and efficient lines. Tire manufacturers employ none but the tools and equipment which prove by test to produce the best results at the lowest possible cost. They naturally seek out the shears which will give them the best results, and stand up longest under the heavy and exacting work they are called on to do.

Ninety per cent. of all the shears used by the tire manufacturers of America are Wiss shears—a tribute to their quality which we do not need to emphasize or enlarge upon.

It is true, perhaps, that the sale of shears to tire manufacturers is of no direct interest to you. But you are interested in the fact that all Wiss shears and scissors, no matter for what purpose intended, are as well made, as reliable, as superior as Wiss rubber shears are. We do not advise or invite abuse for Wiss cutlery—but it will stand it, we believe, better than any other cutlery on earth!

* * *

Most of your customers earn their money. Therefore every dollar they spend over your counter represents the most precious of all things—life itself—for they have given a portion of their lives in exchange for it. Isn't it your bounden duty to give them a fair equivalent for it—the very best value you possibly can?

A Severe Test

A SHORT time ago one of our experts was called into consultation with the repair department of the New York Telephone Company.

In a certain branch of repair work shears are used constantly by about 40 operators, and the work the shears are called upon to do is extremely hard and exacting. The foreman in charge explained the nature of the work, and declared that every known make of shears had been tried on it. Wiss shears, he added, stood up under the strain far better than any others.

Naturally, the chest measurement of the Wiss man swelled perceptibly at this, and he asked how long Wiss shears stood up.

"Two hours," replied the foreman. Then he laughed. "Don't look so downcast," he said; "no other shear than the Wiss will stand the pressure for more than fifteen minutes!"

After some experimenting, the Wiss expert found a way to make shears that will do the work and stay sharp nearly two days instead of two hours—a really wonderful forward step in the manufacture of shears of this type.

It is no small achievement to make shears that will stand such frightful abuse as they must in this telephone work—and from that all the way down to the daintiest scissors for "milady's" personal use. The Wiss way does it; and every pair of shears or scissors, no matter for what purpose intended, is, we firmly believe, the best that is or can be made.

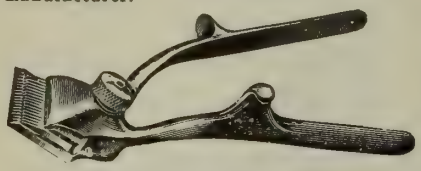
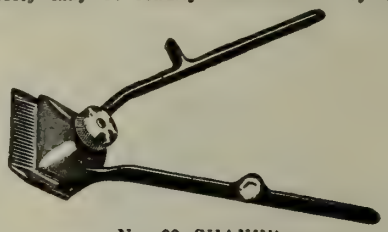
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.

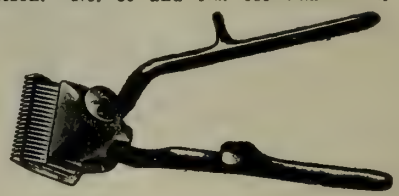
present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



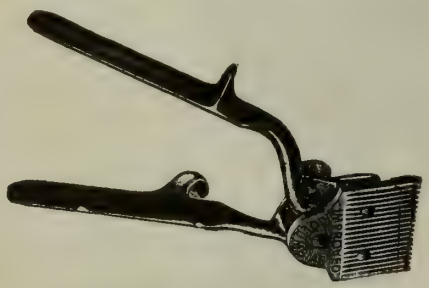
STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.



No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.



SPEED
Best low-priced Clipper made. Retailing at about $1.00.



IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.

If you are not familiar with these goods, send for samples and compare them with others.

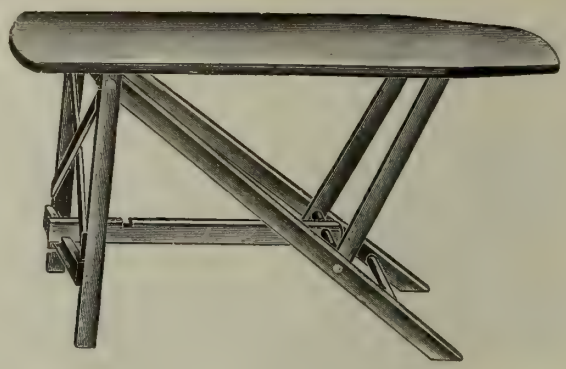
Royal Globe Wash Board

This is our best selling Zinc Face Wash Board, made of good clear lumber with light back, lock corners, and a wide splash board.
We make also the Solid Back Globe, Glass Globe, Pony, and the new Queen City Globe, a cheap yet good board with a tin washing plate, substituting the zinc.



Daisy Ironing Stand

Made from selected lumber and guaranteed to be one of the most rigid on the market.

McFarlane's Household Step Ladder

This step ladder is the cheapest ladder that we are making. We consider it the best ladder on the market to-day for the price. It is made of Yellow Pine and nailed together. The casting on this ladder is a one-piece, pressed steel casting and is securely fastened to the sides and top. The rack on the ladder is always up when the ladder is closed, and horizontal when in use.

Stock sizes, 4 to 8 feet.

Quality, Value and Service

Verandah and Lawn Furniture, etc., etc.,

are on the selling line.

McFarlane value creates a desire for more that will greatly boost your sales. It's a prestige builder.

CATALOG OF COMPLETE LINE UPON REQUEST.

It will pay you to drop a card for it now.

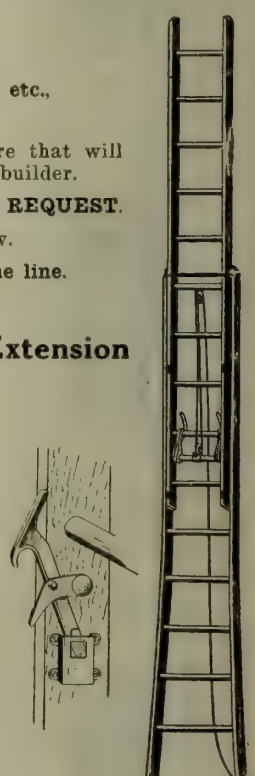
All reliable jobbers sell the McFarlane line.

Boys' No. 44

This is a cut of our Boys' Sleigh No. 44. We are making a complete line of boys' coasters and girls' sleighs. Also a superior line of steel flexible coasters. Get our illustrated price list before placing your order.

No. 2 Folding Chair

This is the most popular folding chair on the market. It is made of the best grade beech lumber. Good heavy duck is inset in backs, well stitched and hemmed on edges. Color of canvas back, green and white stripe. Well finished with a good grade varnish.



McFarlanes' Pulley Extension Ladder

This ladder has been our big seller for years. It can be taken apart and used as single ladders. It is self-hooking and self-releasing; is very light and strong, being reinforced with wire cable, let into a groove on the back of the ladder.
The ladder is spread at the bottom to correspond with the length.
Made of Clear Pine and B.C. Fir, Malleable Iron Castings, Rock Elm rungs and nailed together.

Stock Sizes
20, 24, 26, 28, 30, 32, 36, 40, 44 feet. 2 section style, 46 ft; 60 ft. 3 section style.

BIRD NEPONSET PRODUCTS

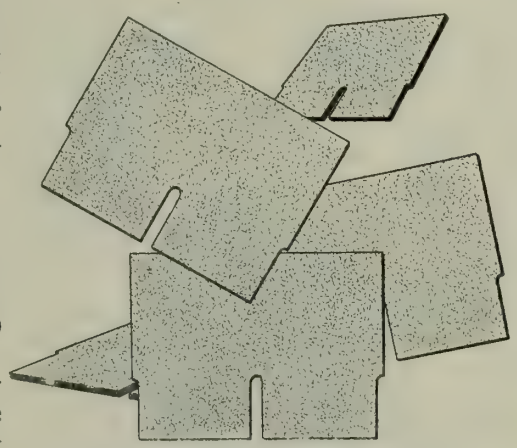
NEPONSET
Products of Highest Quality

"Look for the Paroid Roll"

Here are three outstanding reasons why you should push the Neponset line. First, our vigorous advertising campaign means easy sales; second, bigger profits; third, lasting good-will of customers. Stock the three lines shown for a big year's business.

Paroid Roofing

Thousands of prospective buyers of roofing will be **looking for the Paroid Roll.** Who will supply the demand? Those dealers who stock Paroid and show the roll in their windows and on their sidewalks. Obviously it is the chance of the year for live dealers! Three colors—Red, Grey and Green.



NEPONSET Twin Shingles

Double size shingles, composed largely of asphalt—the waterproofing that will not melt in the hottest sun—and crushed slate—red and green. Truly, the greatest roofing development of the Twentieth Century—durable, fire-resisting, attractive in appearance. One Neponset Twin Shingle Roof sells another.

Neponset Wall Board

Carried two processes further than other Wall Boards. Waterproofed and ready decorated—quartered oak, and cream white. Its merits are being strongly advertised. Stock up to meet the big demand created. Bundles wrapped in burlap, saving breakage in transit.

1916 will be the Neponset dealers' year. Get in line and realize more strongly than ever that it pays now and *for future trade* to sell your customers the better quality goods.

The Children of Purity

Rust-Resistance, Welding Quality, Enameling Property and Electrical Conductivity are the children of PURITY and SCIENTIFIC CARE in iron manufacture.

Chapter IV

ELECTRICAL CONDUCTIVITY

In the field of electrical industry, one of the most fruitful discoveries of modern times was that of the greatly superior conductivity of **super-purified** cathode electrolytic copper as compared with the somewhat less pure anode copper previously employed.

The same principle applies to iron and steel when used as conveyors of electricity. Armco (American Ingot) Iron is found by the great electrical testing laboratories of New York and London to have conductivity 50% higher than that of open hearth steel and fully equal to the purest of Norway and Swedish irons. It has also the companion qualities of high permeability and low residual magnetism.

These characteristics are the direct results of the high and difficult standards maintained at Middletown and Zanesville with respect to chemical analysis and the physical evenness and soundness of every sheet or plate of Armco Iron.

This material is therefore peculiarly adapted to use in the forms of third rails, telephone and telegraph wires and high-tension bus-bars. Its success in the electrical field proceeds from the same causes as its triumphs in other portions of the industrial world.

The American Rolling Mill Co.

AMERICAN ARMCO INGOT IRON

The trade mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

Licensed Manufacturers under Patents granted to The International Metal Products Company.

Armco (American Ingot) Iron, Black and Galvanized Sheets, Roofing, Pipe, Gutter, Metal Lath and Terne Plate.

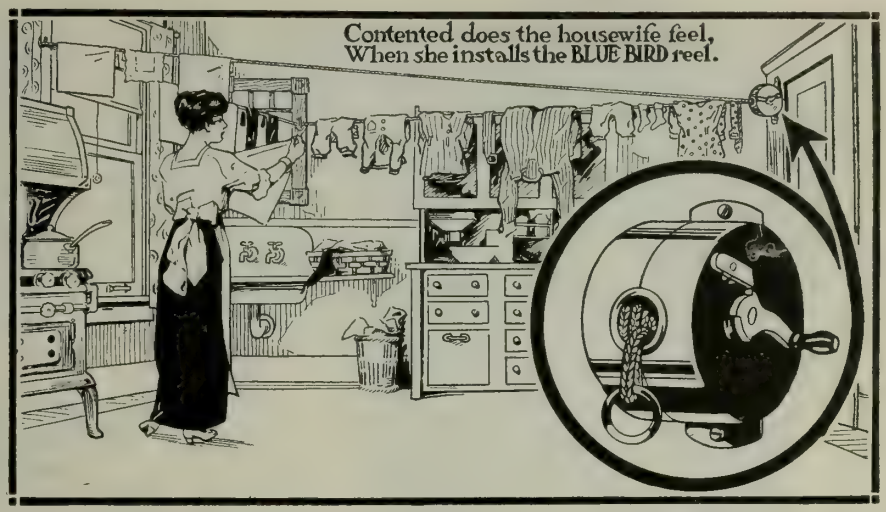
"Blue Bird"

Indoor Clothes Line REEL



WILL PROVE A READY SELLER BECAUSE THE HOUSEWIFE IS ALWAYS DESIROUS OF SECURING AN ARTICLE THAT WILL LESSEN HER WORK AS WELL AS IMPROVE THE APPEARANCE OF HER HOME.

It is a highly sanitary household necessity that serves many purposes and is being sold at a very moderate price. Takes the place of old wooden clothes-horse when ironing. Ideal for sick rooms, nursery, kitchen, bathroom, back porch, etc.

Requires but a minute to draw out line and hang it about as shown in picture. Out of the way when not in use.

HIGH GRADE

Re-annealed Steel used in its construction. Carries a ratchet, making it possible to lock the reel as well as to tighten the line to a point where it will carry 100 pounds or more. Nothing to get out of order. It is guaranteed indefinitely. It is furnished complete with screws and hooks ready to be attached to the woodwork. Can be placed in position with an ordinary screw-driver. Each reel packed in separate carton ready for delivery.

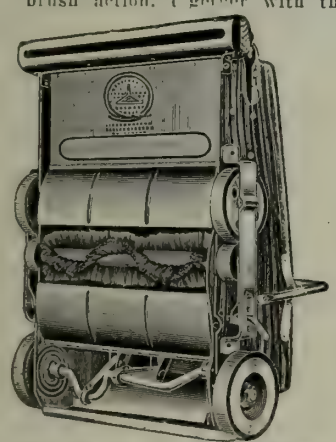
Let us send you illustrated literature and prices.

The HUGRO DE LUXE Combination Vacuum Sweeper

The All-Perfect Sweeper *The All-Perfect Sweeper*

With the Wonder-Worker Automatic Brush Adjustment

Not a heavy, cumbersome machine to be used only for weekly cleaning day, but a light, easy-running sweeping and cleaning device that is used by the housewife EVERY DAY IN THE YEAR without fatigue. This wonderful vacuum sweeper has the new Hugro special and exclusive feature, the WONDER-WORKER AUTOMATIC BRUSH ADJUSTMENT WITH BROOM ACTION. Thus, the brush **automatically adjusts** itself to any carpet or rug. It reaches lightly and firmly down into the nap, taking up all threads and ravellings. This brush action, together with the tremendous suction power which sucks up every particle of dust and dirt, makes the Hugro de Luxe the perfect combination vacuum sweeper.



Patented March 2, 1915, January 25, 1916. Licensed under Kenney Patent, March 19, 1907, No. 847,947.

UNLIMITED GUARANTEE

The exceptional care in construction—the superior quality of materials used, enables us to make this unlimited guarantee. We will replace at **any time without charge** any part defective in workmanship or material. We guarantee the Hugro De Luxe Combination Vacuum Sweeper to be perfect as to mechanical construction.

THIS VACUUM SWEEPER MEETS EVERY REQUIREMENT OF THE MOST EXACTING HOUSEWIFE AND PAYS YOU A GENEROUS PROFIT.

Be our dealer in your city and let us send you the Hugro Boosters and trade winners. They help sell for you and are all Free, transportation paid.

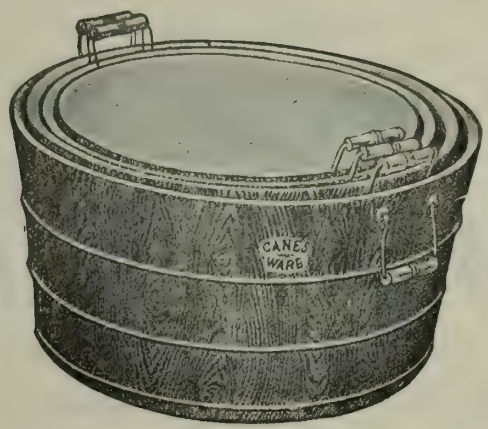
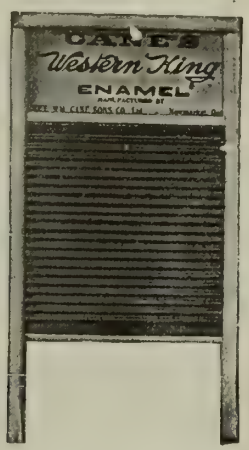
ACME BUTTER MOULDS





The All-Canadian All-Wooden Wash Board

Quality and Price—a big trade attraction

The Cane line embodies **Washboards** (made in 13 styles), **Wooden Pails, Wooden Wash Tubs, Bake Boards, Bread Plates, Mops, Egg Crates, Clothes Pins and other specialties.**

The All-Canadian, All-Wooden Wash Boards are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped wash board sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.

The finest grained hardwood is used for rubbing surface.

Retails at 20c and leaves a good profit.

Standard Zinc, glass and enamel wash boards are always on hand for prompt delivery, until notice to the contrary.

Write for catalog.

It's The Little Things That Count

¶The character of a business is determined by its attitude towards the every-day details—

A Promise of Delivery made and forgotten—

A Customer leaving the Store without having been helped in any way.

These are serious handicaps to Success.

¶The same truth applies to the stock—

No matter how insignificant the item, it ought to receive careful attention.

Does it help to build a reputation for Quality?

Does it help to bring in more business?

Does it contribute its share to the general prosperity?

¶Take Hack Saws—an item small as far as turnover is concerned, but very important in its effects upon the business.

How many Dealers give Hack Saws serious consideration? Probably few, but we believe the majority would if they had the opportunity.

With this in mind, we plan, during the next few months, to give some information regarding Hack Saws which we believe will be helpful to you.

WAKEN UP, CANADA

To the wonderful possibilities that are daily opening up to you. You're the coming commercial centre of the British Empire, if not of the world.

Mr. Hardware Dealer, are you making the most of your opportunities? Are you featuring in your store and window displays, lines that have an every-day sale, lines that do not depend on the building trade or on any trade to create a demand? Are you selling the

Griffith's Horse Specialties

that are being used in your community? The hardware store gets the drivers' trade, gets the teamsters' trade for odds and ends, so why not make this trade as valuable as possible by keeping Griffith's specialties to the fore and by introducing them to every man interested in horses?

GRIFFITH'S HORSE SPECIALTIES are being advertised in the leading Farm Journals of Canada. They are wonderful money-savers. Farmers from all over the country are writing to us for Samples and Literature. Where we have dealers the enquirer is referred to them for attention. In hundreds of localities we are not yet represented.

Beginning with next issue we are going to point out the opportunities that are open for Dealers in ONTARIO. Each week, in turn, we are going to take up the other provinces.

All Dealers should write at once for Catalogs, etc. ONTARIO Dealers should watch particularly for next week's announcement. You may get a little jolt by a message from your own town.

The Manitoba Bridge & Iron Works, Ltd.

Winnipeg, Manitoba

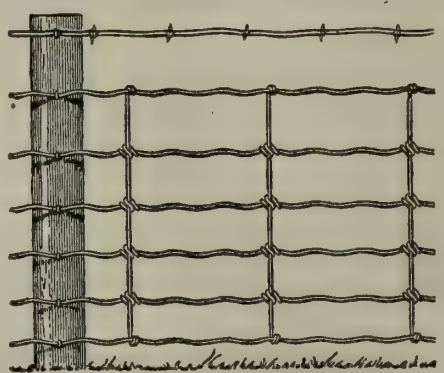
A New Barb Wire, containing all the advantages of the old-style soft Cabled Barb and none of the disadvantages.

"IDEAL" SINGLE STRAND BARB WIRE

is made from a single strand of No. 12 barb steel wire—not soft, common wire and not twisted, and is heavily galvanized—proof against rust.

These qualities of material give it **GREAT STRENGTH AND DURABILITY.** Unlike two strands of soft, twisted wire, it will not stretch and sag. The short, sharp barbs are evenly spaced, four inches apart, and securely fastened.

SELLS FOR TWO-THIRDS AS MUCH AS THE OLD STYLE and you give your trade a superior wire in every respect. It's a money-maker.



The "Ideal" Combination

Illustration showing a single strand of Ideal Barb Wire used in connection with Ideal Woven Wire fencing. This combination makes a very satisfactory and economical stock fence.

You'll get a grip on the fence trade that will enable you to command an unusual large business in a very short time if you sell the

"IDEAL" FENCE

because you will be giving the most weight, strength and service per dollar invested.

The Horizontal Wires have a wave or crimp which gives elasticity and spring to the fence and also provides for expansion and contraction caused by the heat and cold.

The Upright Wires are made of the same quality of No. 9 hard wire and are properly spaced.

The Locks—note how the Ideal lock wraps itself around the two wires, and grips them in five different places. This lock is made of same material as upright and horizontal wires—**they last as long as the rest of the fence.**

Write for full particulars.

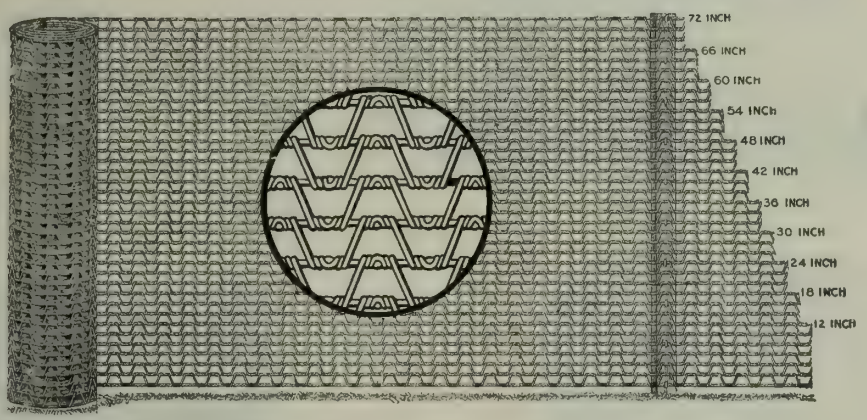
It is Timely to Stock These Spring Lines Without Delay

Those intimately familiar with market conditions hardly require our word of advice—"Buy freely of these lines **now**, while our stocks are complete." Every indication points to this being a highly advantageous time to stock up.
We welcome your enquiries for particulars and prices—they will be well looked after.

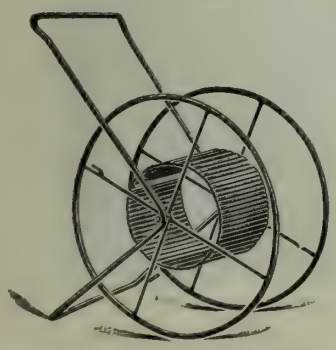
We are agents for the celebrated U.S. POULTRY NETTING



All sizes carried in stock :—
2-inch mesh 12 to 72 inches—1-inch mesh 12 to 48 inches.

Galvanized Wire—all sizes from No. 5 to 16 gauge.
Galvanized Coiled Spring Wire No. 9
Galvanized Barbed Wire—4 pt. 6
Oiled and Annealed Wire to 12 gauge.
Annealed Hay Baling Wire—13 to 16 gauge.
Black Screen Wire in 100 ft. Rolls, 12 to 48 inches.
Black Screen Wire in 50 ft. Rolls, 12 to 48 inches.

Make preparations NOW for Spring business



We name, below, a few lines of immediate interest—

Lawn Mowers, Lawn Rollers, Garden Hose, Grass Shears, Nozzles, Couplings, etc. Horse Clippers. Harvest Tools. Screen Doors and Windows, etc.

SPORTING GOODS

We advise ordering your stocks of Summer Sporting Goods **now.** For **Lawn Tennis, Baseball, Bowling, Cricket, Fishing, Canoeing, etc.**

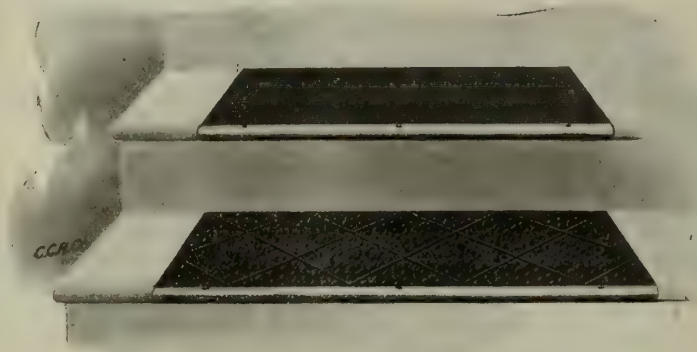
A few suggestions of lines that every hardware dealer should stock

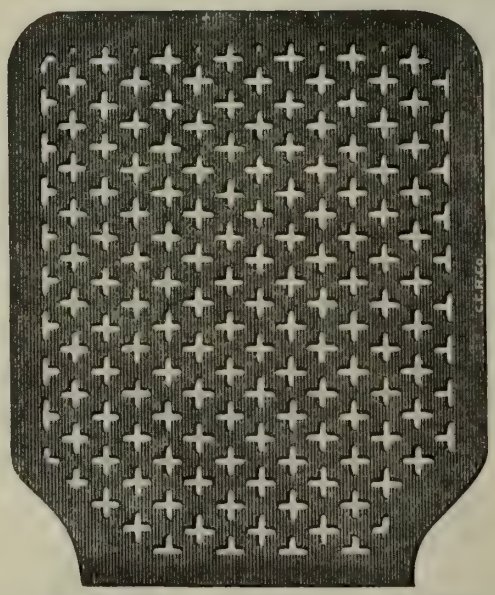


Stair Treads

The use of Rubber Stair Treads is now universal, owing to their non-slipping and durable qualities. They also reduce noise to a minimum, and protect the stair from wear. Treads can be cut from corrugated, pebbled or smooth Matting in any shape or size wanted.

Moulded Rubber Door Mats

furnished in three different designs, with "bevelled" edges as per illustration.



Rubber Drain Board Mats

Made of white rubber, perforated, and also with a corrugated surface. Used with white enamel sinks, the Mat being perforated so as to permit the draining off of the water after dishes are placed on it. It prevents dishes slipping and being broken.

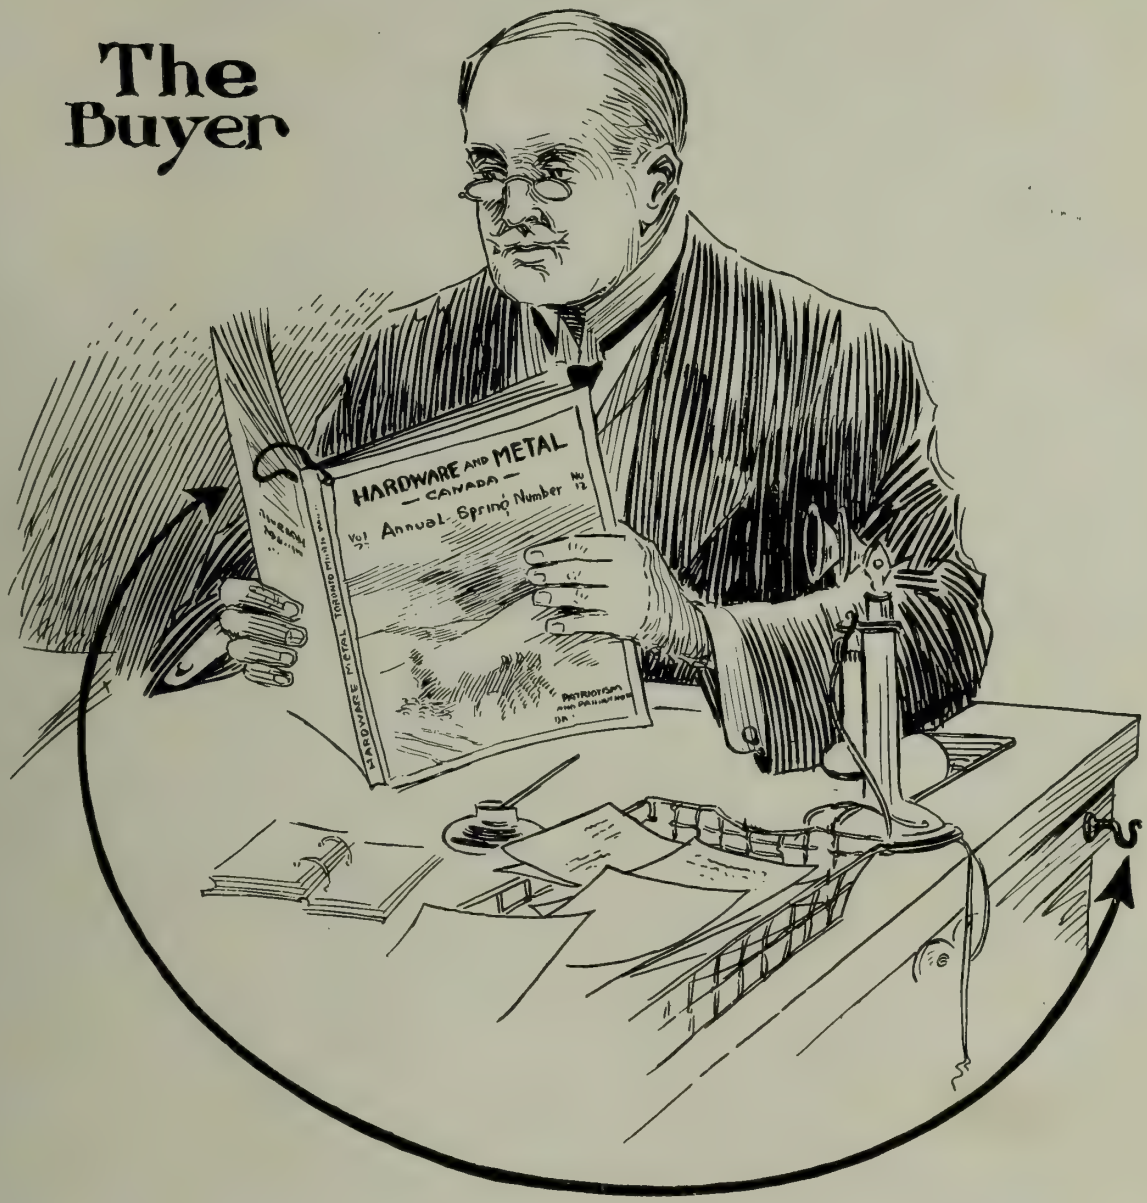
A Straight Talk From The Manager

No. 36—To The Buyer



¶ If there is one man more than another who will benefit from this Annual Spring Number of Hardware and Metal, it is the Buyer.

¶ The Classified List of Advertisements is compiled specially for him. It is the most complete Buyers' Guide ever presented to the Canadian hardware trade. Look up this list whenever you want to know "who makes what."

¶ Many of the special articles give information of vital importance to the hardware buyer. They will stand reading, over and over again.

¶ The hundreds of advertisements each give particulars about many different articles. They will furnish much new information that it is part of your business to learn.

¶ And just so that you may get the greatest possible benefit from this Number, a cord has been inserted in the upper left-hand corner. Use the cord to hang up this issue close to your desk—where you can reach it in a moment, whenever you want to consult it.

An Epic of the North

A Business the Development of Which is Interwoven With That of the Country—Search For a New Home and a Vision—Details of a Business Success and the Secrets of Achievement

WHEN one sets out to describe the processes by which the George Taylor Hardware, Limited, of New Liskeard, Cobalt and Cochrane, grew from the rude shack of twenty by sixteen feet of 1903, to the business of to-day that occupies a floor space of nearly 50,000 feet, it is found that the growth of the business is so closely interwoven with that of the country and so greatly corresponds to it that in a sense, to write one is to write both. The history of the business becomes epochal, the tale itself an epic of a great period in a great country.

The Young "Old Timers" of the North

In a country where five years has seen the development of fifty in more settled communities, and where ten has witnessed the transformation of conditions the most primitive to those the most modern, a man or a family of a few years' residence acquires in the community a prestige that might well requite a generation of good living in more settled districts. Boys scarcely over the chin downiness their callow days and still in the sere and yellow of the twenties, are spoken of admiringly as "old-timers," and as men of weight to whom their gray-bearded seniors gladly defer because they had come up into the Northland in the misty past, years and years ago, all of five.

And the Taylors arrived in 1902. So they are in a class by themselves with the rocks and the trees, the hills and the streams. Especially the rocks. For they are a rugged race.

Seeking An Outlet For Surplus Energies

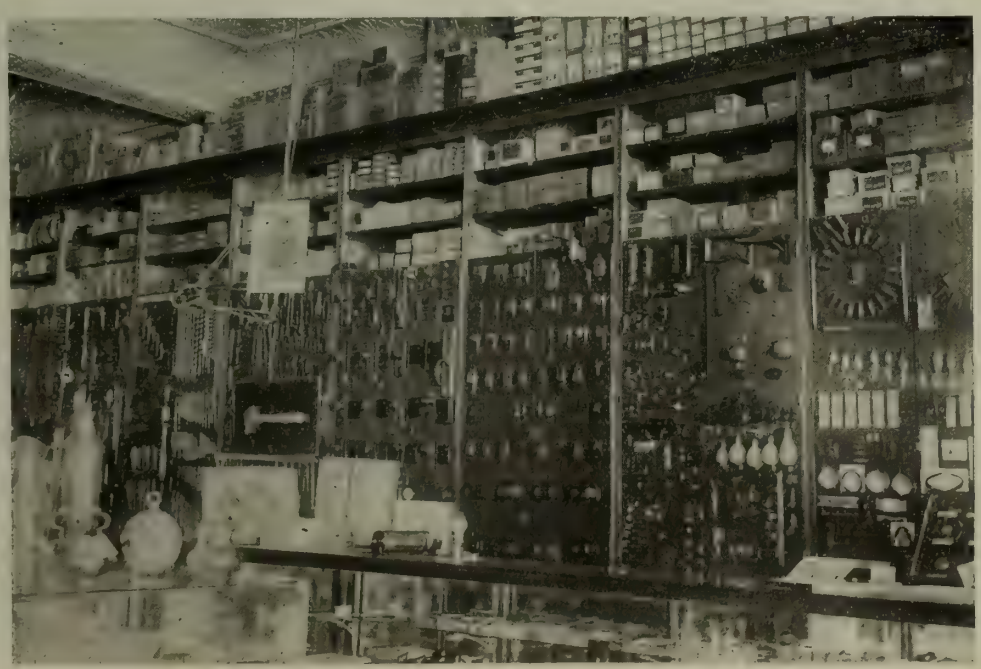
They came from London, Ont., in the old days and George Taylor, the father and the head of the clan was sorely troubled about the future of his growing boys. London seemed too confined in area, too restricted in opportunity to give to them that scope which the increasing evidence of their superabundant energies indicated as rightfully their heritage. And besides he had a veteran scrip he wished to take up.

Taylor pere, had been West in the old days, so now in his perplexity he turned his face to his old love, searching for he knew not what, but instinctively obeying the primal stirrings that prompted the great race migration of our period.

But in the West he did not find what he sought, nameless though it was. He retraced his steps and then sought the newer North. It was then that he must have cried "Eureka!" For here was the Western North, a new West with all the pep of the old, a special brand of its own and an air of settledness and sobriety that no western land has ever had in its infancy at least.

When Men Were Men

The Ontario Government was in the first flush of its colonizing scheme for the northern part of the province at this time but the country was still innocent of railroads and depended exclusively on the shank's mares of its sons for its transportation facilities. And it was thus that George Taylor rounded the northern end of Lake Temiskaming on the three days' hike that brought him into New Liskeard, the then heart and nerve centre of the new country. New Liskeard is well called the mother of towns, for from her lusty lions have sprung sons and daughters that now outstrip her in wealth and population.



View showing how samples of hardware are displayed in the Cobalt branch of the George Taylor Hardware Co., Cobalt, Ont.

A Prophetic Vision

He was impressed with what he saw, with the superabundant natural resources of the Temiskaming country, and cer-

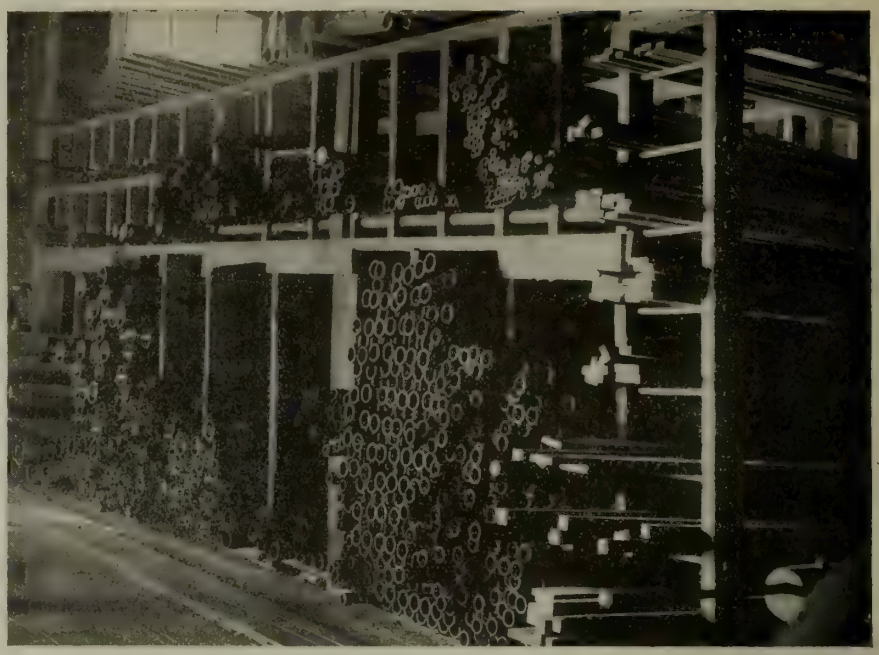
tain in his own mind that it contained the possibilities of a great centre into the lap of which the wealth of many should be poured. Some of his London friends disagreed with him and spoke wonderingly of this strange obsession of his for a mere wilderness. But he had seen his vision.

Later, many of them were to thrust aside the binding chains of a life time in order that they too might do this thing.

Giving Credit Where It Is Due

Although to-day the father has ceased to take any active part in the business, it is to him that the loyal sons ascribe any success they may have had. They are as unstinted in their filial appreciation of his forethought in picking out such a place and such a country for them to grow up and develop in and for his later care of the business he was to create and turn over to them as they are modest on their own behalf. As one says: "It's easy sailing to follow such a man but hard work to keep up to the mark he has set."

But to the impartial and unprejudiced observer they appear less as distinctive individuals than as a distinctive family which specializes in the use of waste display space in their mental stores; of an open mindedness and a clarity of ideas that result in virility of execution. Their minds are like their stores because the one created the other. And their stores are models of efficiency of the broadest and most human kind in which the mere fact that empty air and bare boards may be and are used to the limit of gainful possibility for the display of goods and prices, does not include with it a precise and machine-like efficiency that stultifies human efforts in clerks and customers. The Taylors draw a distinct line of demarcation between people and things. And they make it pay.



View in the Taylor warehouse at Cobalt, showing a portion of the pipe stock.

The Test of a Man

Fortunately for this family and for the work they had to do they are all men of splendid physique. This was fortunate in a country where even a white man to be accounted really worth while must be able to walk off with his two hundred pounds of a load, and an Indian with perhaps three hundred pounds. For there are good packers and poor ones and to walk across a slippery log, wave whipped, when one is laden down with a pagoda-like structure of flour and food strains every nerve and muscle as well as the tump-ine.

The rivers still teem with fish, the forests with game, but all that has disappeared. Roads and rails replace the long paddles and the man-killing port-

Interior view of the New Liskeard retail store of the George Taylor Hardware Co., Ltd.

View of the interior of the Cochrane Ont., branch of the George Taylor Hardware Co.

ages of the old days. But the country still belongs to the young man as it did in those days of three-hundred-mile trips, of dollar a pound bacon that had to be scraped of its rust before it could be cooked, and that could be smelt twenty chain lengths away from camp.

George Taylor had been a prominent figure in the life of London as a partner in the Taylor Bros. store. So when he bought out the hardware store of E. Monahan in New Liskeard in 1902 just when the ground swell of the great Cobalt and general north country boom was beginning to assume a distinctive entity it was only natural that he should continue the civic activities which had once made him mayor of London. He became a prominent figure in the business and political life of the new country. He is the president and one of the organizers of the famous Temiskaming and Hudson Bay Mining Co., and of the Dome Lake Mines.

His youngest son, Ralph Taylor, manager of the Cobalt store, was an alderman of the town for two years, and is secretary of the Red Cross Society, which after Toronto and Hamilton ranks next in Ontario in the size of its contribution.

Albert Taylor has been mayor of Cochrane, and Will Taylor is water commissioner of New Liskeard. All have actively participated in the municipal and political affairs of their respective towns. Will Taylor came direct from London to take charge of the New Liskeard store at the time of its purchase. His brother Albert followed him six months later in 1904, at which time all goods came into the country by boat, and all men by foot around the northern end of the Lake Temiskaming.

At the time of the Cobalt discoveries in 1905 a branch was opened there, and Ralph Taylor, then a boy of seventeen, was placed in charge. The company was orignally incorporated, with George Taylor as president, and James Taylor as secretary-treasurer. In 1908 the Larder Lake branch was opened to accommodate the needs of the great rush to that camp. This store was housed in a tent at first, and later in a log cabin. Unfortunately Larder Lake went the way of the less fortunate mining camps and the store did likewise; ceased to be. In 1911 the Cochrane branch was opened with Albert Taylor as manager, following the fire that had largely destroyed that place shortly before.

In 1915 the capitalization was increased to $250,000 and the name changed to the present one with Wm. A. Taylor as president.

Developing Along Lines of Least Resistance

A jobbing trade was done from the beginning, especially on the Quebec side of Lake Temiskaming, and especially in the case of the Cochrane and Cobalt districts. Each store had necessarily to develop along the lines of least resistance, which in the case of the head office at New Liskeard, was in the way of a general hardware business with especial reference to the needs of farmers and settlers as filled by general hardware, building supplies, lumbering tools, sporting goods, etc., with a small volume of prospector and mining trade.

In Cobalt the reverse is true, as the chief business there is a mining one, and is covered with a completeness very unusual to hardware stores in older mining camps than Cobalt.

The chief jobbing business is done here where two travelers call on the mines and small stores as against one in New Liskeard, and in contrast to Cochrane, where the jobbing business is done solely by mailing lists and catalogues.

Auto Accessories in Cobalt

It is in Cobalt that the Taylors have developed their auto accessories line to its greatest extent, so that now they operate a large gargage and sell cars as well as accessories.

New Liskeard carries a full line of accessories, but Cochrane is as yet a stranger to automobiles. The company first introduced their catalogue to the trade in Cobalt five years ago to reach the heavy buying mine trade.

This catalogue was based as merely introductory, and the goods were sold on list prices, so that a new catalogue was not necessary until quite recently. In Cochrane, however, a very complete catalogue covering the whole stock and giving complete information as to prices, etc., has been issued as an experiment which has already justified itself. Needless to say this catalogue is not mailed into the territory tapped by the other branches. The work of all three is so thoroughly co-ordinated and co-operative that such unnecessary duplication of effort becomes impossible. Each branch has its own problems, solves them

The above store at Cobalt was evacuated in 1909.

and passes the experience on to the rest for company digestion.

The Cochrane stock is largely a replica of the general hardware line carried in New Liskeard, with the exception of the fact that more attention is paid to the special needs of a very new country, of which Cochrane is the natural centre. For this town, its admirers will inform you, is the only town between North Bay and the North Pole. Literally it is two hundred and fifty miles due north of North Bay, and one hundred and fifty south of James Bay.

Secrets of Success

The country still calls for men and work as it did in the days when the Taylors, father and sons, did all their own work, from bookkeeping to warehousing. They say that the business pulled itself up by its boot straps, but it appears that they must have been tugging about that time too.

The country has experienced a very wonderful growth during their time in it. But they devoted themselves to their work in a way that would insure success in any country.

Worked All Night

In New Liskeard the store was open every night, and often on Sundays. Large quantities of goods were shipped over the White River. In order to do this it was necessary to work all night, for the boats arrived in town at eight o'clock in the evening, and left at seven in the morning. This meant that all orders must be put up over night to insure prompt shipment and satisfactory service. Very often a wheelbarrow was the only means of locomotion, but it was never beneath the dignity of a Taylor to wrestle with a wheelbarrow, to roll a barrel or carry a box. They had excellent reasons for their lack of pride. They had no clerks to do these things. Always they put their profits back in the business in the way of a wider range of lines. Always they gave full play to their ideas that the work of their hands might not go for naught. They dreamed dreams and lived to see them fulfilled.

View showing a portion of the interior of the C obalt store of the George Taylor Hardware Co.

Do You Figure Your Profits Correctly?

Many Merchants Fail Because They Err in Figuring Profits—Figuring on Selling Price the Best Method.

DESPITE the great amount of educational work which has been accomplished during the past few years, credit-managers state that one of the chief difficulties which they encounter in the retail business to-day is the incorrect methods followed by some retailers in figuring profits.

If a merchant wishes to make a success of his business it is essential that he should follow a proper method in arriving at his selling price, in order that after allowing for all expenses, he shall have a fair margin of profit.

The gross profit or margin embraces the difference between the cost and selling price of an article. It has been defined as "the difference between the cost of an article and the selling price; constituting the sum from which incidental expenses, risks and profits are to be met.

It is scientifically correct to use either the cost or selling price as a base in figuring the percentage of profit, so long as it is stated and made clear on what base the percentage has been calculated.

The majority of successful business houses, both retail and wholesale, follow the rule of figuring the percentage of profit on the selling price. This method is advocated by practically all authorities as correct and in accord with sound business principles.

Although there may be a slight variance of opinion regarding this important subject, practically all agree in one particular, and that is that the retail issue is the showing of net profits in dollars and cents at the end of the business year. In order to make a satisfactory showing it is necessary that a proper method of figuring profits should be followed throughout the year. An incorrect understanding of the proper method of figuring the percentage of profit is a rock on which many business ships have been wrecked. And where many men make their mistake is in their refusing to see or acknowledge that any per cent. of a smaller sum is a smaller per cent. of a larger sum—that if a fixed sum is a certain per cent. of a certain sum, it is a smaller per cent. of a larger sum; or in other words, if 25 is 25 per cent. of 100, it is only 20 per cent. of 125.

An example might be quoted in the case of a retail merchant who bought certain articles at $1 each. His cost of doing business, so he said, was 25 per cent. (based on gross sales), and he wanted to make a profit of 10 per cent., so he marked the articles to sell at $1.35. His price should have been $1.54 to make a 10 per cent. profit.

This merchant's cost of doing business was 25 per cent. of his selling price, but in pricing his goods he made the frequent and fatal mistake of only allowing 25 per cent. of the invoice price for his cost of doing business. He used the invoice cost as a base in figuring his selling price and although his cost of doing business (25 per cent.) was based on his gross sales, he only added 25 per cent. of his invoice price instead of 25 per cent. of his selling price. If using his invoice cost as a base, he should have added 54 per cent. to the cost price instead of 35 per cent.

50 *PER CENT. ON COST IS ONLY* 33 1-3 *PER CENT. ON SALES*

The majority of successful business firms, quite properly, figure their profits on the selling price, because expenses, taxes, sales totals, shrinkages, incidentals, etc., are figured on the gross sales or turnover. The selling price includes expenses, cost of goods and profit. The chief point to bear in mind is that 50 *per cent. on cost is only* 33 1-3 *per cent. on sales;* 25 *per cent. on cost is only* 20 *per cent. on sales;* 100 *per cent. on cost is only* 50 *per cent. on sales. The merchant who thinks he is making* 50 *per cent. and is only making* 33 1-3 *per cent. stands a splendid chance of being ruined by the miscalculation.*

But you say why should the profits be figured on the selling price instead of the cost price? There are many good reasons. The percentage of expense of conducting business is based on the selling price. If you talk per cent. of profit on cost and per cent. of profit on the selling price you are liable to get badly mixed. Mercantile and other taxes are nearly always based on a percentage of gross sales; sales totals are always given in books of record—very seldom are cost totals shown; allowances in percentages to customers are always from the selling price; no profit is made until a sale is effected; if profit is figured on the selling price it indicates correctly the amount of gross or net profit when amount of sales is stated; the percentage of profits on sales is indicative of the character of result of year's business.

Some people have an impression that the method of figuring the percentage of profit on the selling price is for the purpose of fooling ones self into believing that one is making less money than is really the case, but this is not so. Every retailer should figure the percentage of profit on the selling price in order to arrive at the exact truth and to avoid misleading themselves into believing they are making money when they are really losing.

A Good Illustration

An authority on "profit-figuring" recently quoted an incident which is a good illustration of the greater safety of figuring on sales. The case was that of a general manager of a business who sold an article which cost 80c for $1, and, basing his percentage of profit on the cost, figured that he was making 25 per cent. At the end of a given period the sales totaled $40.000. The presumption was that a profit of $10.000 had been realized, while the books only showed a profit of $8,000, or 20 per cent. of sales.

Regarding the rules for figuring the costs of doing business, it must be remembered that a merchant may fool himself by failing to charge all of his expenses into his cost of doing business, but his expenses will come out of his gross profits just the same.

The average values for live stock in Canada last year were as follows: Horses $123, as against $126 in 1914; milch cows $61, as against $57; other cattle $44, as against $42; sheep $8, as against $7; swine $15. as against $12. Approximately the total value of farm animals in Canada at the end of December is estimated at $750,667.000, compared with $725,530,000 in 1914.

German hardware manufacturers had in many cases their semi-manufactured and finished products commandeered by the government at prices considerably below the costs of production.

General interior view in retail department, Cochrane Hardware Company, Sudbury store. An abundance of light is supplied by the large show windows.

The accompanying article deals almost entirely with the retail store of the Cochrane Hardware Co., at Sudbury, Ont. Descriptions of the Company's splendid retail stores at North Bay and Sault Ste. Marie, Ont., have previously appeared in HARDWARE AND METAL. *There are many interesting features in connection with the Cochrane stores. One worthy of special notice is the manner in which the various hardware lines are displayed. An effort has been made to display as far as possible samples of all goods carried in stock. In the above illustrations a partial view is shown of the display tables which are used for displaying household goods and from which many sales are made. Special display stands have also been used for displaying some lines of kitchen utensils, carpet sweepers, etc. The paint stock as seen in the background of the photograph can be seen by all customers on entering the store. Specially constructed display racks are used for displaying some of the smaller articles used in the kitchen of the home.*

Making a Hardware Store

Manager of the Retail Hardware Department of Sudbury Public—New Ideas Constantly Sought For — Marked in Plain Figures—Display Tables in Stock—The Manager

Written for Hardware and Metal by O. D. Hixon, retail

IN offering this article to the many readers of Hardware and Metal, I might say that we of the Cochrane Hardware, Limited, are particularly proud of our business field, New Ontario, and of our places of business at Sudbury, North Bay, Sault Ste. Marie, and Copper Cliff.

The following deals entirely with our Sudbury branch, the mother store, from where our rapid expansion and growth has been fostered and guided by up-to-date management.

The photographs accompanying this article are of the Sudbury retail store. As many more would be necessary to give you an idea of our wholesale department, but as Hardware and Metal has asked for an article on our retail store only, for the present I will not touch the wholesale end of the business, and what I have to tell you here covers only our retail store, which fact I am anxious that you should keep before you, because many hardware men throughout Canada will wonder if it is possible that the floor space specified is really used to advantage for retail business up in New Ontario. It certainly is, and now just at the end of our first year, in these quarters, we find ourselves wondering from time to time where we will find room to stock and display certain lines. We use all the space we have, and to the best advantage.

A Complete Stock

Our stock is complete in all lines of shelf and heavy hardware, paints, oils, glass, builders' supplies, mining, mill, and lumbermen's supplies, electrical goods, and accessories of all kinds, tin, granite and aluminum ware, and household hardware of every description.

Cutlery, sporting goods, guns, rifles, and ammunition are given every attention that such departments require, and we pride ourselves on having in stock, always, all goods that our hosts of customers require. Prompt service by an experienced staff of salesmen, quick deliveries, and quality goods, at the lowest possible prices, are our mottos, and it is indeed rarely that we ever hear a complaint on any of these points.

The People's Store"

Firm Tells How Efforts Are Being Made to Please the Secures Ideas From Trade Papers — All Goods Sell Goods—Sample Automobiles Carried Endeavors to Meet Customers

manager, Cochrane Hardware Co., Ltd., Sudbury, Ont.

Goods Marked in Plain Figures

We are very particular regarding the marking of our goods, and everything bears a mark in plain figures. Where this is absolutely impossible, printed price lists, handy to customers and salesmen alike, are always supplied.

The electrical, plumbing, heating and tinshop departments are under the management of D. S. Humphrey, who has been with this firm for many years.

The "People's Store"

The retail end of the business is under the management of the writer, who has endeavored in every way possible to make this the "People's Store," one to which men, women and children are glad to come, and where they will find attractive displays of lines that interest them, and prices that will always prove attractive.

New ideas for displaying goods are eagerly sought for, and used if at all practical, and bright attractive display windows, with price tickets on all goods, are planned and executed as often as it is possible to plan and change eleven large windows. Here is a point that should prove very interesting to other hardware dealers throughout Canada. With the one exception, The J .H. Ashdown Hardware Co., of Winnipeg, I do not know of any store in Canada that can boast of such valuable display space in the form of show windows.

Large Display Windows

Referring to the photograph of the interior of our store, readers of this article will readily see what we have here in the way of a store and what a wonderful selling force our windows must be. A few measurements will probably prove interesting. This building is three storeys high and, with the exception of a few offices and a tinshop at the front of the second floor and a small lodge-room on the third floor, all the remaining space, including a basement under the entire building, are given up to hardware. The frontage on Durham Street is 120 feet, on Cedar Street 105 feet. The main entrance, which, by the way, is large enough to accommodate any automobile made to-day, is on Durham

Owing to the width of the Cochrane hardware store—120 ft.—the photographer encountered some difficulty in securing interior views which would show up the various departments. Although a large portion of the interior is shown in the accompanying views, there are several departments which could not be taken in the photograph. For instance, in the store two automobiles are shown on the main floor. The above view shows a portion of the sporting goods department. One silent salesman is devoted to a display of various lines of sporting goods. The silent salesmen are all mounted on stove casters and can be easily moved on short notice to any part of the store. A view on the following page will give the reader some idea of the extensive window display space which has been provided. A gasoline auto filling station is located in front of the store. The special electrical room at the north end of the store is not shown in the photographs. In this department a large stock of electrical goods is displayed. Portable backgrounds are a special feature of the large display windows.

Street, and is almost opposite the new post office and Custom's building, erected here recently.

The main store is 120 ft. by 50 ft., and all departments are in plain view, directly one enters by the above entrance, and are easily gotten to by numerous aisles and passageways, which are lined on either side by attractive displays of seasonable goods from every department.

Display Tables for Household Goods

To the right of the main entrance, and running the entire length of the store, are numerous special display tables, given up entirely to household hardware, such as wire goods, can-openers, and articles of a 5c, 10c and 15c nature.

These tables are silent salesmen in every sense of the word, and every day one can note a great number of sales from them, which take up no salesman's time, and which were truly the result of the display itself.

Stoves to the Front

To the left of the main entrance, and in a direct line with the tables mentioned above, is a line of ranges and cook stoves. These are goods that we all like to sell, and our policy of keeping them to the front the year round results in many unexpected range sales.

Six Silent Salesmen

Directly opposite the above, on either side of the entrance, and directly in front of the entrance, is a line of show cases, six in number. With the exception of the two cases facing the entrance an eight-foot isle divides the others. This gives, across the entire width of the store to the counters at the back, four distinct spaces flanked by these roomy aisles on either side. Directly back of the centre cases, fixtures to the height of four feet accommodate practically our entire stock of silverware and table cutlery, and back of these fixtures, occupying a space of 12 ft. by 12 ft., are the retail offices. This is enclosed by a solid hardwood railing, four ft. high, with entrances from either side isle.

Can See Customers

Readers will observe from the photographs that there are no fixtures anywhere to block the view from end to end or side to side of the store, and, with the office in the centre, directly facing the entrance, the manager is enabled to see at once anyone entering the store, to see that they receive prompt attention, and to greet each and every one that enters.

Here is another good point for hardware dealers to note: How many people come into your store during the day that you do not see? How many of these same people would you have liked to see? How many of your customers would like to see you personally, merely to pass the time of day perhaps, or to let you know that they are bringing their patronage to you?

Exterior view of the Sudbury branch, Cochrane Hardware Company, Ltd. Note extensive window display space.

The arrangement of our retail office is perfect, and the space given up to it is worth any rental you might put on it. I have been in Sudbury only a year, but I am sure that I know personally 95 per cent. of the people that visit our store. I speak to them every time they come in, they speak to me on the street, and even better than all this, which is valuable, mind you, when you are hustling for more business each and every day, I am able to see what my salesmen are doing towards serving each person, and I can at any moment direct special attention to any customer. We, like all other up-to-date merchants, are serving the public, and first, last, and always, they should be our main thought. An attractive store, attractive window displays, and other forms of drawing the people to your place of business, must be followed up by every attention to these people once they are inside.

Value of Show Windows

Coming back again to the show windows of our store, of which we are so proud, we want to impress on other dealers how valuable we consider them as a direct selling force. Our windows are all of uniform size, the glass being 8½ ft. by 8½ ft., and as the floor proper of the store forms the floor of our windows, we are enabled to make them of any depth desirable to suit the displays. However, we always aim to have them regular, and in a line at all times. We use portable backgrounds about 5 ft. high, and these are easily put up or taken down as we desire.

By the foregoing description you will note that our windows are not entirely enclosed in themselves, and passers-by are permitted a view of the interior of the store from any part of our great frontage. With these large numerous windows we are supplied with an abundance of light at all times during the day, and at night the lighting is accomplished by thirty 300 watt nitrogen lamps.

Location of Departments

The rear of our store, which, of course, runs the full length of the Durham Street frontage, 120 ft., is given up to the following departments: Sporting goods, tools, shelf hardware, cutlery and builders' supplies. Our shelving is roomy and regular, and metal boxes with hardwood facings are built to accom-

THE WAGES OF SILENCE

Two little birds were bachelors. Each was the other's chum. Said one of them: "This single life is growing stale and bum. I wish to candidly and most emphatically state that I shall advertise the fact that I desire a mate." The other said: "I would not have you think my feet are cold, but I should never advertise, for that is coarse and bold."

The wise one opened wide and deep his highly gifted throat, and sang with ardor and technique his amatory note. The maiden birds from far and near flocked in to hear him sing, and signified their willingness to wear his wedding ring; and very soon the anthem which he warbled from his breast had won a highly skilful wife to supervise his nest.

The one who wouldn't advertise still sits upon a limb, but lonely lady birds will never pause to look at him. He has some lovely qualities peculiarly his own, but just because he doesn't fill his lungs and make them known, his atmosphere is darkened by a cold and dismal blight, and neighbors have the notion that he isn't very bright.

—Printers' Ink.

modate our stock. Five special wall display cases at regular intervals accommode attractive displays from these departments.

The south end of the store is given up entirely to aluminum, enameled, nickel-plated, and tin ware, of which we keep a complete stock.

Attention to Brushes

The north end of the store is used for paints, varnishes, stains, and other lines adaptable to the paint trade. Brushes are given special attention at this department, and our full range is kept in display bins, properly priced, which has proved very successful, as we find these goods are picked up throughout the year and not only during the regular paint season.

Special Electrical Room

A special and separate electrical room, at the north end of the store, accommodates a large stock of electrical fixtures and sundries. Special attention is given here to make this end of the business an attractive spot for customers visiting any other department. All our fixtures are wired and connected, and at night especially this electrical room is a drawing card for much profitable business.

Automobile and accessories are comparatively new departments with us, and regarding the latter, we are using great care in the selection of our stock, endeavoring to keep only those accessories that are really saleable. We are agents for the Chevrolet and Studebaker cars. The Chevrolet is a popular-priced car, and our sales this year will surpass our expectations by possibly twenty cars. A "Chevrolet" and "Studebaker" of the latest model are kept on the floor of our retail store, and here close inspection is possible, while demonstrating cars of both makes are in use daily.

Our show cases are given up to displays of pocket cutlery, scissors, cut glass, silverware, brassware, and other such lines, and are always kept neatly arranged and as attractive as possible to make them.

The basement is divided into separate stock rooms, accommodating fittings of all kinds reserve paint stock, oil stock, heavy goods. These stock rooms are kept as neat and as well arranged as our retail store, and if we are obliged to take a customer to this part of the store we can do so, knowing that the impression created in our main store is not spoiled by a disorderly basement.

The second and third floors are used as stock rooms for all classes of goods, and here again the same attention is given to the arrangement and care of stock.

Directly in the rear of our main store on the ground floor is a roomy receiving and delivery department, looked after by a practical man and goods incoming or outgoing are carefully checked, and unpacked or packed as the case may be.

A simple effective system is in force throughout the entire building, and detail work is simplified accordingly.

Our staff consists of six experienced salesmen, receiving clerk, delivery clerk, and a porter, in addition to a delivery staff adequate at all times to handle promptly deliveries of every nature.

Cleanliness, order, and system are given every thought and attention, and we feel as one in regard to these essentials, just as we do in regard to everything pertaining to the service and attention of every customer coming into our establishment.

Read Trade Papers

As a whole, have we not every reason to feel proud of our place of business, and still, in conclusion, let me add that we have not yet reached the stage when we feel absolutely satisfied with everything. We read carefully every article we can secure dealing with other stores' methods of arrangement and display, and we very often pick up valuable pointers in this way.

May our efforts prove of interest and assistance to some of the many hardware dealers throughout this great Dominion, is our especial desire in offering this article to the readers of Hardware and Metal.

A Hardwareman's Auto Bus Line

The Birth of an Idea for Home Use in a Foreign Land—The Complete Equipment of a New Business as an Adjunct to the Old—Service the Predominant Feature That Has Insured its Success—Adaptation of the Service to the Householder's Needs

An authorized interview by Hardware and Metal representative with W. E. Ranger, Lachine, Que.

IT was during my trip to the Panama Exposition that the idea of an auto-bus line first occurred to me. I could not fail to notice the great success of bus lines not only in cities like Salt Lake and San Francisco, but also in the smaller towns that corresponded in size to Lachine. So when I returned home I got busy.

Our service was installed on April 1, 1915, and continued daily until October. This year we will operate until November. We operate a Stewart and a Studebaker car, each capable of holding twelve passengers besides the chauffeur and conductor. The initial expense of cars and equipment was large. A depot was constructed next door to the hardware store, uniforms were bought for the four employees, and everything needful to insure success was done before the service was instituted, in order that the time table might be lived up to. Right here I want to emphasize the importance of that one point of being on time.

Incidentally on the reverse side of our time table we carry really catchy ads in both languages calling attention to the seasonable and sporting goods lines most in demand with the summer people, and we lay stress on our auto and motor boat accessories.

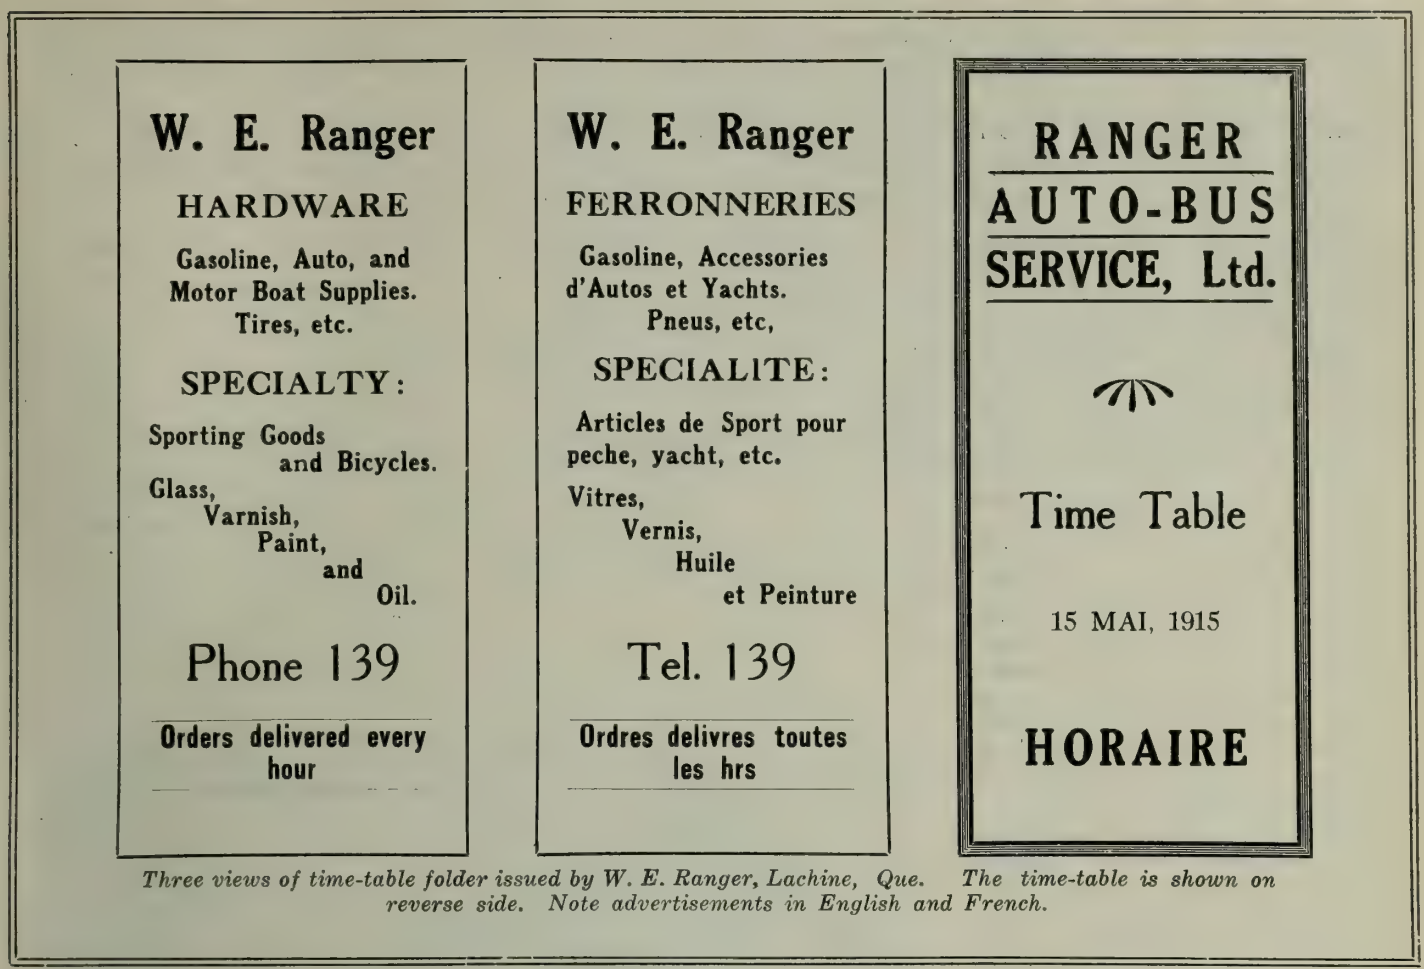
By maintaining consistently a hard-and-fast schedule we did more to get and hold the travelling and shopping public than any other act would have done. A systematic service is most essential. To do all this it may be necessary to face a loss at first. It is merely the deficit, not a loss caused by the initial expense of any worth while long-continued advertising scheme. The installation of well-oiled machinery of business is advertising in the broadest sense. It is a case of acquainting potential customers with one's value to them.

In the auto accessory lines we make a point of carrying all of the parts likely to be needed either by ourselves or our customers, whether it is a new tire or a spark plug that is needed we are usually able to meet the demand promptly. That is found to be the gist of the success of serving auto owners, promptness in filling their wants. There are eighty cars in this vicinity. The number is growing of course but the original number when we started our auto accessory line was much less. The auto accessory line depends of course upon the increase in the number of those using cars. Fortunately a steady growth continues in that respect always, everywhere.

As gasoline is one of the chief channels of approach in the auto accessory trade, we feature that in a variety of signs in and on the store, outside where they may be seen, and in all parts of the town. The gasoline pump house is properly labeled with the name of that article; an ordinary plain sign of a large size in front of the store, and an extremely large one that extends the full length of the store, whence it may be seen from all over the street.

Manufacturers now offer so many inducements that it is possible to add a considerable quantity of fancy display cases at a minimum of cost, and the guarantee of the manufacturer to protect the dealer is such that he is enabled to give the trade assurances as to the wearing qualities of the goods which would have been impossible a few years back. In the case of the more costly goods, it is not necessary to carry a large stock on hand. A great deal of the selling may be done by catalogue, and in any case one sample is sufficient of such articles as expensive sets of tires or costly shock absorbers, or anything of that class of goods. A large stock is to

Views of W. E. Rangers auto-bus and hardware store. Complete details are given in the accompanying article.



Three views of time-table folder issued by W. E. Ranger, Lachine, Que. The time-table is shown on reverse side. Note advertisements in English and French.

be avoided, and it may be guarded against by buying close at home, but only as needed, and in this way keep the stock down to irreducible minimum. Of course, better prices may sometimes be obtained at a greater distance; but in that case one must have the goods on hand, while by depending upon some nearby jobber it is possible to supply the trade very promptly without going to the expense of carrying a stock that will run into any large amount of money.

A line consisting of spark plugs, oils, auto lamps, switches, ignition systems and spark coils, will include a part at least of the lines that go quickly and are in constant demand, and upon which the dealer may depend for quick turnovers.

Our deliveries are all made by these autos. By a special arrangement a boy takes one of the cars out between bus service trips at whatever hour of the day business happens to be light. Thus without any interference with our schedule we are enabled to make deliveries promptly and at the minimum of expense.

Selling Auto Accessories

We have handled auto accessories for some time. We have been so successful that we contemplate adding to this branch of our business this spring. The idea of the bus service received its initial impulse from the fact that we were already interested in auto lines. Our chief object in making the step was to make it possible for customers from the nearby towns to reach Lachine in the first instance, and to be dropped at this store in the second instance. The idea, once in actual practice, has grown of its own volition until its ramifications affect every department of our business.

Lake Ste. Louise, with its well-to-do summer people, lies a few miles away. Along the river lay the scattered homes of another prosperous summer colony. It was these people we wished to reach. To sell them and their children and their guests motor boats and fishing tackle. To push the sale of paint to the owners of hastily-constructed houses, furnish them with builders' and household hardware, and, in fact, to be the prop and mainstay of a village that lay close to us and had no hardware store. Now, these people not only shop with us, they entrust orders to our conductor as they do to the grocery man. The come down for the ride on a hot day and stay to shop. They sometimes come to Lachine instead of going to Montreal. For those who wish to go to the latter place we meet the cars promptly. Travelling men and tourists depend on us. The line is a small business in itself, but chiefly it has a hundred tentacles out for the hardware store.

There is a race track in Dorval, another source of revenue for us. We carry the crowds to and from the races. For this trip of six miles return we charge twenty-five cents.

All summer long we run excursions for schools and societies at special rates to the beauty spots in the vicinity.

In my travels and from the conversation of others I know that there are countless places in Canada where this experience may be duplicated. The exercise of some initiative in inaugurating the service, coupled with a close study of local conditions, should insure success. Of course, the beginner in any branch of the automobile trade must forever bear in mind that it is a changeable trade. It is as variable as women's clothes. The smart whistle of to-day may be the junk of to-morrow. The keen competition of manufacturers, coupled with the changing whims of wealthy buyers, have created this condition. But therein lies the dealer's chance. The buyer is always looking for new improvements in the auto line, so that by carrying a light stock of many lines that may be quickly replenished from the jobbing centre, the dealer may always be prepared to push new and better lines. Be watchful, but be aggressive.

Auto Accessories in a Mining Camp

Phenomenal Growth of a Mining Camp Hardware Store—The Rapid Growth of the Auto Accessory Line and Some Opinions on It—Advises Against Handling Lines That Will Stand the Test of Time

An authorized interview by a Hardware and Metal representative with Ralph Taylor, manager of the Cobalt branch of the George Taylor Hardware, Limited.

SINCE this branch was opened in 1905 the business has developed a turnover six to eight times as great as that of the first year's business. The whole trade in its very elements has changed proportionately. In the old days when a man came in we did not ask him what he wanted; we knew. We simply gave him a tin plate, a cup, a knife, fork and spoon, a pick and shovel, and away he went. My first day's sales were made in this way to a prospector and they totalled just six dollars and forty cents.

We stocked from New Liskeard mostly at first, but the business increased so rapidly that we had to enlarge and the business has now developed into a highly specialized wholesale and retail one in mine supplies and hardware, automobiles and accessories.

Everything Dependent on Mining

Mining, the basis of all prosperity here, is holding up well and the conditions governing it are such that a greater quantity of hardware is required to-day than ever before for work of an experimental nature about the mills and shaft houses. This again leads to the increased mining of low grade ores and the creation of new markets for all lines. Further, the advance in silver from the forty-five cents an ounce of a few months ago to that of fifty-eight cents to-day, has revolutionized the whole industry.

Sub-Divisions of the Stock

Mine hardware, besides specializing, must include a large number of lines common to the hardware business as a whole. We divide this business into four departments under separate heads, which are as follows: The Drill Department, which covers the sales agency of mining drills and accessories, the Auto and Auto Accessory Department, the Assay Supply Department for mine assay office and laboratory supplies, and the General Hardware Department. This last could be sub-divided into as many more, such as Builders' Hardware, General Mine Hardware, etc. We also do a big business in such commonplace lines as paint, sporting goods, etc.

A Wide Range of Stock

The stock is kept so complete that we can supply all of the needs that are likely to occur in the upkeep of the large plants of machinery in the mills. We carry from $2,500 to $3,000 in belting alone and have a record of $6,000 in sales of drills to one mine in 30 days. Pipe fittings up to eight inches in size are carried so as to care for the constant repairs on old air and water lines and the constant installation of new ones.

Pulleys up to thirty-six inches in size are carried to care for the machinery needs of shaft houses and mills. A correspondingly wide range of mill machinery parts is carried as a reserve stock in the cellar with the reserves of paints, glass and other lines that go into all hardware stocks.

Special Oil House

The oils are kept in a separate house of reinforced concrete. A two-storied warehouse of 40 x 70 feet, convenient to the railroad track is used entirely for the storage of heavy goods, such as pipe, steel, nails, rails, building and roofing paper, etc. In the assay supply department we carry a complete line of muffles, crucibles, acids, fluxes, etc.

In the drill department there are air drills and various kinds of air drill, steam and water hose and fittings. A good business is done in ammunition as might be expected in this country. This is also true of all kinds of handles, which we stock in two grades.

All of these lines have grown up as the result of certain definite needs that thrust themselves upon our notice, crying for filling. In no case was this more true than in our inclusion of the auto accessory line in our stock.

Adding of New Line

The auto and accessory line was first brought to our notice in a very casual way, in the spring of 1913, when we decided to purchase a Ford car. To help out the cost of it, and because there appeared to be a market for cheap cars about here, we took the agency for this section. The business grew rapidly. We saw that we had neglected the most important part of the business and one most capable of development, namely, the accessory end. So in the spring of 1914 we laid in a full stock of accessories. The growth continued so that in the spring of 1915 we built our present concrete garage, and now in the spring of 1916 we are once more crowded for room in this branch of our business.

Our automobile season only lasts from April to November here on account of the deep snow, so that in the intervening months we must store the whole line away. But during the season we display the accessories in show cases, and windows almost exclusively, and carry a wide range of all the best selling articles. In tires our sizes range from 30 x 3½ up to 37 x 5. We make this factor of a wide selection a cardinal feature of the stock. In addition to the displays we feature auto signs in the store front a great deal and have installed a gasoline pump at the door.

There are one hundred and twenty-five cars of all makes in the territory that extends from here up to Porcupine and Cochrane. We were the first on the ground so we have the Ford agency for the whole and have a sub dealer in Porcupine. We try to get as many cars as possible for overhauling in the winter months and in this way keep our organization intact by keeping two repair men busy all winter.

Our contract calls for us to take eighteen cars during the winter months

Partial view of garage run in connection with Taylor's Cobalt store. The door where the cars enter is not shown in the photograph.

and in order to do this we are working prospects while the cars are piling up. It seems almost impossible to get a man to sign an order until there is some prospect of him being able to use the car.

We have hard going at times to sell as many cars as our contract calls for. But by contrast we carry three times as many parts as our contract calls for as a result of the wear and tear on small parts, etc. The factor of smash-ups enters into this to a great extent and helps our sales out very materially partly as a result of the bad roads that prevail beyond the twenty-five mile radius. The rough roads of the district cause, perhaps, more demand for parts than in other sections. Within that limit the roads are exceptionally good and conducive to an interest in cars.

Utility the Watchword

In this connection it is well to state that we find it advisable to carry all really useful lines of accessories, those that will stand use and talking about between car owners, who by the way compare notes as carefully as women shoppers. We avoid the frills in accessories. A man may plaster his car with so many things at first that a dealer should seek to advise him against useless expenditure. There are so many things that are actually needed that only a false viewpoint will induce the dealer to unload articles of a purely ornamental value on a new car owner. At first it may go well but eventually those innocent car owners will get their heads together.

If we were not selling cars we could sell more accessories for we could then point out how bare a car is and how much it requires before the full measure of enjoyment may be extracted from it. This is particularly true of Fords which offer a great opportunity to the live dealer. Every car must have a foot accelerator, a horn, a tool box, etc. The latter are always sold to Ford owners for however handy the seat may be for storage purposes it is usually found to be an awkward place to get at, especially if there are ladies out in the car.

An Exploded Theory About Gasoline Prices

The present high price of gasoline is often mentioned as a probable cause of a cessation of orders in the automobile industry. It is taken for granted that gasoline bills represent the chief cost of upkeep of a car, this is very far removed from the truth. Tires are the chief source of expense in automobile upkeep and gasoline ranks well down the list. Many varieties of parts and accessories come ahead of gasoline in the matter of expense, and yet gasoline is looked upon as essentially an automobile line while the others are scarcely ever mentioned except in some special connection.

Car Owner Is Good Pay

Undoubtedly the accessory trade is a good one. There is more money in it proportionately than in any other part of the garage business. Gasoline is sold on a close margin as every dealer knows and tires are handled on a price that is fixed by the manufacturer but on most of the other lines there is every opportunity for a very good margin of profit.

Auto accessory window display at Cobalt store of George Taylor Hardware Co.

It is a rule almost that the man who can afford to buy a car is the man who will pay his bills promptly, so that it has the added attraction of almost being a cash business. This is really a very important phase of this trade.

A Trade Puller

At any rate we find this a very nice business, when we sell a man a car we find we have clinched not only his motor but most of his other hardware business. This applies with equal force to the accessory trade—if he comes for gasoline, he comes for nails and this is a very important feature for the dealers' consideration. The man with the most lines has the greatest chance of doing the best business. Consider the department store, we can't all be Eatons but we can all emulate their variety and range of stock.

A Retail Auto Truck Service

For the last two years we have partially displaced horses on our delivery work by auto trucks. It was found necessary to retain some for the winter work and for all the year round handling of lengths of heavy pipe that would require very heavy and expensive trucks instead of the converted runabouts that we use at present.

Otherwise there is no comparison between the two methods and we have come to the conclusion that we could afford to bear twice the expense of horse delivery for the increased satisfaction and efficiency we derive from the use of auto truck delivery. However we are not put to bear any such abnormal cost for our records prove that our average cost per month per car does not exceed thirty dollars and for this cost each car covers from thirty to forty-five miles a day of good roads to say nothing of some of the well nigh impossible roads that lead to the mines.

Advertise In Some Way

There is no doubt that a firm must be kept prominently before the public if it is to endure and improve. For a long time we indulged in a newspaper column called "Taylors' News" for the single purpose of keeping our name before the public eye. And if thinking and talking about us are results, we had them. But whether by the spectacular, or the practical the thing must be done on the floor of the store, on paper and in the window, at all times and in all places, else in these days the business that neglects them will fade into a memory.

WESTERN CHANGE

R. H. Mainer, of The Mainer Electric Co. Resigns to Go Into Active Service

A change, which will be of interest to the trade throughout Western Canada, has taken place in the personnel of The Mainer Electric Co., Ltd. R. H. Mainer, who since the organization of the Company has had control of this business has resigned his position to go into active service with one of the regiments now being formed in Winnipeg. The position of manager has been given to J. Gordon Smith, who is a well-known figure in the hardware trade, being for a number of years on the traveling staff of The McClary Mfg. Co., Ltd.

Mr. Smith joined the staff of The Mainer Electric Company shortly after its incorporation and in 1915 was made Secretary of the Company, which position he still holds together with that of Manager.

The business will be carried on as before with the exception of the addition of an automobile accessory department. Considerable business has already been done in this line by the company, but the plans are for a considerable extension of the stock now carried by them.

Australia also had a magnificent crop of wheat for the season 1915-16. The yield was 164,438,215 bushels, as compared with 24,861,051 bushels in 1914, and 103,352,833 bushels in 1913.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, MARCH 18, 1916 No. 18

EDITORIAL BRIEFS

A GREAT many retailers are still selling goods at retail prices based on the costs of purchases made six or eight months ago. This is a time when stocks of merchandise should be re-marked, basing selling prices on present costs.

* * *

FIFTY-CENT gasoline by July, so the wiseacres say. Did some deluded soul say he recalls the time when it was fifteen-cent? On, on, ye braves! Why not make the slogan "Dollar Gas by Christmas—and Bust?"

* * *

THE word co-operation has a deep significance for the retailer. Co-operation is one of the most necessary forces in the retail hardware store to-day. Without the loyal co-operation of his staff, no merchant will achieve the best results.

* * *

WHAT bank manager will loan money without convincing himself in the first place that the applicant is thoroughly reliable? Why should a retail merchant give out goods, which represent so much money to him, without taking equal precautions?

* * *

TWO of the serious drains or "leaks" in the hardware trade are unproductive advertising and constant breakages of glass. The former is caused by lack of right method: the latter by a lack of knowledge of the proper way to cut glass. With the aid of some simple rules to guide the drains can be eliminated. Elsewhere in this issue these matters are treated under separate heads. Consult them, study them, apply them. They are worth your earnest attention.

OUR SPRING NUMBER

IN this issue we present to our readers our twenty-eighth annual spring number. We have endeavored to make this issue a practical and valuable one for the retail hardware merchants of Canada. In order to secure the information and illustrations necessary for the editorial section, the editors of HARDWARE AND METAL have traveled many hundreds of miles, and have interviewed dozens of retail hardware merchants, wholesalers, and manufacturers. We have endeavored to present only such matter as will be actually useful to retailers and their salesmen. By reading the editorial pages hardwaremen will secure many new ideas, not ideas of arm-chair theorists, but the ideas of men who are actually engaged in business and who are daily confronted with business problems in which all branches of the trade are more or less interested. In addition to the great wealth of practical information contained in the editorial department, the progressive merchant will find much to interest him in the advertising pages.

By studying the advertising pages he will find that many new products have been placed on the market. He will learn more about the goods which he already has in stock. This number is one that can be studied at leisure and kept on hand for future reference. It will be found valuable on many occasions during the next year.

NEW FEATURES

COMMENCING in this issue a new series has been started on "Criminal Law and Its Application to Commercial Transactions," prepared for HARDWARE AND METAL by Walter E. Lear, of Osgoode Hall, Toronto, barrister-at-law.

The articles will deal with the criminal law with particular regard to the retail business. This series should prove exceedingly valuable to our many subscribers throughout Canada. In addition to the series of articles, HARDWARE AND METAL has made an arrangement whereby subscribers to HARDWARE AND METAL can send in inquiries regarding legal matters, and they will be answered without cost to the subscriber. The only stipulation being that the subscriber must send in his name as an evidence of good faith. Names of inquirers will not be given when publishing answers.

Another feature which will be of interest to readers of HARDWARE AND METAL will be the publication of standard lists which will be started in the near future in this paper. One or more standard lists will appear each week. They will be arranged in

such a manner that they can be clipped out by the retailers and filed in cost books or elsewhere. A new series on "Practical Sheet Metal Work" recently commenced, and Article No. 8 of the series appears in this issue. This series promises to be even more interesting and practical than any of the excellent series which we have published in the past.

Other new features will be announced within the next few weeks. Despite the fact that we are constantly receiving letters from subscribers telling us how valuable our paper is to the retailer, the editors of HARDWARE AND METAL believe that leaving good enough alone, is standing still, and they are always working to secure new ideas and new features to give readers what HARDWARE AND METAL has always been working to secure new ideas and new features to give readers what HARDWARE AND METAL has always striven to give the best possible service.

THE FRONT COVER

WITH this issue another worthy addition has been added to the series of excellent front covers which have appeared on the annual spring and fall numbers of HARDWARE AND METAL.

The task of painting the front cover for this issue was allotted to C. W. Jeffreys, one of Canada's most prominent artists, who has painted covers for HARDWARE AND METAL for the past six years, and who during that time has prepared many covers which have been favorably commented upon by large numbers of HARDWARE AND METAL readers throughout the Dominion.

The cover on this issue is particularly appropriate for this season of the year when hardware merchants are receiving their spring shipments. The scene is a familiar one to the hardware trade in all it s branches.

MORE WAR ORDERS

ELSEWHERE in this issue an article appears telling of wonderful development of the munitions industry in Canada since the outbreak of the war. It is interesting to know that munitions contracts amounting to two hundred million dollars, placed at various periods as far back as eleven or twelve months ago, still await completion, and that as a result of conferences held between Sir Thomas White, Dominion Minister of Finance, Ottawa, the Imperial Munitions Board, and leading bankers, arrangements have been practically concluded whereby the latter will extend a credit of $75,000,000 to the British Government, and further munitions contracts for Canada amounting to in the neighborhood of $100,000,000, will become available as a result.

During the early part of the present year it was decided to establish a plant in Canada for the loading of time fuses, where all of the latter manufactured in Canada at different points could be sent for assembling and loading.

A suitable site for the plant has been procured, of about 50 acres, where it is expected plenty of labor will be available.

The loading of time fuses is quite an intricate and delicate operation requiring a large amount of skilled labor, and the plant indicated will give employment to about 2,000 people. The buildings are now under construction, and should be finished and ready for occupation by April 15.

ARE WEEKLY PAPER ADS. READ?

ON a few occasions lately merchants have asserted that they had given up advertising in their local weekly papers as no one ever read the ads. They know, because they had tried newspaper advertising without results. Daily ads. were all right, they admitted, judging by the continuous performances of some merchants, but the weekly was not in their class.

Complaints of this kind are not frequent in the hardware trade and in most cases, we believe, the merchant himself is to blame more than the paper or its readers. We have one town in mind where the whole advertising section of the paper looks dead, no more interesting than so much plate, fill-up matter. The ads. run week after week without a change, and whenever they are altered they are filled with generalities, such as: "See our new goods, etc." Not a price, not a line of description of the individual lines, nothing to show why they are worthy of the public's inspection and purchase; nothing better or more inspiring in fact than if we should read: "Jinks Bros., we keep hardware."

One of the important points with respect to advertising is to see that the advertisement is kept alive. By that is meant that it should be changed every week, if it happens to be a weekly newspaper in your neighborhood. Who would care to read over a piece of news for the second time in the columns of a daily newspaper? A newspaper which habitually republished items in which there was nothing new would not last long as a newspaper.

What holds true in the case of a newspaper serving up live news to the public also holds true for the merchant who buys space to tell about his goods. There should be a fund of material large enough in any hardware store to furnish fifty-two live ads. during the course of a year. And there is, too, if the merchant will but expend enough effort on the matter to think up something new and entertaining. Observe the large department stores. You will never find that they repeat the same advertisement twice. If they have the same story to tell they will contrive to put a different heading on it and change the wording a bit in order to make it appear like a new story. They realize that the main value of their advertisement lies in the fact that it is made new and interesting each time. Keep your ad. a "live" one.

REDISCOVERING OLD PARTS

ELSEWHERE in this issue is given a detailed description of the development of a business from the humble beginnings of pioneer days to the present large proportions. In succeeding issues we will treat important phases of this interesting growth which so closely corresponds with that of the new country it is associated with, that their mutual development may be said to have synchronized.

From serving the rude needs of a floating and transient pioneer population the business has developed into a large organization with three important retail stores, and all as a result of the driving power of the human energy of the personnel of the company.

The importance of the history of this development to HARDWARE AND METAL readers lies in the fact that the conditions that existed in Northern Ontario during its making, the immensity of its possibilities, the crudeness of its wants and the vastness of its future are exactly paralleled in many sections of this country to-day. And in the opinion of many competent authorities the cessation of the war will witness an active resumption of the arrested development of many of these sections of our country. The moral of this story, however, may well find a broader application than the mere comparison of its salient features with those of some other pioneer businesses. A broader and more comprehensive point of view will recognize the fact that the same breadth of vision and the same ability to grasp and turn to good advantage the opportunity of circumstance that characterized this business history is possible to other merchants and other conditions than those of new Ontario. There is within our Old Ontario many an unsung new one awaiting only the directly business vision of those who will strike out boldly into the current of events.

CIVIC IMPROVEMENT

HARDWAREMEN in many towns throughout Canada during the past year or two have given their efforts toward having a clean-up and paint-up week. In this they have shown themselves the advance heralds of a larger movement which is just now getting under way. In January of this year there was a notable gathering of men and women at Ottawa for the purpose of forming a Civic Improvement League for Canada.

Preliminary organization was completed and a provisional committee named of which Sir John Willison, of Toronto, is chairman. The objects of the league are set forth as: "To assist in promoting the highest interests of the cities, towns and villages of Canada and the welfare of its citizens by the study and advancement of the best principles and methods of civic improvement and development; to encourage and organize those social forces which make for efficient Canadian citizenship, and to secure a general and effective interest in all municipal affairs."

Hon. Dr. J. J.Guerin, ex-Mayor of Montreal, at the conference, said the whole tendency of the movement was to improve the homes of the citizens and consequently the municipalities.

In starting these paint-up and clean-up campaigns, hardwaremen have perhaps built better than they knew. Those villages and towns of Canada which are ragged and unkempt can be made beautiful very cheaply.

Why not see to it that a permanent branch of the Civic Improvement League of Canada is organized in your town right now?

NEW RATES OF ASSESSMENT

THE Workmen's Compensation Board will make a report to the present session of the Ontario Legislature in which, generally speaking, the new rates of assessment on employers on behalf of the Act will be less than last year. In a few instances where the rates were found to be insufficient they will be increased. On the whole there will be a downward reduction.

The first year of the operation of the Act has been quite generally satisfactory. Rates of assessment last year varied all the way from 30 cents on each $100 of wages paid to $10.00 on the same amount. The latter assessment applies to industries where dynamite and other high explosives are manufactured.

One of the points not yet settled is who shall bear the cost of the medical expenses in case of an injury to a workman. Up to the present the workman had to pay his own medical fees.

The medical associations are of the opinion they should be assessed against the employers also. Representations to have the Act amended in this respect will in all probability be made by the medical profession to the Legislature.

A NEW REGULATION

ONE of the recent regulations of the Ontario Workmen's Compensation Board will affect many hardware merchants. Provisions of the Act as applied last year exempted tinshops from the working of the Act where less than four men were employed. Under the new regulation if only one man is employed and he leaves the premises of his employer to do work, such as the installing of furnaces, that employee comes within the scope of the Act.

If, however, a tinshop is run in connection with a hardware store for the purpose of making small repairs, and in which the workman is perhaps a clerk in the store and goes into the tinshop to do these odd jobs, that tinshop is exempted altogether.

The rule, as stated by the Board, is: Where workmen leave the store or shop to do work for customers they come under the jurisdiction of the Act. This will undoubtedly affect quite a number of hardware merchants.

Unfilled Tonnage Greatest on Record

Report of Steel Corporation Indicates the Condition in the Steel Trades—Comparison of Prices Since Outbreak of the War—High Costs of Hardware

LATE last fall, particularly during October and November, Hardware and Metal published a number of articles directing attention to the unprecedented conditions then prevailing in the steel trades and suggested that the trade anticipate future needs as far in advance as possible

Occurrences, and conditions which have developed during the past four or five months have proven that the predictions of last fall were correct. Conditions in the steel trades instead of improving have grown worse and the mills to-day are farther behind than ever, with the result that prices of nearly all hardware lines in the manufacture of which iron and steel is used have been advancing rapidly.

Not only have prices advanced at an almost unbelievable rate, but it is almost impossible to secure supplies of certain lines of goods.

Hardware and Metal's weekly market reports have each week, for many months past directed attention to the many price changes taking place from week to week and of the scarcity of certain products.

The table shown on this page giving comparative prices at various dates since August, 1914, will give the reader some idea of the high prices which now prevail compared with the prices of a few months ago.

All small goods such as tacks, screws, hooks and eyes, tools and hundreds of other lines have advanced tremendously during the past few months. Flat head wood screws, for instance, at the outbreak of the war were quoted at a discount of 85-10-7½-10-5 per cent. from list. To-day the discount is 80-10 per cent., an advance of 20 per cent. having gone into effect this week.

For a period after the war broke out the steel situation was very much depressed. The domestic consumption fell to low levels with the railroads buying but little. The war consumption was apparently not considered as an important factor. In fact, such were the influences that prices declined and, as will be seen from the accompanying table, they were lower a year after the war broke out than when the great conflict started.

After the manufacture of munitions had been taken up in Canada—several months after the outbreak of the war—the new industry made itself felt in the consumption of steel. Not only did a heavy demand develop for steel to be used in making shells, but there was a revival of the domestic demand, principally in the United States.

In November last, the situation became so acute that the United States Steel Corporation withdrew all quotations to the Canadian trade. The unfilled tonnage of the Corporation to-day is the largest on record. The American Metal Market states that on March 10, the United States Steel Corporation reported unfilled orders, aggregating 8,568,966 tons carried on the books of the various subsidiary companies at the close of business Feb. 29. These are the heaviest orders unfilled ever reported by the corporation, even in the days when intercompany business was included in the public returns. The previous maximum tonnage was reported in December, 1906, when the orders aggregated 8,489,718 tons.

The total February output of ingots by the corporation is estimated 1,625,000 tons which is at the rate of 65,000 tons per day during the 25 active days of the month, including holidays which were not observed by the steel companies in February, but exclusive of Sundays. Thus the average daily tonnage was the heaviest ever reported, but the total output was smaller than in December or even in January, because of the fewer number of days in February.

It is thus indicated that the February output of rolled steel products aggregated approximately, 1,300,000 tons and shipments were slightly less, being but a little under the rate of 52,000 tons per day during the 25 active days under consideration. Shipments, while heavy, were exceeded in December, for the same reason that the total output was smaller in that month. The average daily rate of shipments, however, was larger than in December, in this respect again making a new high record.

A year ago, that is in February, 1915, the corporation was operating at the rate of only 63 per cent. of total capacity. To-day every furnace and every mill that it is possible to operate, is in service. The February, 1916, production of ingots was nearly twice what it was in February last year.

It is a startling fact that the orders for rolled steel booked last month were almost 2,000,000 tons, the indication being 1,946,199 tons as the bookings exceeded the shipments by 646,199 tons. In February last year the total rolled orders were 735,000 tons, and in February, 1914, a little over 1,000,000 tons.

Since the first of March, both the output and shipments of finished products have been at a higher rate than in February and with a larger number of days, the indication is that March will break all previous records in the history of the industry; at least as far as production and shipments are concerned.

Autos and Phonographs With Hardware

Orangeville Hardware Firm Sells Cars For Cash—Gasoline Sales Tripled by Changing Location of Automatic Filling Pump—Phonographs and Records Are Also Carried in Stock

An authorized interview by H. H. Black with W. Adamson, of Adamson Hardware Co., Orangeville, Ont.

MANY instances have been reported in Hardware and Metal of hardware firms selling automobiles and accessories in conjunction with hardware.

One of the latest brought to light is that of the Adamson Hardware Co., Orangville, Ont.

When a representative of Hardware and Metal visited the Adamson recently a new model of the Chevrolet car was given a prominent place in the store. At the time the car was at rest but it has had a very busy career, from the time it was delivered to this firm by the makers last October. It had also had a successful career, young though it was. The firm stated they had taken a number of orders for delivery this spring and they were looking forward to the breaking up of the winter when they expected to to place a large number, not only in the towns, but in the country districts around. So far the orders have been pretty well divided between townsmen and country people. The farmers around are in good circumstances, as stock raising is carried on largely and anyone who has been following the market knows what stock has netted the raiser in the last two or three years.

In a short time that car will again go into active commission and take interested prospects for a whirl around the town and country roads, but even as it stands immovable it has proved of great advantage in advertising, and its good points have been explained to a number who have been interested enough to enquire.

Sends Out Catalogues

The plan carried out by Mr. Adamson during the fall and one that he will continue during the coming spring and summer will be not only advertising in the newspaper, but what he considers more effective, he will send out as he has done catalogues, showing different views of the car and the prices for the two cars that he has, a roadster with the single seat, and the touring car with the double seat. The price for both is the same. The sending out of these catalogs with their attractive illustrations will start the spring fever and Mr. Adamson expects to cash in on this very handsomely.

Sells for Cash

"What will be the terms on which the cars are sold?" was asked this hardware agent.

"Strictly cash," he replied. "The makers demand cash of us and we will sell for cash only. This is the only satisfactory way. Otherwise if we took a certain amount of cash and carried over the balance we would have the old difficulty with a long drawn out credit. Every car that we have sold so far has been sold readily on a cash-on-delivery basis, and we expect very little trouble with those we sell this spring."

One of the clerks of the store is in charge of the taking out of the car to test it for those who are interested. For the first four cars that were sold, Mr. Adamson stated all that was required in the way of a demonstration was a spin of a few miles for the head of the house and his family. They were so delighted that they ordered it when they returned.

"Probably it will be necessary to give some instructions in the running of the car, but this only involves a few lessons. We do not guarantee if a man is stupid to teach him how to run the car."

Sales Increased Threefold

So far as motor accessories are concerned Adamsons have for sometime sold gasoline. An interesting point in connection with this is that the automatic filling tank was removed last season from the back to the front, just at the edge of the side walk, with the result that the sales increased threefold. The store is on the main street in Orangeville and all tourists passing up the old stone road to Owen Sound have to go along this street, so the location is admirable for the sale of gasoline.

An excellent window display by Goodwin's, Ltd., Montreal, feat uring goods which will sell readily during the next few months.

Going into Accessories

During the coming Spring the firm intend however to go more largely into the carrying of accessories and expect to display them in show case, probably at the front of the store, where they will be given good attention. They consider this also a very valuable line and think the carrying of these will advertise the car and that the car will in turn advertise them.

Selling Phonographs

One of the other lines that is given prominence in this store is an Edison phonographs and records that can be used on other makes of machines. At the time the store was visited by Hardware and Metal, two machines were exhibited on two tables just inside the front door on the left hand side and records with the names prominently shown.

In addition to the display inside the store a window was given up entirely to the advertising of these machines and the records. The window was made to form a sort of booth with a roof of compo board and on the back of it was strung in row a line of records and underneath them photographs, one at each end, of two famous singers who sang into Edison records. In addition was a table with another machine upon it, a lower priced machine. The firm is trying to get the public ready to pay higher prices now for these phonographs than they did some years ago and the larger number of machines that they are selling now average over $100. A number are sold at $132.50 and some up to $175 and $200. They have a large sale also of records for machines that are already in the homes.

It will be remembered some time ago an article appeared in Hardware and Metal of a feature of the Adamson store for displaying samples of stock. One wall was covered with green baize which was found suitable for showing various lines of hardware carried in boxes and cabinets. This is still a feature of the store, and the proprietor has found it the best method for displaying his goods he has ever adopted. It also gives a very attractive look to the store.

THE JOBBER

The jobber is little more than a mere distributor. In the economics of trade he is a necessity. Manufacturers have discovered that with his aid, they can cater to the retail trade, not only better, but cheaper. Jobbing is not therefore a profit-absorbing incubus, but a necessary institution, founded on economy considerations, and a benefit alike to the manufacturer and retailer.

H. Clucos.

ODD BITS OF NEWS

Pertaining to the Hardware and Metal Trades and Trade in General —Culled From Many Sources

Exports from Canadian mines for the month of January of this year were over a million dollars more than the corresponding months last year. The figures are $3,508,769 in January 1915, and $4,654,815 for the first months of this year. For the twelve months ending January 1915, the export of metals was $4,654,815 for the first month of this ending January 1916, $62,960,628.

South African wholesale hardware merchants and agents make frequent inquiries of the Canadian trade commissioner at Cape Town for building and cabinet locks as well as lever and padlocks.

The imports for consumption into Canada for January of this year were valued at $9,962,556. For the same months last year they were $5,125,009. During January, 1914, they were $7,029,888.

Exports from Canada were valued at $85,559,782 during January of this year. In January, 1915, the exports were $30,830,337, and in the same month in 1914, $29,861,359.

Total imports for the twelve months ending January, 1916, were valued at $502,772,844. This is less than we purchased during the twelve months ending January, 1915, when the total was $603,771,358. For the year ending January, 1914, our purchases were valued at $661,272,527.

Exports of Canadian products for the year ending January, 1916, were valued at $836,555,567. For the twelve months ending January, 1915, they were $448,903,263. and during year ending January, 1914, $481,722,490.

In 1915 Canada's purchases abroad were approximately 23 per cent. less than in 1913, while our sales abroad were 73 per cent. greater last year than in 1913.

Birmingham manufacturers of bedsteads need large quantities of angle iron and close joint tubing in the making of their products. Large quantities are imported from the United States.

The average value of farm land held for agricultural purposes, including the value of dwelling houses, farms, stables and other farm buildings are given by the census and statistics at $38.90 per acre. By provinces the average runs: New Brunswick, $22.48; British Columbia, $125; Prince Edward Island, $37.64; Nova Scotia, $28; Quebec, $51,36; Ontario, $52.49; Manitoba, $30.36; Saskatchewan, $24.20; Alberta, $23.15.

Average wages paid during the summer months last year for male help on the farms of Canada, was $37.10 per month, while for the year the average was $341. The figures for 1914 were $35.55 per month, and $323.30 for the year.

Female help on the farms of Canada during the summer months of last year were paid on the average at the rate of $20.20, and for the year $200. In 1914 the amounts were $18.81 and $189.55.

It is even a pretty expensive undertaking to die these days. The Coffin Furniture Manufacturers of Birmingham last month made a further advance of 10 per cent. on all coffin furniture. The war advance now amounts to 60 per cent. One could hardly afford to kick-in at these rates.

Australia has adopted the policy of excluding the Germans from the base metal industries in that country. Excluding gold and silver, the yearly value of these products is about $45,000,000. Facilities for treating lead, zinc, and copper ores have been largely extended. All copper goods required in Australia will shortly be manufactured there.

An interesting type of electric fan is installed in the Reading terminal market in Philadelphia for scaring flies. Forty-two such fans keep the flies away from the food products, not by the draught or suction they create, but by the moving shadows caused by the revolving blades of the fan.

The latest trading stamp variety in the United States is the shoppers' mileage proposition. For every dollar's worth of goods purchased the customer gets a ticket entitling him to ride one mile on a railroad. These tickets are apparently not redeemable in cash. The promoters could hardly get away with their scheme in Canada in face of the Trading Stamp Act.

Does Your Advertising Pay?

Many Merchants do not Advertise as a Business Proposition, But More from a Philanthropic Instinct to Support the Local Paper—Leaks Which Can be Turned Into Business-Getters

ONE of the important problems with which the hardware merchant has to deal is the matter of publicity. Thousands of dollars are spent each year throughout the small towns of Canada in advertising in the local papers which does not bring results to the merchant. In many cases he carries his "ad." in the local paper through the patriotic spirit of support to home industries. This is laudable in

IT IS ONLY THOUGHTLESS TO GO ON USING THE SAME OLD, WORN-OUT COOKING UTENSILS WHEN YOU CAN COME TO OUR STORE, AND FOR A SMALL SUM, GET BRAND NEW ONES. AND DON'T FORGET---MOST OF THESE OLD ONES ARE NOT "SANITARY."

WE HAVE MANY KITCHEN LABR-SAVING THINGS YOU WILL BE GLAD TO OWN. THEY ARE INEXPENSIVE. COME AND SEE THEM.

The original of this advertisement was ten inches deep across two columns. There is very little business drawing power in this advertisement. About the only point made is that "old kitchen utensils are not sanitary." If the labor-saving devices had been enumerated with a description, backed up by cuts, it would have no doubt brought the merchant business.

itself. Most country weekly newspapers have a difficult road to go in order to make their business pay. In many cases the editors and printers get little more than an "eking existence." The reason for this is often found in the fact that the merchant is unable to get the right kind of publicity. In his advertisements he falls short of putting across the footlights the kind that means business to him. So he carries his advertisement out of a spirit of brotherly helpfulness.

The local newspaper should at any rate be supported by the merchants. But the merchant should in turn see that he is going to turn his expenditure to good account in the procuring of business. It is the merchant who has solved the secret of the right kind of publicity who makes a success of his business. It is the right kind of publicity that makes the large department stores so successful. They would be no more successful than the average small dry goods merchants if they had not solved the problem of telling the people in a way that will interest them and make them buy the things which they have for sale.

Many a hardware merchant in the small towns says: "Well, everybody around these diggings knows I am here. If they want my goods they will come and get them. If they do not want them nothing will make them buy them." Yes, but how are the people to know what the merchant has? About the only way is for them to drop into the store and nose around. When the merchant has them there it will be necessary for him to do the talking in each individual case what he could do for all at the same time by the utilization of his advertising space in the right way. Does the average merchant realize that the ground he covers once in the talk which he prepares for prospective customers will answer for five hundred to one thousand prospective customers through his advertisement.

Electric Irons

Do it electrically and use a reliable Electric Iron rather than keep a hot fire burning. Our irons are economical in use of current and heat quickly and evenly over the bottom. Top and handle remain cool and comfortable. Complete with stand, plug and 8-foot cord. Price, $3.50.

Electric Toasters

This Electric Toaster makes toast quickly, evenly and uses very little current. It is well made, nicely nickel-plated and easy to use. Complete with plug and 8 feet of cord. Will fit any socket and take any current. Prices, $3.50 and $4.50.

Coffee Percolators

Clear, fragrant, delicious coffee can be made in two minutes with a **Universal Electric Percolator.** The moment you taste the coffee you are impressed with the richness and delicacy of its flavor, and the absence of the bitter taste. Coffee must percolate to produce that desired flavor. Price $10.00.

Illustrations help out greatly in quoting prices on hardware articles. Cuts for these can be obtained at a very small cost. Note the detail used in describing each of the articles. This advertisement was taken from an advertisement that is known to have brought results.

The original of this was four inches deep across two columns. From a typographical standpoint the advertisement is very attractive. It lacks "punch" in the reading matter, however. There are no convincing arguments used. In a hurried glance at the advertisement one would conclude that "Armco" Non-rusting Steel was the product being advertised. This advertisement is in marked contrast to the reproduction of the Homestead range.

But it is very essential that he talk to these prospective customers in a way that will interest them. It becomes therefore a most important detail of his business organization that he know what is the right kind of material to put in his advertisements and the best way to serve it to the public in order that it may get results.

Advertisements That Pay

Hardwaremen have demonstrated over and over again that it is a paying proposition to spend money in the right sort of advertising. Many hardwaremen realize the truth of this yet they feel at a loss when it comes to the proper way of handling this publicity. Like John Alden, they acknowledge that they are "makers of war and not the makers of phrases." There are

merchants, however, who are satisfied that their methods are all right, while in reality they are not making a paying investment. They slip along in their self-satisfied way and keep losing money. At the end of the year or after a number of years they realize they have been running behind. It is difficult for them to fathom why they have not been making money. One of the answers would be: "Look to your publicity. See that you are getting the kind that brings business."

Should Study Advertising

The merchant should make a study of this question. If he would lay more stress on this end of his business he would find that it would be an easier matter for him to work up a much larger business. This has been the experience of all successful business enterprises. They had first to solve the question of the right kind of publicity. Publicity is the life of trade. It is the ambrosial air on which trade must grow and wax fat.

Let it be taken for granted that the hardware merchant believes in the value of publicity. The question arises, "What form is it to take and how am I to do it to the best advantage?" With this end in view some of the essential features in connection with good newspaper advertising will be pointed out. In the first place it is very necessary that you describe in as much detail as possible the article which you are placing on sale. If you consult the advertisements of the men who have made their advertisements business getters you will find that the interest is whetted by telling all they know about the article in question. Some things of course will not permit of any very extended description, such as pocket knives. Take again an articles such as stoves. Here there is quite a scope for the dealer to tell all he knows about the stove he is advertising. There are marked differences in the way two merchants will treat the same subject of stoves. Reproduced herewith are two types of stove advertisements. In the one instance the advertisement brought results. In the other case no data is at hand to show whether or not the ad. paid. But in the one case it lacks that very necessary essential known as "punch." It fails to interest except in a very mild sort of way. Poetry is not usually the best means of telling what an article looks like. Poetry is the language of abstract ideas; it does not lend itself to the directness required in business conversation.

It is an attractive advertisement by reason of the cut of the stove, the border and the arrangement of the merchant's name. There is a good disposition of white space to show up and make the reading matter attractive.

But it lacks the punch and that breathing intimacy of the successful advertisement. One would imagine the product on sale was "Armco" non-rusting steel. In truth it is the Kootenay range which is being placed before the prospective buyers. The name Kootenay is one of the least conspicuous features about the advertisement. No prices are mentioned, nor is there any description of the stove to let the

Reproduction of a stove advertisement from a leading Western hardware firm which did bring results. The typographical display is good, the argument is convincing and it tells all the details an interested housewife could wish to know.

housewife get some mental picture of what the material and structure is. Of course the lack of these details is helped out greatly by the presence of an attractive cut. But how much more telling it would have been if supplemented by a concise description of the stove.

The above is a reproduction from one of the Ashdown Company's advertisements. Less space has been used in the telling and yet it is an advertisement which is known to have brought results.
